Comparable store sales growth describes the change in net sales in any period for stores that are considered comparable to the prior period. Comparable store sales include net sales at stores that have been open more than 13 months. A store becomes comparable the first calendar week it has sales after 13 months of being opened. Stores that have been renovated, relocated, or expanded are included in the comparable store sales calculation to the extent they had sales during comparable weeks in each year.

Net sales per square foot was calculated based on total sales for the year divided by the average selling square footage during the year, including the end of the fiscal year, the beginning of the fiscal year, and the end of each of the three interim fiscal quarters. Comparable store sales represent the change in sales attributable to stores open in both the current and prior years, whereas sales per square foot represents total net sales divided by the average total selling square footage. As a result, all stores are included in the sales per square foot calculation, including stores without a full year of sales.

Amounts in the following tables are in millions, except per share data, number of stores data and net sales per selling square foot data.
