Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the fiscal year ended December 31, 2014

OR

Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the transition period from to .

Commission File Number 1-6028

LINCOLN NATIONAL CORPORATION

(Exact name of registrant as specified in its charter)

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Indiana (State or other jurisdiction of incorporation or organization)	35-1140070 (I.R.S. Employer Identification No.)
150 N. Radnor Chester Road, Suite A305, Radnor, Pennsylvania (Address of principal executive offices)	19087 (Zip Code)

Registrant's telephone number, including area code: (484) 583-1400

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered
Common Stock	New York
Warrants, each to purchase one share of common stock	New York

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. Large accelerated filer Accelerated filer Non-accelerated filer (Do not check if a smaller reporting company) Smaller reporting company

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the shares of the registrant's common stock held by non-affiliates (based upon the closing price of these shares on the New York Stock Exchange) as of the last business day of the registrant's most recently completed second fiscal quarter was \$13.4 billion.

As of February 18, 2015, 256,391,046 shares of common stock of the registrant were outstanding.

Documents Incorporated by Reference:

Selected portions of the Proxy Statement for the Annual Meeting of Shareholders, scheduled for May 21, 2015, have been incorporated by reference into Part III of this Form 10-K.

PART I

The “Business” section and other parts of this Form 10-K contain forward-looking statements that involve inherent risks and uncertainties. Statements that are not historical facts, including statements about our beliefs and expectations, and containing words such as “believes,” “estimates,” “anticipates,” “expects” or similar words are forward-looking statements. Our actual results may differ materially from the projected results discussed in the forward-looking statements. Factors that could cause such differences include, but are not limited to, those discussed in “Item 1A. Risk Factors” and in the “Forward-Looking Statements – Cautionary Language” in “Part II – Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” (“MD&A”) of the Form 10-K. Our consolidated financial statements and the accompanying notes to the consolidated financial statements (“Notes”) are presented in “Part II – Item 8. Financial Statements and Supplementary Data.”

Item 1. Business

OVERVIEW

Lincoln National Corporation (“LNC,” which also may be referred to as “Lincoln,” “we,” “our” or “us”) is a holding company, which operates multiple insurance and retirement businesses through subsidiary companies. Through our business segments, we sell a wide range of wealth protection, accumulation and retirement income products and solutions. These products include fixed and indexed annuities, variable annuities, universal life insurance (“UL”), variable universal life insurance (“VUL”), linked-benefit UL, term life insurance, indexed universal life insurance (“IUL”), employer-sponsored retirement plans and services, and group life, disability and dental. LNC was organized under the laws of the state of Indiana in 1968. We currently maintain our principal executive offices in Radnor, Pennsylvania. “Lincoln Financial Group” is the marketing name for LNC and its subsidiary companies. As of December 31, 2014, LNC had consolidated assets of \$253.4 billion and consolidated stockholders’ equity of \$15.7 billion.

We provide products and services and report results through four segments as follows:

Business Segments

Annuities

Retirement Plan Services

Life Insurance

Group Protection

We also have Other Operations, which includes the financial data for operations that are not directly related to the business segments.

The results of Lincoln Financial Network (“LFN”) and Lincoln Financial Distributors (“LFD”), our retail and wholesale distributors, respectively, are included in the segments for which they distribute products. LFD distributes our individual products and services, retirement plans and corporate-owned UL and VUL (“COLI”) and bank-owned UL and VUL (“BOLI”) products and services. The distribution occurs primarily through consultants, brokers, planners, agents, financial advisors, third-party administrators (“TPAs”) and other intermediaries. Group Protection distributes its products and services primarily through employee benefit brokers, TPAs and other employee benefit firms. As of December 31, 2014, LFD had approximately 610 internal and external wholesalers (including sales managers). As of December 31, 2014, LFN offered LNC and non-proprietary products and advisory services through a national network of approximately 8,460 active producers who placed business with us within the last 12 months.

Financial information in the tables that follow is presented in conformity with accounting principles generally accepted in the United States of America (“GAAP”), unless otherwise indicated. We provide revenues, income (loss) from operations and assets attributable to each of our business segments and Other Operations in Note 22. Assets, revenues and earnings attributable to foreign activities were not material in the periods presented.

Acquisitions and Dispositions

On July 25, 2011, Newton County Loan & Savings, FSB (“NCLS”), our wholly-owned subsidiary, submitted a voluntary plan of dissolution with the Officer of the Comptroller of the Currency (“OCC”). The OCC approved NCLS’s voluntary dissolution effective November 30, 2011.

On December 7, 2014, we entered into a stock purchase agreement with Entercom Communications Corp. (“Entercom Parent”) and Entercom Radio, LLC (“Entercom”), pursuant to which we agreed to sell Lincoln Financial Media Company, our media properties, to Entercom for \$105 million consisting of cash and perpetual cumulative convertible preferred stock of Entercom Parent. The transaction is subject to Federal Communications Commission, Hart-Scott-Rodino (“H-S-R”) and other customary regulatory approvals and closing conditions. As a result of a request for additional information under the H-S-R Act, closing may be delayed beyond the second quarter of 2015.

For further information about acquisitions and divestitures, see Note 3.

BUSINESS SEGMENTS AND OTHER OPERATIONS

ANNUITIES

Overview

The Annuities segment provides tax-deferred investment growth and lifetime income opportunities for its clients by offering fixed (including indexed) and variable annuities. The “fixed” and “variable” classifications describe whether we or the contract holders bear the investment risk of the assets supporting the contract. This also determines the manner in which we earn investment margin profits from these products, either as investment spreads for fixed products or as asset-based fees charged to variable products.

Annuities have several features that are attractive to customers. First, annuities are unique in that contract holders can select a variety of payout alternatives to help provide an income flow for life. Many annuity contracts include guarantee features (living and death benefits) that are not found in any other investment vehicle and, we believe, make annuities attractive especially in times of economic uncertainty. Second, annuities offer tax-deferred growth on the underlying principal, thereby deferring the tax consequences of the growth in value until withdrawals are made from the accumulation values, often at lower tax rates occurring during retirement.

Products

In general, an annuity is a contract between an insurance company and an individual or group in which the insurance company, after receipt of one or more premium payments, agrees to pay an amount of money either in one lump sum or on a periodic basis (i.e., annually, semi-annually, quarterly or monthly), beginning on a certain date and continuing for a period of time as specified in the contract or as requested. Periodic payments can begin within 12 months after the premium is received (referred to as an immediate annuity) or at a future date in time (referred to as a deferred annuity). This retirement vehicle helps protect an individual from outliving his or her money.

Variable Annuities

A variable annuity provides the contract holder the ability to direct the investment of premium deposits into one or more variable sub-accounts (“variable funds”) offered through the product (“variable portion”) and into a fixed account with a guaranteed return (“fixed portion”). The value of the variable portion of the contract holder’s account varies with the performance of the underlying variable funds chosen by the contract holder.

Our variable funds include the Managed Risk Strategies fund options, a series of funds that embed volatility risk management and, with some funds, capital protection strategies, inside the funds themselves. These funds, introduced in late 2011, seek to reduce equity market risk for both the contract holder and us. As of December 31, 2014 and 2013, the Managed Risk Strategies funds totaled \$28.7 billion and \$20.2 billion, or 28% and 21% of total variable annuity account values, respectively.

We charge mortality and expense assessments and administrative fees on variable annuity accounts to cover insurance and administrative expenses. These assessments are built into accumulation unit values, which when multiplied by the number of units owned for any variable fund equals the contract holder's account value for that variable fund. In addition, for some contracts, we impose surrender charges, which are typically applicable during the early years of the annuity contract, with a declining level of surrender charges over time.

We offer guaranteed benefit riders with certain of our variable annuity products, such as a guaranteed death benefit ("GDB"), a guaranteed withdrawal benefit ("GWB"), a guaranteed income benefit ("GIB") and a combination of such benefits.

The GDB features offered in 2014 included those where we contractually guarantee to the contract holder that upon death, depending on the particular product, we will return no less than: the current contract value; the total deposits made to the contract, adjusted to reflect any partial withdrawals; the highest contract value on a specified anniversary date adjusted to reflect any partial withdrawals following the contract anniversary; or the current contract value plus a specified percentage of contract earnings, not to exceed a covered earnings limit.

In 2014, we offered product riders including the Lincoln Lifetime IncomeSM Advantage 2.0 (Managed Risk) and Lincoln Lifetime IncomeSM Advantage 2.0 riders, which are hybrid benefit riders combining aspects of GWB and GIB. These benefit riders allow the contract holder the ability to take income at a maximum rate of up to 5% of the guaranteed amount when they are above the lifetime income age or income through i4LIFE[®] Advantage with the GIB. Lincoln Lifetime Income Advantage 2.0 (Managed Risk) and Lincoln Lifetime Income Advantage 2.0 riders provide higher income if the contract holder delays withdrawals, including both a 5% enhancement to the guaranteed amount each year a withdrawal is not taken for a specified period of time and an annual step-up of the guaranteed amount to the current contract value. Contract holders under Lincoln Lifetime Income Advantage 2.0 (Managed Risk) are subject to the allocation of their account value to our Managed Risk Strategies fund options and certain fixed-income options. Contract holders under Lincoln Lifetime Income Advantage 2.0 are subject to restrictions on the allocation of their account value within the various investment choices.

