GOL Announces September 2009 Traffic Figures

São Paulo, October 5, 2009 GOL Linhas Aéreas Inteligentes S.A. (Bovespa: GOLL4 and NYSE: GOL), Latin America's largest low-cost and low-fare airline, announces its preliminary traffic figures for September 2009.

Management Comments

In September 2009, GOL recorded a **26.6% year-on-year growth in air traffic demand** due to the following factors: (i) the increased supply and improved distribution of seats due to the merger of GOL and VRG's operations in 4Q08; (ii) the continued revitalization of the SMILES program (Latin America's largest mileage program with more than 6.4 million members) and (iii) fiercer competition in the domestic market, with successive fare reductions that drove up demand sharply in September.

In this scenario, **domestic market demand moved up by 36.4%** over September 2008 and by 6.5% over August 2009. However, the factors behind this demand increase were partially offset by the fewer number of days in September compared to August. International demand dropped by 22.4% year-on-year due to the reduction in the supply of seats on less profitable international routes.

In comparison with August 2009, international demand rose by 21.1% due to the same factors that drove domestic demand and the recovery of traffic to Chile and Argentina, since the end of winter has led a substantial reduction in H1N1 flu cases.

On the capacity front, seating capacity per kilometer flown climbed by 8.7% over September 2008, mainly due to the expansion of the operating fleet and a **4.2% decline in consolidated capacity** in comparison with August 2009, due to the reduction in the supply of seats in the international market.

(*) September 2009 preliminary figures; September 2008 and August 2009 ANAC figures.

In line with its focus on optimizing operating profitability, the utilization ratio of GOL's operational fleet (measured in block hours) remained above 12 hours/day.

As a result of the highly competitive price scenario in the domestic market, at unsustainable levels, average net yield in September was around R\$17.00 cents, taking the quarterly yield to slightly to approximately R\$19.00 cents.

Despite the decrease in average net yield, the Company has maintained its operating cash generation in line with the two previous quarters.

(1) Available seat kilometers, or ASK, represents the aircraft seating capacity multiplied by the number of kilometers the seats are flown.

(2) Revenue passenger kilometers, or RPK, represents the number of kilometers flown by revenue passengers.

(3) Load factor represents the percentage of aircraft seating capacity that is actually utilized (calculated by dividing RPK by ASK).
