-

Item 8.01 Other Events.

On September 9, 2015 Mirati Therapeutics, Inc. (the Company) presented data at the International Association of Lung Cancer 16th World Conference on Lung Cancer (the Conference) on the first non-small cell lung cancer (NSCLC) patient with *AXL* gene amplification enrolled in the MGCD265 Phase 1b expansion cohort. The data presented showed the patient had a confirmed Partial Response (PR) based on RECIST criteria. Additionally the Company provided an interim update on the ongoing MGCD265 Phase 1b expansion cohort disclosing that 2 of the 4 NSCLC patients who are currently evaluable (having had at least 1 on-treatment scan) have confirmed PRs based upon RECIST criteria including the patient with *AXL* amplification highlighted above and a patient with *MET* gene amplification. Both of the patients with confirmed PRs remain on study. As of September 1, 2015, 9 patients with genetic alterations in *Met* or *AXL* have been enrolled in the expansion cohort, including 7 with NSCLC and 2 with other solid tumors. Of the 9 patients enrolled 7 remain on study for up to 8+ months. The Company plans to provide a more in-depth update on this study when more data is available.

On September 9, 2015, the Company issued a press release announcing the data to be presented at the Conference. A copy of the press release is attached as Exhibit 99.1 hereto.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits.