We also offered the i4LIFE[®] Advantage, i4LIFE[®] Advantage Guaranteed Income Benefit (Managed Risk) and i4LIFE[®] Advantage Guaranteed Income Benefit riders. These riders, which are covered by U.S. patents, allow variable annuity contract holders access and control during a portion of the income distribution phase of their contract. This added flexibility allows the contract holder to access the account value for transfers, additional withdrawals and other service features like portfolio rebalancing. In general, GIB is an optional

feature available with i4LIFE Advantage and a non-optional feature on i4LIFE Advantage Guaranteed Income Benefit (Managed Risk) and i4LIFE Advantage Guaranteed Income Benefit that guarantees regular income payments will not fall below the greater of a minimum income floor set at benefit issue and 75% of the highest income payment on a specified anniversary date (reduced for any subsequent withdrawals). Contract holders under i4LIFE Advantage Guaranteed Income Benefit (Managed Risk) are subject to the allocation of their account value to our Managed Risk Strategies fund options and certain fixed-income options. Contract holders under i4LIFE Advantage Guaranteed Income Benefit are subject to restrictions on the allocation of their account value within the various investment choices.

We also offered the 4LATER® Advantage (Managed Risk) rider. This rider provides a minimum income base used to determine the GIB floor when a client begins income payments under i4LIFE Advantage Guaranteed Income Benefit (Managed Risk). 4LATER Advantage (Managed Risk) rider provides growth during the accumulation phase through both a 5% enhancement to the income base each year a withdrawal is not taken for a specified period of time and an annual step-up of the income base to the current contract value. Contract holders under the 4LATER Advantage (Managed Risk) rider are subject to the allocation of their account value to our Managed Risk Strategies fund options and certain fixed-income options.

We design and actively manage the features and structure of our guaranteed benefit riders to maintain a competitive suite of products consistent with profitability and risk management goals. To mitigate the increased risks associated with guaranteed benefits, we developed a dynamic hedging program. The customized dynamic hedging program uses equity, interest rate and currency futures positions, interest rate and total return swaps and equity-based options depending upon the risks underlying the guarantees. For more information on our hedging program, see “Critical Accounting Policies and Estimates – Derivatives” and “Realized Gain (Loss) and Benefit Ratio Unlocking” in the MD&A. For information regarding risks related to guaranteed benefits, see “Item 1A. Risk Factors – Market Conditions – Changes in the equity markets, interest rates and/or volatility affect the profitability of our products with guaranteed benefits; therefore, such changes may have a material adverse effect on our business and profitability.”

In 2014, we also launched Lincoln Investor AdvantageSM, an investment-focused variable annuity product delivering tax efficient growth and income without associated guaranteed benefit riders.

Although we do not have any significant concentration of customers, our American Legacy Variable Annuity (“ALVA”) product is significant to this segment. The ALVA product accounted for 20%, 17% and 19% of our variable annuity product deposits in 2014, 2013 and 2012, respectively, and represented 44%, 47% and 50% of the segment’s total variable annuity product account values as of December 31, 2014, 2013 and 2012, respectively. In addition, fund choices for certain of our other variable annuity products offered include American Fund Insurance SeriesSM (“AFIS”) funds. AFIS funds accounted for 22%, 19% and 21% of variable annuity product deposits in 2014, 2013 and 2012, respectively, and represented 50%, 54% and 58% of the segment’s total variable annuity product account values as of December 31, 2014, 2013 and 2012, respectively.

Fixed Annuities

A fixed annuity preserves the principal value of the contract while guaranteeing a minimum interest rate to be credited to the accumulation value. Our fixed annuity product offerings as of December 31, 2014, consisted of traditional fixed-rate and fixed indexed deferred annuities, as well as fixed-rate immediate and deferred income annuities with various payment options, including lifetime incomes. Fixed annuity contracts are general account obligations. We bear the investment risk for fixed annuity contracts. To protect from premature withdrawals, we impose surrender charges. Surrender charges are typically applicable during the early years of the annuity contract, with a declining level of surrender charges over time. We expect to earn a spread between what we earn on the underlying general account investments supporting the fixed annuity product line and what we credit to our fixed annuity contract holders' accounts.

We offer single and flexible premium fixed deferred annuities. Single premium fixed deferred annuities are contracts that allow only a single premium to be paid. Flexible premium fixed deferred annuities are contracts that allow multiple premium payments on either a scheduled or non-scheduled basis.

Our traditional fixed-rate deferred annuity products include Lincoln ClassicSolutionSM Fixed Annuity, Lincoln SelectSM, Lincoln Smart CourseSM Fixed Annuity and Lincoln MYGuaranteeSM Plus Fixed Annuity. We also offer income annuities, including an immediate income annuity, Lincoln Insured IncomeSM Annuity, and deferred income annuities, Lincoln Deferred Income SolutionsSM Annuity and Lincoln Deferred Income PlannerSM Annuity.

Our fixed indexed deferred annuity products include Lincoln OptiPoint[®], Lincoln OptiChoiceSM, Lincoln New Directions[®] and Prime Income OptimizerTM. Our fixed indexed annuities provide the contract holder with interest crediting potential based on the performance of the Standard & Poor's ("S&P") 500 Index[®] ("S&P 500"). The indexed interest credit is guaranteed never to be less than zero. Available with certain of our fixed indexed annuities, Lincoln Lifetime IncomeSM Edge provides the contract holder a guaranteed lifetime withdrawal benefit. Withdrawals in excess of the free amount are assessed any applicable surrender charges, and the guaranteed withdrawal amount is recalculated. We use derivatives to hedge the equity market risk associated with our fixed indexed annuity products. For more information on our hedging program, see "Critical Accounting Policies and Estimates – Derivatives" and "Realized Gain (Loss) and Benefit Ratio Unlocking" in the MD&A.

Distribution

The Annuities segment distributes its individual fixed and variable annuity products through LFD. LFD's distribution channels give the Annuities segment access to its target markets. LFD distributes the segment's products to a large number of financial intermediaries, including LFN. The financial intermediaries include wire/regional firms, independent financial planners, financial institutions and managing general agents.

Competition

The annuities market is very competitive and consists of many companies, with no one company dominating the market for all products. The Annuities segment competes with numerous other financial services companies. The main factors upon which entities in this market compete are distribution channel access and the quality of wholesalers, investment performance, cost, product features, speed to market, brand recognition, financial strength ratings, crediting rates and client service.

RETIREMENT PLAN SERVICES

Overview

The Retirement Plan Services segment provides employers with retirement plan products and services, primarily in the defined contribution retirement plan marketplace. While our focus is employer-sponsored defined contribution plans, we also serve the defined benefit plan and individual retirement account ("IRA") markets. We provide a variety of plan investment vehicles, including individual and group variable annuities, group fixed annuities and mutual fund-based programs. We also offer a broad array of plan services including plan recordkeeping, compliance testing, participant education and trust and custodial services through our affiliated trust company, the Lincoln Financial Group Trust Company.

Defined contribution plans are a popular employee benefit offered by many employers across a wide spectrum of industries and by employers large and small. Retirement Plan Services primarily focuses on the mid to large market, which accounted for 52% of this segment's total assets under management as of December 31, 2014. In addition, Retirement Plan Services focuses on the small market 401(k) business, which accounted for 16% of this segment's total assets under management as of December 31, 2014.

Products and Services

The Retirement Plan Services segment currently brings three primary offerings to the employer-sponsored market: LINCOLN DIRECTORSSM group variable annuity, LINCOLN ALLIANCE[®] program and Multi-Fund[®] variable annuity. Retirement Plan Services also provides a series of IRA products, including the Lincoln Next Step[®] and the Lincoln Next Step SelectSM IRA. Additionally, in 2014 we introduced the Lincoln Secured Retirement IncomeSM, a new GWB product available through a group variable annuity contract.

LINCOLN DIRECTOR and Multi-Fund products are variable annuities. The LINCOLN ALLIANCE program is a mutual fund-based record-keeping platform. These offerings primarily cover the 403(b), 401(k) and 457 plan marketplace. The 403(b) plans are available to employees of educational institutions, not-for-profit healthcare organizations and certain other not-for-profit entities; 401(k) plans are generally available to employees of for-profit entities; and 457 plans are available to employees of not-for-profit entities and state and local government entities. The investment options for our annuities encompass the spectrum of asset classes with varying levels of risk and include both equity and fixed-income.

LINCOLN DIRECTOR group variable annuity is a 401(k) defined contribution retirement plan solution available to small businesses, typically those with plans having less than \$2 million in account values. The LINCOLN DIRECTOR product offers participants a broad array of investment options from several fund families and a fixed account. The Retirement Plan Services segment earns revenue through asset charges, investment management fees, surrender charges and recordkeeping fees from this product. We also receive fees from the underlying mutual fund companies for the services we provide, and we earn investment margins on assets in the fixed account.

The LINCOLN ALLIANCE program is a defined contribution retirement plan solution aimed at mid to large employers, typically those that have defined contribution plans with \$2 million or more in account value. The target market is primarily corporations, educational institutions, healthcare providers and public sector employers. The program bundles our traditional fixed annuity products with the employer's choice of mutual funds, along with recordkeeping, plan compliance services and customized employee education services. The program allows the use of any mutual fund. We earn fees for our recordkeeping and educational services and other services that we provide to plan sponsors and participants. We also earn investment margins on fixed annuities.

Multi-Fund Variable Annuity is a defined contribution retirement plan solution with full-bundled administrative services and investment choices for small- to mid-sized healthcare, education, governmental and not-for-profit plans. The product is available to the employer through the Multi-Fund group variable annuity contract or directly to the individual through the Multi-Fund Select variable annuity contract. We earn mortality and expense charges, investment income on the fixed account and surrender charges from this product. We also receive fees for services that we provide to funds in the underlying separate accounts.

The Lincoln Next Step series of products is a suite of mutual fund-based IRAs available exclusively for participants in Lincoln-serviced retirement plans and their spouses. The products can accept rollovers and transfers from other providers as well as ongoing

contributions. The Lincoln Next Step IRA product has no annual account charges and offers an array of mutual fund investment options provided by 20 fund families all offered at net asset value. The Lincoln Next Step Select IRA has an annual record keeping charge and offers an even wider array of mutual fund investment options from more than 20 families, all at net asset value. We earn 12b-1 and service fees on the mutual funds within the product.

In 2014, Retirement Plan Services developed and launched the Lincoln Secured Retirement IncomeSM product, a GWB available through group variable annuity contracts.

Distribution

Retirement Plan Services products are primarily distributed in two ways: through our Institutional Retirement Distribution team and by LFD. Wholesalers distribute these products through advisors, consultants, banks, wirehouses, TPAs and individual planners. We expanded the distribution of the segment's products by growing the number of wholesalers as of the end of 2014 to 71 and also by other means including continuing to increase relationship management expertise and growing the number of broker-dealer relationships.

The Multi-Fund[®] program is sold primarily by affiliated advisors. The LINCOLN ALLIANCE[®] program is sold primarily through consultants, registered independent advisors, and both affiliated and non-affiliated financial advisors, planners and wirehouses. LINCOLN DIRECTORSSM group variable annuity is sold in the small marketplace by intermediaries, including financial advisors, TPAs, planners and wirehouses.

Competition

The retirement plan marketplace is very competitive and is comprised of many providers with no one company dominating the market for all products. As stated above, we compete in the small, mid and large markets. We compete with numerous other financial services companies. The main factors upon which entities in this market compete are distribution channel access and the quality of wholesalers, investment performance, cost, product features, speed to market, brand recognition, financial strength ratings, crediting rates, client service and client compliance and fiduciary services.

LIFE INSURANCE

Overview

The Life Insurance segment focuses on the creation and protection of wealth for its clients by providing life insurance products, including term insurance, both single (including COLI and BOLI) and survivorship versions of UL, VUL and IUL products, a linked-benefit product (which is UL with riders providing for long-term care costs) and a critical illness rider, which can be attached to UL, VUL or IUL policies. Some of our products include secondary guarantees, which are discussed more fully below.

Generally, this segment has higher sales during the second half of the year with the fourth quarter being the strongest.

Mortality margins, morbidity margins, investment margins, expense margins and surrender fees drive life insurance profits. Mortality margins, morbidity margins, and some expense assessments are a function of the rates priced into the product and level of insurance in force. Insurance in force, in turn, is driven by sales, persistency and mortality experience.

Similar to the annuity product classifications described above, life products can be classified as “fixed” (including indexed) or “variable” contracts. This classification describes whether we or the contract holders bear the investment risk of the assets supporting the policy. This also determines the manner in which we earn investment margin profits from these products, either as investment spreads for fixed products or as asset-based fees charged to variable products.

Products

We offer four categories of life insurance products consisting of:

Interest-Sensitive Life Insurance

Interest-sensitive life insurance products provide life insurance with account values that earn rates of return based on company-declared interest rates. Contract holder account values are invested in our general account investment portfolio, so we bear the risk of investment performance.

In a UL contract, contract holders typically have flexibility in the timing and amount of premium payments and the amount of death benefit, provided there is sufficient account value to cover all policy charges for mortality and expenses for the coming period. Under certain contract holder options and market conditions, the death benefit amount may increase or decrease. Premiums received on a UL product, net of expense loads and charges, are added to the contract holder’s account value. The client has access to their account value (or a portion thereof), less surrender charges and policy loan payoffs, through contractual liquidity features such as loans, partial withdrawals and full

surrenders. Loans and withdrawals reduce the death benefit amount payable and are limited to certain contractual maximums (some of which are required under state law), and interest is charged on all loans. Our UL contracts assess surrender charges

5

against the policies' account values for full or partial surrenders and certain policy changes that occur during the contractual surrender charge period. Depending on the product selected, surrender charge periods can range from 0 to 25 years.

We also offer fixed IUL products that function similarly to a traditional UL policy, with the added flexibility of allowing contract holders to have portions of their account values earn credits based on the performance of indexes such as the S&P 500 or the 10-year Treasury yield.

As mentioned previously, we offer survivorship versions of our individual UL and IUL products. These products insure two lives with a single policy and pay death benefits upon the second death.

Reserves on UL products with secondary guarantees represented approximately 30% of total life reserves for the years ended December 31, 2014 and 2013, respectively. A UL policy with a secondary guarantee can stay in force, even if the base policy cash value is zero, as long as secondary guarantee requirements have been met. The secondary guarantee requirement is based on the payment of a required minimum premium or on the evaluation of a reference value within the policy, calculated in a manner similar to the base policy account value, but using different assumptions as to expense charges, cost of insurance charges and credited interest. The assumptions for the secondary guarantee requirement are listed in the contract. As long as the contract holder funds the policy to a level that keeps this calculated reference value positive, the death benefit will be guaranteed. The reference value has no actual monetary value to the contract holder; it is only a calculated value used to determine whether or not the policy will lapse should the base policy cash value be less than zero.

Our secondary guarantee benefits maintain the flexibility of a traditional UL policy, which allows a contract holder to take loans or withdrawals. Although loans and withdrawals are likely to shorten the time period of the GDB, the guarantee is not automatically or completely forfeited. The length of the guarantee may be increased at any time through additional excess premium deposits.

VUL

VUL products are UL products that provide a return on account values linked to an underlying investment portfolio of variable funds offered through the product. The value of the contract holder's account varies with the performance of the variable funds chosen by the contract holder. As the return on the investment portfolio increases or decreases, the account value of the VUL policy will increase or decrease. As with fixed UL products, contract holders have access, within contractual maximums, to account values through loans, withdrawals and surrenders. Surrender charges are assessed during the surrender charge period, ranging from 0 to 20 years depending on the product.

In addition, VUL products offer a fixed account option that is managed by us. Investment risk is borne by the customer on all but the fixed account option.

We also offer survivorship versions of our individual VUL products. These products insure two lives with a single policy and pay death benefits upon the second death. Our COLI products are also VUL-type products.

Linked-Benefit Life Products and Products with Critical Illness Riders

Linked-benefit life products combine UL with long-term care insurance through the use of riders. One type of rider allows the contract holder to accelerate death benefits on a tax-free basis in the event of a qualified long-term care need, reducing the remaining death benefit. Another rider extends the long-term care insurance benefits for an additional period of time if the death benefit is fully accelerated. Certain policies also provide a reduced death benefit to the contract holder's beneficiary if the death benefit has been fully accelerated as long-term care benefits during the contract holder's life.

Some life products provide for critical illness insurance by the use of riders attached to UL, VUL or IUL policies. These riders allow the contract holder to accelerate death benefits on a tax-free basis in the event of a qualified critical illness condition.

Term Life Insurance

Term life insurance provides a fixed death benefit for a scheduled period of time. Some of our term life insurance products give the policy holder the option to reduce the death benefit at a future time. They usually do not offer cash values. Scheduled policy premiums are required to be paid at least annually.

Distribution

The Life Insurance segment's products are sold through LFD. LFD provides the Life Insurance segment with access to financial intermediaries in the following primary distribution channels: wire/regional firms; independent planner firms (including LFN); financial institutions; and managing general agents/independent marketing organizations. LFD distributes COLI and BOLI products and services to small- to mid-sized banks and mid- to large-sized corporations, primarily through 28 intermediaries who specialize in one or both of these markets and who are serviced through a network of internal and external LFD sales professionals.

Competition

The life insurance industry is very competitive and consists of many companies with no one company dominating the market for all products. As of the end of 2013, the latest year for which data is available, there were 850 life insurance companies in the U.S. and U.S. territories, according to the American Council of Life Insurers.

The Life Insurance segment primarily targets the affluent to high net worth markets, defined as households with at least \$1 million of financial assets. For those individual policies we sold in 2014, the average face amount (excluding MoneyGuard® products) was approximately \$1 million and average first year premiums paid were approximately \$20,000. The Life Insurance segment competes primarily on product design and customer service. With respect to customer service, management tracks the speed, accuracy and responsiveness of service to customers' calls and transaction requests. Further, management tracks the turnaround time and quality for various client services such as processing of applications. Additional competitive factors relevant to the Life Insurance segment include product breadth, speed to market, underwriting and risk management, financial strength ratings and extent of distribution network.

Underwriting

In the context of life insurance, underwriting is the process of evaluating medical and non-medical information about an individual and determining the effect these factors statistically have on mortality. This process of evaluation is often referred to as risk classification. Of course, no one can accurately predict how long any individual will live, but certain risk factors can affect life expectancy and are evaluated during the underwriting process.

Claims Administration

Claims services are handled in-house, and claims examiners are assigned to each claim notification based on coverage amount, type of claim and the experience of the examiner. Claims meeting certain criteria are referred to senior claims examiners. A formal quality assurance program is carried out to ensure the consistency and effectiveness of claims examining activities. A network of in-house legal counsel, compliance officers, medical personnel and an anti-fraud investigative unit also support claims examiners. A special team of claims examiners, in conjunction with claims management, focus on more complex claims matters such as claims incurred during the contestable period, beneficiary disputes and litigated claims.

GROUP PROTECTION

Overview

The Group Protection segment offers group non-medical insurance products, principally term life, disability and dental, to the employer marketplace through various forms of employee-paid and employer-paid plans. Although the majority of the segment's group contracts are sold to employers with fewer than 500 employees, we may target some products specifically to employers with greater than 500 employees. For additional information on our employee-paid and employer-paid business, see "Results of Group Protection – Income (Loss) from Operations" in the MD&A.

Products

Life Insurance

We offer employer-sponsored group term life insurance products including basic, optional and voluntary term life insurance to employees and their dependents. Additional benefits may be provided in the event of a covered individual's accidental death or dismemberment.

We also offer employer-sponsored universal life insurance for employees and their covered dependents. The universal life product is purchased on an employee paid basis.

Group Disability Insurance

We offer short- and long-term employer-sponsored group disability insurance, which protects an employee against loss of wages due to illness or injury. Short-term disability generally provides benefits for up to 26 weeks following a short waiting period, ranging from 1 to 30 days. Long-term disability provides benefits following a longer waiting period, usually between 30 and 180 days and provides benefits for a longer period, at least 2 years and typically extending to normal (Social Security) retirement age. The benefits paid are subject to Social Security offsets.

Group Dental, Vision and Medical

We offer a variety of employer-sponsored group dental insurance plans, which cover a portion of the cost of eligible dental procedures for employees and their dependents. Products offered include indemnity coverage, which does not distinguish benefits based on a dental provider's participation in a network arrangement, and a Preferred Provider Organization ("PPO") product that does reflect the dental provider's participation in the PPO network arrangement, including an agreement with network fee schedules.

We offer comprehensive employer-sponsored fully-insured vision plans with a wide range of benefits for protecting covered members' sight and vision health. All plans provide access to a national network of providers, with in- and out-of-network benefits.

Accident and Critical Illness Insurance

We offer employer-sponsored group accident insurance products for employees and their covered dependents. This product is predominantly purchased on an employee-paid basis. Accident insurance provides scheduled benefits for over 30 types of benefit triggers related to accidental causes, and it is available for non-occupational accidents exclusively or on a 24-hour coverage basis.

We offer employer-sponsored group critical illness insurance to employees and their covered dependents. This product is predominantly purchased on an employee-paid basis. The coverage provides for lump sum payouts upon the occurrence of one of the specified critical illness benefit triggers covered within a critical illness insurance policy. This product also includes Lincoln CareCompassSM, a package of benefits and services that assists employees and their family members in prevention, early detection and treatment of critical illness events.

Distribution

The segment's products are marketed primarily through a national distribution system, including approximately 180 managers and marketing representatives. The managers and marketing representatives develop business through employee benefit brokers, TPAs and other employee benefit firms that work with employers to provide access to our products.

Competition

The group protection marketplace is very competitive. Principal competitive factors include particular product features, price, quality of customer service and claims management, technological capabilities and financial strength ratings. In this market, the Group Protection segment competes with a limited number of major companies and selected other companies that focus on these products.

Underwriting

The Group Protection segment's underwriters evaluate the risk characteristics of each employee group. Generally, the relevant characteristics evaluated include employee census information (such as age, gender, income and occupation), employer industry classification, geographic location, benefit design elements and other factors. The segment employs detailed underwriting policies, guidelines and procedures designed to assist the underwriter to properly assess and quantify risks. The segment uses technology to efficiently review, price and issue smaller cases, utilizing its underwriting staff on larger, more complex cases. Individual underwriting techniques (including evaluation of individual medical history information) may be used on certain covered individuals selecting larger benefit amounts. For voluntary and other forms of employee paid coverages, minimum participation requirements are used to obtain a better spread of risk and minimize the risk of anti-selection.

Claims Administration

Claims for the Group Protection segment are managed by in-house claim specialists and outsourced third-party resources. Claims are evaluated for eligibility and payment of benefits pursuant to the group insurance contract and in compliance with federal and state regulations. Disability claims management is especially important to segment results, as results depend on both the incidence and the length of approved disability claims. In July 2014, Group Protection introduced a new claims management system and is continuing to work through its implementation. The segment employs a variety of clinical experts, including internal and external medical professionals and rehabilitation specialists, to evaluate medically supported functional capabilities, assess employability and develop return to work plans. Dental claims management focuses on assisting plan administrators and members with the rising costs of insurance by utilizing tools to optimize dental claims payment accuracy through advanced claims review and validation, improved data analysis, enhanced clinical review of claims and provider utilization monitoring.

OTHER OPERATIONS

Other Operations includes the financial data for operations that are not directly related to the business segments. Other Operations includes investments related to the excess capital in our insurance subsidiaries; corporate investments; benefit plan net liability; the unamortized deferred gain on indemnity reinsurance related to the sale to Swiss Re Life & Health America, Inc. ("Swiss Re") in 2001; the results of certain disability income business; our run-off Institutional Pension business in the form of group annuity and insured funding-type of contracts; and debt. Other Operations also includes our investment in media properties. In December 2014, we entered into a stock purchase agreement to sell our media properties to Entercom as described above.

REINSURANCE

We follow the industry practice of reinsuring a portion of our life insurance and annuity risks with unaffiliated reinsurers. In a reinsurance transaction, a reinsurer agrees to indemnify another insurer for part or all of its liability under a policy or policies it has issued for an agreed upon premium. We use reinsurance to protect our insurance subsidiaries against the severity of losses on individual claims and unusually serious occurrences in which a number of claims produce an aggregate extraordinary loss. Although reinsurance does not discharge the insurance subsidiaries from their primary liabilities to their contract holders for losses insured under the insurance policies, it does make the assuming reinsurer liable to the insurance subsidiaries for the reinsured portion of the risk. Because we bear the risk of nonpayment by one or more of our reinsurers, we primarily cede reinsurance to well-capitalized, highly rated reinsurers.

We reinsure approximately 25% of the mortality risk on newly issued life insurance contracts. As of December 31, 2014, our policy for this program was to retain no more than \$20 million on a single insured life.

Portions of our deferred annuity business have been reinsured on a modified coinsurance (“Modco”) basis with other companies to limit our exposure to interest rate risks. In a Modco program, the reinsurer shares proportionally in all financial terms of the reinsured policies (i.e., premiums, expenses, claims, etc.) based on their respective quota share of the risk.

In addition, we acquire other reinsurance to cover products other than as discussed above with retentions and limits that management believes are appropriate for the circumstances.

We obtain reinsurance from a diverse group of reinsurers, and we monitor concentration and financial strength ratings of our principal reinsurers. Swiss Re represents our largest reinsurance exposure. The amounts recoverable from reinsurers were \$5.7 billion and \$6.0 billion as of December 31, 2014 and 2013, respectively, of which \$2.5 billion and \$2.6 billion were recoverable from Swiss Re related to the sale of our reinsurance business to Swiss Re for the respective periods.

We also utilize inter-company reinsurance agreements to manage our statutory capital position as well as our hedge program for variable annuity guarantees. These inter-company agreements do not have an effect on our consolidated financial statements.

For more information regarding reinsurance, see “Reinsurance” in the MD&A and Note 9. For risks involving reinsurance, see “Item 1A. Risk Factors – Operational Matters – We face risks of non-collectability of reinsurance and

increased reinsurance rates, which could materially affect our results of operations.”

RESERVES

The applicable insurance laws under which insurance companies operate require that they report, as liabilities, policy reserves to meet future obligations on their outstanding policies. These reserves are the amounts that, with the additional premiums to be received and interest thereon compounded annually at certain assumed rates, are calculated to be sufficient to meet the various policy and contract obligations as they mature. These laws specify that the reserves shall not be less than reserves calculated using certain specified mortality and morbidity tables, interest rates and methods of valuation.

For more information on reserves, see “Critical Accounting Policies and Estimates – Derivatives” and “Critical Accounting Policies and Estimates – Future Contract Benefits and Other Contract Holder Obligations” in the MD&A.

See “Regulatory” below for information on permitted practices and proposed regulations that may impact the amount of statutory reserves necessary to support our current insurance liabilities.

For risks related to reserves, see “Item 1A. Risk Factors – Market Conditions – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals.”

INVESTMENTS

An important component of our financial results is the return on invested assets. Our investment strategy is to balance the need for current income with prudent risk management, with an emphasis on generating sufficient current income to meet our obligations. This approach requires the evaluation of risk and expected return of each asset class utilized, while still meeting our income objectives. This approach also permits us to be more effective in our asset-liability management because decisions can be made based upon both the economic and current investment income considerations affecting assets and liabilities. Investments by our insurance subsidiaries must comply with the insurance laws and regulations of the states of domicile.

Derivatives are used primarily for hedging purposes and, to a lesser extent, income generation. Hedging strategies are employed for a number of reasons including, but not limited to, hedging certain portions of our exposure to changes in our GDB, GWB and GIB liabilities, interest rate fluctuations, the widening of bond yield spreads over comparable maturity U.S. government obligations and credit, foreign exchange and equity risks. Income generation strategies

include credit default swaps through replication synthetic asset transactions. These derivatives synthetically create exposure in the general account to corporate debt, similar to investing in the credit markets.

9

For additional information on our investments, including carrying values by category, quality ratings and net investment income, see “Consolidated Investments” in the MD&A, as well as Notes 1 and 5.

FINANCIAL STRENGTH RATINGS

The Nationally Recognized Statistical Ratings Organizations rate the financial strength of our principal insurance subsidiaries.

Rating agencies rate insurance companies based on financial strength and the ability to pay claims, factors more relevant to contract holders than investors. We believe that the ratings assigned by nationally recognized, independent rating agencies are material to our operations. There may be other rating agencies that also rate our insurance companies, which we do not disclose in our reports.

Insurer Financial Strength Ratings

The insurer financial strength rating scales of A.M. Best, Fitch Ratings (“Fitch”), Moody’s Investors Service (“Moody’s”) and S&P are characterized as follows:

- A.M. Best – A++ to S
- Fitch – AAA to C
- Moody’s – Aaa to C
- S&P – AAA to D

As of February 18, 2015, the financial strength ratings of our principal insurance subsidiaries, as published by the principal rating agencies that rate us were as follows:

	A.M. Best	Fitch	Moody's	S&P
Insurer Financial Strength Ratings				
The Lincoln National Life Insurance Company ("LNL")	A+ (2nd of 16)	A+ (5th of 19)	A1 (5th of 21)	AA- (4th of 22)

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Lincoln Life & Annuity Company of New York ("LLANY")	A+ (2nd of 16)	A+ (5th of 19)	A1 (5th of 21)	AA- (4th of 22)
First Penn-Pacific Life Insurance Company ("FPP")	A (3rd of 16)	A+ (5th of 19)	A1 (5th of 21)	A- (7th of 22)

A downgrade of the financial strength rating of one of our principal insurance subsidiaries could affect our competitive position in the insurance industry and make it more difficult for us to market our products, as potential customers may select companies with higher financial strength ratings. Ratings are not recommendations to buy our securities.

All of our financial strength ratings are on outlook stable. All of our ratings are subject to revision or withdrawal at any time by the rating agencies, and therefore, no assurance can be given that our principal insurance subsidiaries can maintain these ratings. Each rating should be evaluated independently of any other rating. See "Review of Consolidated Financial Condition – Liquidity and Capital Resources – Sources of Liquidity and Cash Flow" in the MD&A for a discussion of our credit ratings.

REGULATORY

Insurance Regulation

Our insurance subsidiaries, like other insurance companies, are subject to regulation and supervision by the states, territories and countries in which they are licensed to do business. The extent of such regulation varies, but generally has its source in statutes that delegate regulatory, supervisory and administrative authority to supervisory agencies. In the U.S., this power is vested in state insurance departments.

In supervising and regulating insurance companies, state insurance departments, charged primarily with protecting contract holders and the public rather than investors, enjoy broad authority and discretion in applying applicable insurance laws and regulation for that purpose. Our principal insurance subsidiaries, LNL, LLANY and FPP, are domiciled in the states of Indiana, New York and Indiana, respectively.

The insurance departments of the domiciliary states exercise principal regulatory jurisdiction over our insurance subsidiaries. The extent of regulation by the states varies, but in general, most jurisdictions have laws and regulations governing standards of solvency, adequacy of reserves, reinsurance, capital adequacy, licensing of companies and agents to transact business, prescribing and approving policy forms, regulating premium rates for some lines of business, prescribing the form and content of financial statements and reports, regulating the

type and amount of investments permitted and standards of business conduct. Insurance company regulation is discussed further under “Insurance Holding Company Regulation” and “Restrictions on Subsidiaries’ Dividends and Other Payments.”

As part of their regulatory oversight process, state insurance departments conduct periodic, generally once every three to five years, examinations of the books, records, accounts and business practices of insurers domiciled in their states. During the three-year period ended December 31, 2014, we have not received any material adverse findings resulting from state insurance department examinations of our insurance subsidiaries conducted during this period.

State insurance laws and regulations require our U.S. insurance companies to file financial statements with state insurance departments everywhere they do business, and the operations of our U.S. insurance companies and accounts are subject to examination by those departments at any time. Our U.S. insurance companies prepare statutory financial statements in accordance with accounting practices and procedures prescribed or permitted by these departments. The National Association of Insurance Commissioners (“NAIC”) has approved a series of statutory accounting principles that have been adopted, in some cases with minor modifications, by virtually all state insurance departments. Changes in these statutory accounting principles can significantly affect our capital and surplus. The New York State Department of Financial Services (“NYDFS”) does not recognize the NAIC revisions to Actuarial Guideline 38 (“AG38”) in applying New York law governing the reserves to be held for UL and VUL products containing secondary guarantees. The change, which was effective as of December 31, 2013, impacts our New York-domiciled insurance subsidiary, LLANY. LLANY discontinued the sale of these products in early 2013, but the change affects those policies sold prior to that time. We began phasing in the increase in reserves over five years beginning in 2013. As of December 31, 2014, we have increased reserves by \$180 million. The additional increase in reserves over the next three years is subject to ongoing discussions with the NYDFS. However, we do not expect the amount for each of the remaining years to exceed \$90 million per year. We do not expect the total reserve increase to have a material adverse effect on our financial condition. See “Item 1A. Risk Factors – Legislative, Regulatory and Tax – Attempts to mitigate the impact of Regulation XXX and Actuarial Guideline 38 may fail in whole or in part resulting in an adverse effect on our financial condition and results of operations.”

Currently, insurance companies are using a variety of captive reinsurance structures to support their respective businesses. The NAIC through its various committees, task forces and working groups has been studying the use of captives and special purpose vehicles to transfer insurance risk and has been evaluating the adequacy of existing NAIC model laws and regulations applicable to captives. Recently, the NAIC adopted new Actuarial Guideline 48 (“AG48”) that provides additional restrictions on the type and quality of assets that may be used to support reinsurance transactions on business covered by the Valuation of Life Insurance Policies Model Regulation (“XXX”) and AG38 effective for new transactions on or after January 1, 2015. Failure to comply with these requirements will generally result in the appointed actuary being required to issue a qualified actuarial opinion with regard to that reinsurance transaction. Pre-existing reinsurance arrangements will not be affected by AG48 unless they are modified in certain specified ways on or after January 1, 2015.

For more information on statutory reserving and our use of captive reinsurance structures, see “Review of Consolidated Financial Condition – Liquidity and Capital Resources” in the MD&A.

Insurance Holding Company Regulation

LNC and its primary insurance subsidiaries are subject to regulation pursuant to the insurance holding company laws of the states of Indiana and New York. These insurance holding company laws generally require an insurance holding company and insurers that are members of such insurance holding company's system to register with the insurance department authorities, to file with it certain reports disclosing information, including their capital structure, ownership, management, financial condition and certain inter-company transactions, including material transfers of assets and inter-company business agreements and to report material changes in that information. These laws also require that inter-company transactions be fair and reasonable and, under certain circumstances, prior approval of the insurance departments must be received before entering into an inter-company transaction. Further, these laws require that an insurer's contract holders' surplus following any dividends or distributions to shareholder affiliates is reasonable in relation to the insurer's outstanding liabilities and adequate for its financial needs.

In general, under state holding company regulations, no person may acquire, directly or indirectly, a controlling interest in our capital stock unless such person, corporation or other entity has obtained prior approval from the applicable insurance commissioner for such acquisition of control. Pursuant to such laws, in general, any person acquiring, controlling or holding the power to vote, directly or indirectly, 10% or more of the voting securities of an insurance company, is presumed to have "control" of such company. This presumption may be rebutted by a showing that control does not exist in fact. The insurance commissioner, however, may find that "control" exists in circumstances in which a person owns or controls a smaller amount of voting securities. To obtain approval from the insurance commissioner of any acquisition of control of an insurance company, the proposed acquirer must file with the applicable commissioner an application containing information regarding: the identity and background of the acquirer and its affiliates; the nature, source and amount of funds to be used to carry out the acquisition; the financial statements of the acquirer and its affiliates; any potential plans for disposition of the securities or business of the insurer; the number and type of securities to be acquired; any contracts with respect to the securities to be acquired; any agreements with broker-dealers; and other matters.

Other jurisdictions in which our insurance subsidiaries are licensed to transact business may have similar or additional requirements for prior approval of any acquisition of control of an insurance or reinsurance company licensed or authorized to transact business in those jurisdictions. Additional requirements in those jurisdictions may include re-licensing or subsequent approval for renewal of existing

licenses upon an acquisition of control. As further described below, laws that govern the holding company structure also govern payment of dividends to us by our insurance subsidiaries.

Restrictions on Subsidiaries' Dividends and Other Payments

We are a holding company that transacts substantially all of our business directly and indirectly through subsidiaries. Our primary assets are the stock of our operating subsidiaries. Our ability to meet our obligations on our outstanding debt and to pay dividends and our general and administrative expenses depends on the surplus and earnings of our subsidiaries and the ability of our subsidiaries to pay dividends or to advance or repay funds to us.

Our insurance subsidiaries are subject to certain insurance department regulatory restrictions as to the transfer of funds and payment of dividends to the holding company. Under Indiana laws and regulations, our Indiana insurance subsidiaries, including our primary insurance subsidiary, LNL, may pay dividends to LNC without prior approval of the Indiana Insurance Commissioner (the "Commissioner"), only from unassigned surplus or must receive prior approval of the Commissioner to pay a dividend if such dividend, along with all other dividends paid within the preceding 12 consecutive months, would exceed the statutory limitation. The current statutory limitation is the greater of 10% of the insurer's contract holders' surplus, as shown on its last annual statement on file with the Commissioner or the insurer's statutory net gain from operations for the previous 12 months, but in no event to exceed statutory unassigned surplus. Indiana law gives the Commissioner broad discretion to disapprove requests for dividends in excess of these limits. LNL's subsidiary, LLANY, a New York-domiciled insurance company, has similar restrictions, except that in New York it is the lesser of 10% of surplus to contract holders as of the immediately preceding calendar year or net gain from operations for the immediately preceding calendar year, not including realized capital gains.

Indiana law also provides that following the payment of any dividend, the insurer's contract holders' surplus must be reasonable in relation to its outstanding liabilities and adequate for its financial needs, and permits the Commissioner to bring an action to rescind a dividend that violates these standards. In the event the Commissioner determines that the contract holders' surplus of one subsidiary is inadequate, the Commissioner could use his or her broad discretionary authority to seek to require us to apply payments received from another subsidiary for the benefit of that insurance subsidiary. For information regarding dividends paid to us during 2014 from our insurance subsidiaries, see "Review of Consolidated Financial Condition – Liquidity and Capital Resources – Sources of Liquidity and Cash Flow" in the MD&A.

Risk-Based Capital

The NAIC has adopted risk-based capital ("RBC") requirements for life insurance companies to evaluate the adequacy of statutory capital and surplus in relation to investment and insurance risks. The requirements provide a means of measuring the minimum amount of statutory surplus appropriate for an insurance company to support its overall business operations based on its size and risk profile. There are five major risks involved in determining the requirements:

Category	Name	Description
Asset risk – affiliates	C-0	Risk of assets' default for certain affiliated investments
Asset risk – others	C-1	Risk of assets' default of principal and interest or fluctuation in fair value Risk of underestimating liabilities from business already written or inadequately
Insurance risk	C-2	pricing business to be written in the future
Interest rate risk, health credit risk and market risk	C-3	Risk of losses due to changes in interest rate levels, risk that health benefits prepaid to providers become the obligation of the health insurer once again and risk of loss due to changes in market levels associated with variable products with guarantees
Business risk	C-4	Risk of general business

A company's risk-based statutory surplus is calculated by applying factors and performing calculations relating to various asset, premium, claim, expense and reserve items. Regulators can then measure adequacy of a company's statutory surplus by comparing it to the RBC determined by the formula. Under RBC requirements, regulatory compliance is determined by the ratio of a company's total adjusted capital, as defined by the NAIC, to its company action level of RBC (known as the RBC ratio), also as defined by the NAIC. Accordingly, factors that have an impact on the total adjusted capital of our insurance subsidiaries, such as the permitted practices discussed above, will also affect their RBC levels.

Four levels of regulatory attention may be triggered if the RBC ratio is insufficient:

- "Company action level" – If the RBC ratio is between 75% and 100%, then the insurer must submit a plan to the regulator detailing corrective action it proposes to undertake;
- "Regulatory action level" – If the RBC ratio is between 50% and 75%, then the insurer must submit a plan, but a regulator may also issue a corrective order requiring the insurer to comply within a specified period;
- "Authorized control level" – If the RBC ratio is between 35% and 50%, then the regulatory response is the same as at the "Regulatory action level," but in addition, the regulator may take action to rehabilitate or liquidate the insurer; and
- "Mandatory control level" – If the RBC ratio is less than 35%, then the regulator must rehabilitate or liquidate the insurer.

As of December 31, 2014, the RBC ratios of LNL, LLANY and FPP reported to their respective states of domicile and the NAIC all exceeded the “company action level.” We believe that we will be able to maintain the RBC ratios of our insurance subsidiaries in excess of “company action level” through prudent underwriting, claims handling, investing and capital management. However, no assurances can be given that developments affecting the insurance subsidiaries, many of which could be outside of our control, will not cause the RBC ratios to fall below our targeted levels. These developments may include, but may not be limited to: changes to the manner in which the RBC ratio is calculated; new regulatory requirements for calculating reserves, such as principles-based reserving; economic conditions leading to higher levels of impairments of securities in our insurance subsidiaries’ general accounts; and an inability to finance life reserves including the issuing of letters of credit (“LOCs”) supporting inter-company reinsurance structures.

See “Item 1A. Risk Factors – Liquidity and Capital Position – A decrease in the capital and surplus of our insurance subsidiaries may result in a downgrade to our credit and insurer financial strength ratings.”

Privacy Regulations

In the course of our business, we collect and maintain personal data from our customers including personally identifiable non-public financial and health information, which subjects us to regulation under federal and state privacy laws. These laws require that we institute certain policies and procedures in our business to safeguard this information from improper use or disclosure. While we employ a robust and tested information security program, if the federal or state regulators establish further regulations for addressing customer privacy, we may need to amend our policies and adapt our internal procedures.

Federal Initiatives

The U.S. federal government does not directly regulate the insurance industry; however, federal initiatives from time to time can impact the insurance industry.

Financial Reform Legislation

Since it was enacted in 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”) has imposed considerable reform in the financial services industry. The ongoing implementation continues to present challenges and uncertainties for financial market participants.

For instance, the Dodd-Frank Act imposes significant changes to the regulation of derivatives transactions, which we use to mitigate many types of risk in our business. The new regulations require clearing and centralized execution for many derivatives transactions that have historically been conducted over-the-counter. In mid-2013, we began clearing swaps subject to a clearing mandate without significant consequences to our business other than the posting of initial margin and the attendant transaction costs of clearing. However, the use of swap execution facilities in the U.S. and the continuing disharmonization across international regulatory efforts appear to be creating market fragmentation leading in some cases to decreased liquidity and increased price volatility. Whether these trends will continue or become pervasive, and their ultimate impact on our business, remains uncertain. Additionally, U.S. banking regulators and the Commodity Futures Trading Commission are currently considering final rules for margin on uncleared swaps. The rules proposed in the U.S. are in some cases more restrictive than those advocated in the international context. The proposed rules contemplate that, likely beginning in 2019, U.S. insurers will be required to post initial margin in support of their uncleared swaps activity, which neither we nor our industry peers have typically been required to do. Additionally, the new rules limit eligible margin to a narrow range of assets (in some cases, to only cash). The full implementation of these rules may require us to hold more of our assets in cash and other assets that generate lower yields than other investments. Documentation requirements attendant to the new margining regime are potentially burdensome and costly. The new regulations may reduce the level of risk exposure we have to our derivatives counterparties (currently managed by holding collateral), but will increase our exposure to central clearinghouses and clearing members with which we transact. The standardization of derivatives products for clearing may make customized products unavailable or uneconomical, potentially decreasing the effectiveness of some of our hedging activities. As implementation of the new regulatory framework continues, the extent to which our derivatives costs and strategies may change and the extent to which those changes may affect the range or pricing of our products remains uncertain.

Another area of continuing concern related to the Dodd-Frank Act is the possible impact of the Volcker Rule on non-bank financial market participants. The rule was approved by federal regulators in December 2013; implementation will continue through mid-2015 with respect to certain covered activities and has been extended to mid-2017 with respect to others. Although the final rule appears to preserve legitimate market-making activities by banks, the ultimate impact of the Volcker Rule on market liquidity and any resulting detriment to long-term investors, such as insurance companies, cannot be predicted at this time.

In addition, the Dodd-Frank Act requires new regulations governing broker-dealers and investment advisers. In particular, the fiduciary standard rulemaking could potentially have broad implications for how our products are designed and sold in the future. In January 2011, the U.S. Securities and Exchange Commission (“SEC”) released a study on the obligations and standards of conduct of financial professionals, as required under the Dodd-Frank Act. The SEC staff recommended establishing a uniform fiduciary standard for investment advisers and broker-dealers when providing investment advice about securities, including guidance for principal trading and definitions of the duties of loyalty and care owed to retail customers that would be consistent with the standard that currently applies to investment advisers. A more uniform fiduciary standard could potentially affect our business in areas including, but not limited to:

design and availability of proprietary products; commission-based compensation arrangements; advertising and other communications; use of finders or solicitors of clients (i.e., business contacts who provide referrals); and continuing education requirements for advisors.

Additional provisions of the Dodd-Frank Act include, among other things, the creation of a new Consumer Financial Protection Bureau to protect consumers of certain financial products; and changes to certain corporate governance rules. The SEC has postponed rule making on a number of these provisions through 2015. In December 2013, the new Federal Insurance Office established under Dodd-Frank issued a wide-ranging report on the state of insurance regulation in the U.S., together with a series of recommendations on ways to monitor and improve the regulatory environment. The ultimate impact of these recommendations on our business is undeterminable at this time.

Department of Labor Regulation

In October 2010, the U.S. Department of Labor (“DOL”) issued a proposed regulation that would, if finalized in current form, substantially expand the range of activities that would be considered to be fiduciary investment advice under the Employee Retirement Income Security Act of 1974 (“ERISA”) and the Internal Revenue Code. If finalized as proposed, the investment-related information and support that our advisors and employees could provide to plan sponsors, participants and IRA holders on a non-fiduciary basis could be substantially limited beyond what is allowed under current law. This could have a material impact on the level and type of services that we can provide as well as the nature and amount of compensation and fees we and our advisors and employees may receive for investment-related services. This proposal has generated substantial public comment and as a result, it is likely that any final regulation will be different from the proposal. On September 19, 2011, the DOL announced that it would re-propose the regulation in 2012. This re-proposal has been delayed, and it is currently expected that the re-proposal will be issued sometime in 2015. The exact nature of any re-proposed regulation, the extent of any substantive changes from the originally proposed regulation and any potential effect on our businesses is undeterminable as this time.

Federal Tax Legislation

There have been several tax reform initiatives underway in the House and the Senate over the last year. Most notably, the House Ways and Means Committee, led by Representative Dave Camp, released a draft of a tax reform proposal in early 2014. Some of the proposed changes include (i) changes to the calculation of the separate account dividends-received deduction that would largely eliminate the benefit insurance companies receive, (ii) changes to the calculation of deductible insurance reserves that would decrease the value of the reserve deduction available to insurance companies and (iii) changes to the rules for deferred acquisition costs (“DAC”) that would increase the amount of premiums received that a company would be required to capitalize. All of these proposals are identical (or at least similar) to proposals that have been discussed previously with various industry groups and coalitions. The likelihood of enactment of any of the proposals, whether as the part of a comprehensive tax reform act or as discrete legislative changes, is highly uncertain at this time due to the volatile political environment as well as the uncertainty that always exists with any tax reform initiative.

On February 2, 2015, the Obama Administration submitted its fiscal year 2016 budget proposal to Congress. The proposal for 2016 follows previous budget proposals from the Obama Administration and included policy and tax recommendations that could have an effect on our Company and our products. Included among the various proposed policy recommendations could be modifications to the dividends-received deduction for life insurance company separate accounts. If these proposed changes were enacted into law or, if applicable, changed administratively through the tax regulation process, they could have an adverse effect upon the Company's profitability. The budget could also propose changes to the tax laws that would affect purchasers of products offered and sold through our various business lines, including such items as expanding the pro-rata interest expense disallowance for COLI, the creation of an auto-enrollment IRA program for small employers and encouraging increased use of qualified plans through tax credits to defray start-up costs. The 2016 budget proposal also included an updated version of a financial services surcharge, known as the "Bank Tax," that for the first time would include insurance companies within its reach. Some of these changes, should they become law, would have the potential to improve the attractiveness of our products to consumers and enhance our sales. Other provisions could have the opposite effect. The submission of the Administration's budget to Congress begins the Congressional Budget process. Any changes to the tax law will require legislation, which may or may not incorporate provisions found in the budget proposal, to move through both houses of Congress before being signed into law by the President.

Additionally, the uncertainty of federal funding and the future of the Social Security Disability Insurance ("SSDI") program can have a substantial impact on the entire group benefit market. The SSDI program is currently projected to become insolvent by the end of 2016 without federal budget changes. SSDI benefits are a direct offset to the cost of group disability benefits. Changes to SSDI eligibility requirements and benefit allowances could potentially increase the cost of group disability benefits.

Health Care Reform Legislation

In March 2010, the President signed into law the Patient Protection and Affordable Care Act, which was subsequently amended by the Health Care and Education Reconciliation Act. This legislation, as well as subsequent state and federal laws and regulations, includes provisions that provide for additional taxes to help finance the cost of these reforms and substantive changes and additions to health care and related laws, which could potentially impact some of our lines of businesses.

Patriot Act

The USA PATRIOT Act of 2001 includes anti-money laundering and financial transparency laws as well as various regulations applicable to broker-dealers and other financial services companies, including insurance companies. Financial institutions are required to collect information regarding the identity of their customers, watch for and report suspicious transactions, respond to requests for information by regulatory authorities and law enforcement agencies, and share information with other financial institutions. As a result, we are required to maintain certain internal compliance practices, procedures and controls.

ERISA Considerations

ERISA is a comprehensive federal statute that applies to U.S. employee benefit plans sponsored by private employers and labor unions. Plans subject to ERISA include pension and profit sharing plans and welfare plans, including health, life and disability plans. ERISA provisions include reporting and disclosure rules, standards of conduct that apply to plan fiduciaries and prohibitions on transactions known as “prohibited transactions,” such as conflict-of-interest transactions and certain transactions between a benefit plan and a party in interest. ERISA also provides for a scheme of civil and criminal penalties and enforcement. Our insurance, asset management, plan administrative services and other businesses provide services to employee benefit plans subject to ERISA, including services where we may act as an ERISA fiduciary. In addition to ERISA regulation of businesses providing products and services to ERISA plans, we become subject to ERISA’s prohibited transaction rules for transactions with those plans, which may affect our ability to enter transactions, or the terms on which transactions may be entered, with those plans, even in businesses unrelated to those giving rise to party in interest status.

Broker-Dealer and Securities Regulation

In addition to being registered under the Securities Act of 1933, some of our separate accounts as well as mutual funds that we sponsor are registered as investment companies under the Investment Company Act of 1940, and the shares of certain of these entities are qualified for sale in some or all states and the District of Columbia. We also have several subsidiaries that are registered as broker-dealers under the Securities Exchange Act of 1934, as amended (“Exchange Act”) and are subject to federal and state regulation, including, but not limited to, the Financial Industry Regulation Authority’s (“FINRA”) net capital rules. In addition, we have several subsidiaries that are investment advisors registered under the Investment Advisers Act of 1940. Agents and employees registered or associated with any of our broker-dealer subsidiaries are subject to the Exchange Act and to examination requirements and regulation by the SEC, FINRA and state securities commissioners. Regulation also extends to various LNC entities that employ or control those individuals. The SEC and other governmental agencies and self-regulatory organizations, as well as state securities commissions in the U.S., have the power to conduct administrative proceedings that can result in censure, fines, the issuance of cease-and-desist orders or suspension and termination or limitation of the activities of the regulated entity or its employees.

Environmental Considerations

Federal, state and local environmental laws and regulations apply to our ownership and operation of real property. Inherent in owning and operating real property are the risks of hidden environmental liabilities and the costs of any required clean-up. Under the laws of certain states, contamination of a property may give rise to a lien on the property to secure recovery of the costs of clean-up, which could adversely affect our commercial mortgage lending. In several states, this lien has priority over the lien of an existing mortgage against such property. In addition, in some states and under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (“CERCLA”), we may be liable, as an “owner” or “operator,” for costs of cleaning-up releases or threatened releases of hazardous substances at a property mortgaged to us. We also risk environmental liability when we foreclose on a property mortgaged to us. Federal legislation provides for a safe harbor from CERCLA liability for secured lenders that foreclose and sell the mortgaged real estate, provided that certain requirements are met. However, there are circumstances in which actions taken could still expose us to CERCLA liability. Application of various other federal and state environmental laws could also result in the imposition of liability on us for costs associated with environmental hazards.

We routinely conduct environmental assessments for real estate we acquire for investment and before taking title through foreclosure to real property collateralizing mortgages that we hold. Although unexpected environmental liabilities can always arise, based on these environmental assessments and compliance with our internal procedures, we believe that any costs associated with compliance with environmental laws and regulations or any clean-up of properties would not have a material adverse effect on our results of operations.

Intellectual Property

We rely on a combination of copyright, trademark, patent and trade secret laws to establish and protect our intellectual property. We have implemented a patent strategy designed to protect innovative aspects of our products and processes which we believe distinguish us from competitors. We currently own several issued U.S. patents and have additional patent applications pending in the U.S. Patent and Trademark Office.

We regard our patents as valuable assets and intend to protect them against infringement. However, complex legal and factual determinations and changes in patent law make protection uncertain, and while we believe our patents provide us with a competitive advantage, we cannot be certain that patents will be issued from any of our pending patent applications or that any issued patents will

have sufficient breadth to offer meaningful protection. In addition, our issued patents may be successfully challenged, invalidated, circumvented or found unenforceable so that our patent rights would not create an effective competitive barrier.

Finally, we have an extensive portfolio of trademarks and service marks that we consider important in the marketing of our products and services, including, among others, the trademarks of the Lincoln National and Lincoln Financial names, the Lincoln silhouette logo and the combination of these marks. Trademark registrations may be renewed indefinitely subject to continued use and registration requirements. We regard our trademarks as valuable assets in marketing our products and services and intend to protect them against infringement and dilution.

EMPLOYEES

As of December 31, 2014, we had a total of 9,627 employees. In addition, we had a total of 1,419 planners and agents who had active sales contracts with one of our insurance subsidiaries. None of our employees are represented by a labor union, and we are not a party to any collective bargaining agreements. We consider our employee relations to be good.

AVAILABLE INFORMATION

We file annual, quarterly and current reports, proxy statements and other documents with the SEC under the Exchange Act. The public may read and copy any materials that we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. Also, the SEC maintains a website that contains reports, proxy and information statements and other information regarding issuers, including LNC, that file electronically with the SEC. The public can obtain any documents that we file with the SEC at www.sec.gov.

We also make available, free of charge, on or through our website, www.lfg.com, our Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC.

Item 1A. Risk Factors

You should carefully consider the risks described below before investing in our securities. The risks and uncertainties described below are not the only ones facing our Company. Additional risks and uncertainties not presently known to

us or that we currently deem immaterial may also impair our business operations. If any of these risks actually occur, our business, financial condition and results of operations could be materially affected. In that case, the value of our securities could decline substantially.

Legislative, Regulatory and Tax

Our businesses are heavily regulated and changes in regulation may affect our insurance subsidiary capital requirements or reduce our profitability.

Our insurance subsidiaries are subject to extensive supervision and regulation in the states in which we do business. The supervision and regulation relate to numerous aspects of our business and financial condition. The primary purpose of the supervision and regulation is the protection of our insurance contract holders, and not our investors. The extent of regulation varies, but generally is governed by state statutes. These statutes delegate regulatory, supervisory and administrative authority to state insurance departments. This system of supervision and regulation covers, among other things:

- Standards of minimum capital requirements and solvency, including RBC measurements;
- Restrictions on certain transactions, including, but not limited to, reinsurance between our insurance subsidiaries and their affiliates;
- Restrictions on the nature, quality and concentration of investments;
- Restrictions on the receipt of reinsurance credit;
- Restrictions on the types of terms and conditions that we can include in the insurance policies offered by our primary insurance operations;
- Limitations on the amount of dividends that insurance subsidiaries can pay;
- Licensing status of the company;
- Certain required methods of accounting pursuant to statutory accounting principles (“SAP”);
- Reserves for unearned premiums, losses and other purposes; and
- Assignment of residual market business and potential assessments for the provision of funds necessary for the settlement of covered claims under certain policies provided by impaired, insolvent or failed insurance companies.

State insurance regulators and the NAIC regularly re-examine existing laws and regulations applicable to insurance companies and their products. Changes in these laws and regulations, or in interpretations thereof, sometimes lead to additional expense for the insurer and, thus, could have a material adverse effect on our financial condition and results of operations. For example, the NAIC could enact additional regulations related to the reinsurance of variable annuity business that could limit or even eliminate our ability to reinsure such business in the future.

Although we endeavor to maintain all required licenses and approvals our businesses may not fully comply with the wide variety of applicable laws and regulations or the relevant authority's interpretation of the laws and regulations, which may change from time to time. Also, regulatory authorities have relatively broad discretion to grant, renew or revoke licenses and approvals. If we do not have the requisite licenses and approvals or do not comply with applicable regulatory requirements, the insurance regulatory authorities could preclude or temporarily suspend us from carrying on some or all of our activities or impose substantial fines. Further, insurance regulatory authorities have relatively broad discretion to issue orders of supervision, which permit such authorities to supervise the business and operations of an insurance company. As of December 31, 2014, no state insurance regulatory authority had imposed on us any material fines or revoked or suspended any of our licenses to conduct insurance business in any state or issued an order of supervision with respect to our insurance subsidiaries, which would have a material adverse effect on our results of operations or financial condition.

In addition, our broker-dealer and investment advisor subsidiaries as well as our variable annuities and variable life insurance products, are subject to regulation and supervision by the SEC and FINRA. These laws and regulations generally grant supervisory agencies and self-regulatory organizations broad administrative powers, including the power to limit or restrict the subsidiaries from carrying on their businesses in the event that they fail to comply with such laws and regulations. The foregoing regulatory or governmental bodies, as well as the DOL and others, have the authority to review our products and business practices and those of our agents and employees. In recent years, there has been increased scrutiny of our businesses by these bodies, which has included more extensive examinations, regular sweep inquiries and more detailed review of disclosure documents. These regulatory or governmental bodies may bring regulatory or other legal actions against us if, in their view, our practices, or those of our agents or employees, are improper. These actions can result in substantial fines, penalties or prohibitions or restrictions on our business activities and could have a material adverse effect on our business, results of operations or financial condition.

Attempts to mitigate the impact of Regulation XXX and Actuarial Guideline 38 may fail in whole or in part resulting in an adverse effect on our financial condition and results of operations.

XXX requires insurers to establish additional statutory reserves for term life insurance policies with long-term premium guarantees and UL policies with secondary guarantees. In addition, AG38 clarifies the application of XXX with respect to certain UL insurance policies with secondary guarantees. Virtually all of our newly issued term and the majority of our newly issued UL insurance products are affected by XXX and AG38. The application of both AG38 and XXX involve numerous interpretations. If state insurance departments do not agree with our interpretations, we may have to increase reserves related to such policies. The NYDFS does not recognize the NAIC revisions to AG38 in applying the New York law governing the reserves to be held for UL and VUL products containing secondary guarantees. The change, which was effective as of December 31, 2013, impacts our New York-domiciled insurance subsidiary, LLANY. LLANY discontinued the sale of these products in early 2013, but the change affects those policies sold prior to that time. We began phasing in the increase in reserves over five years beginning in 2013. As of December 31, 2014, we have increased reserves by \$180 million. The additional increase in reserves over the next three years is subject to ongoing discussions with the NYDFS. However, we do not expect the amount for each of the remaining years to exceed \$90 million per year.

We have implemented, and plan to continue to implement, reinsurance and capital management transactions to mitigate the capital impact of XXX and AG38, including the use of captive reinsurance subsidiaries. Recently, the NAIC adopted AG48 regulating the terms of these arrangements that are entered into or amended in certain ways after December 31, 2014. This new guideline imposes restrictions on the types of assets that can be used to support the reinsurance in these kinds of transactions. We cannot provide assurance that we will be able to continue to implement transactions or take other actions to mitigate the impact of XXX or AG38 on future sales of term and UL insurance products. If we are unable to continue to implement such solutions for any reason, we may have lower returns on such products sold than we currently anticipate and/or reduce our sales of these products.

Changes in U.S. federal income tax law could increase our tax costs and make the products that we sell less desirable.

Changes to the Internal Revenue Code, administrative rulings or court decisions could increase our effective tax rate, make our products less desirable and lower our net income on both a statutory accounting and GAAP basis. For example, the House Ways and Means Committee, led by Representative Dave Camp, released a draft of a tax reform act in early 2014. Some of the proposed changes include (i) changes to the calculation of the separate account dividends-received deduction that would largely eliminate the benefit insurance companies receive, (ii) changes to the calculation of deductible insurance reserves that would decrease the value of the reserve deduction available to insurance companies and (iii) changes to the rules for DAC that would increase the amount of premiums received that a company would be required to capitalize.

Further, in early February 2015 the Obama Administration released its fiscal year 2016 budget proposal that included proposals which, if enacted, would affect the taxation of life insurance companies and certain life insurance products. If enacted into law, the statutory changes contemplated by the Administration's revenue proposals could, among other things, change the method used to determine the amount of dividend income received by a life insurance company on assets held in separate accounts used to support products, including variable life insurance and variable annuity contracts, that are eligible for the dividends-received deduction. The dividends-received deduction reduces the amount of dividend income subject to tax and is a significant component of the difference between our actual tax expense and expected amount determined using the federal statutory tax rate of 35%. Our income tax provision for the year ended December 31, 2014, included a separate account dividends-received deduction benefit of \$163 million. In addition, the proposals could affect the treatment of COLI policies by limiting the availability of certain interest deductions for companies that purchase those policies.

If proposals of this type were enacted, our sale of COLI, variable annuities and variable life products could be adversely affected and our actual tax expense could increase, reducing earnings.

Legal and regulatory actions are inherent in our businesses and could result in financial losses or harm our businesses.

We are, and in the future may be, subject to legal and regulatory actions in the ordinary course of our insurance and retirement operations. Pending legal actions include proceedings relating to aspects of our businesses and operations that are specific to us and proceedings that are typical of the businesses in which we operate. Some of these proceedings have been brought on behalf of various alleged classes of complainants. In certain of these matters, the plaintiffs are seeking large and/or indeterminate amounts, including punitive or exemplary damages. Substantial legal liability in these or future legal or regulatory actions could have a material financial effect or cause significant harm to our reputation, which in turn could materially harm our business prospects. See Note 13 for a description of legal and regulatory proceedings and actions.

Implementation of the provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act may subject us to substantial additional federal regulation, and we cannot predict the effect on our business, results of operations, cash flows or financial condition.

Since it was enacted in 2010, the Dodd-Frank Act has brought wide-ranging changes to the financial services industry, including changes to the rules governing derivatives; restrictions on proprietary trading by certain entities; a study by the SEC of the rules governing broker-dealers and investment advisers with respect to individual investors and investment advice, followed potentially by rulemaking; the creation of a new Federal Insurance Office within the U.S. Treasury to gather information and make recommendations regarding regulation of the insurance industry; the creation of a resolution authority to unwind failing institutions; the creation of a new Consumer Financial Protection Bureau to protect consumers of certain financial products; and changes to executive compensation and certain corporate governance rules, among other things.

The Dodd-Frank Act requires significant rulemaking across numerous agencies within the federal government, some of which has been implemented. The implementation of newly-adopted rules will continue into 2015, as will the rulemaking process. The ultimate impact of these provisions on our businesses (including product offerings), results of operations, liquidity and capital resources is currently indeterminable.

Changes in accounting standards issued by the Financial Accounting Standards Board or other standard-setting bodies may adversely affect our financial statements.

Our financial statements are prepared in accordance with GAAP as identified in the Financial Accounting Standards Board ("FASB") Accounting Standards Codification™ ("ASC"). From time to time, we are required to adopt new or

revised accounting standards or guidance that are incorporated into the FASB ASC. It is possible that future accounting standards we are required to adopt could change the current accounting treatment that we apply to our consolidated financial statements and that such changes could have a material adverse effect on our financial condition and results of operations.

Specifically, the FASB is working on several key projects, including those which could result in significant changes to how we account for and report our insurance contracts, financial instruments and DAC. Depending on the magnitude of the changes ultimately adopted by the FASB, the proposed changes to GAAP may impose special demands on issuers in the areas of employee training, internal controls, contract fulfillment and disclosure and may affect how we manage our business, as it may affect other business processes such as design of compensation plans, product design, etc. The effective dates and transition methods are not known; however, issuers may be required to or may choose to adopt the new standards retrospectively. In this case, the issuer will report results under the new accounting method as of the effective date, as well as for all periods presented. In addition, the SEC is considering whether and how to incorporate International Financial Reporting Standards into the U.S. financial reporting system.

Our domestic insurance subsidiaries are subject to SAP. Any changes in the method of calculating reserves for our life insurance and annuity products under SAP, such as the finalization of principles-based reserving, may result in increased reserve requirements.

Anti-takeover provisions could delay, deter or prevent our change in control, even if the change in control would be beneficial to LNC shareholders.

We are an Indiana corporation subject to Indiana state law. Certain provisions of Indiana law could interfere with or restrict takeover bids or other change in control events affecting us. Also, provisions in our articles of incorporation, bylaws and other agreements to which we are a party could delay, deter or prevent our change in control, even if a change in control would be beneficial to shareholders. In addition, under Indiana law, directors may, in considering the best interests of a corporation, consider the effects of any action on shareholders, employees, suppliers and customers of the corporation and the communities in which offices and other facilities are located, and other factors the directors consider pertinent. One statutory provision prohibits, except under specified circumstances, LNC from engaging in any business combination with any shareholder who owns 10% or more of our common stock (which shareholder, under the statute, would be considered an "interested shareholder") for a period of five years following the time that such shareholder became an interested shareholder, unless such business combination is approved by the board of directors prior to such person becoming an interested shareholder. In addition, our articles of incorporation contain a provision requiring holders of at least three-fourths of our voting shares then outstanding and entitled to vote at an election of directors, voting together, to approve a transaction with an interested shareholder rather than the simple majority required under Indiana law, unless certain price thresholds are met.

In addition to the anti-takeover provisions of Indiana law, there are other factors that may delay, deter or prevent our change in control. As an insurance holding company, we are regulated as an insurance holding company and are subject to the insurance holding company acts of the states in which our insurance company subsidiaries are domiciled. The insurance holding company acts and regulations restrict the ability of any person to obtain control of an insurance company without prior regulatory approval. Under those statutes and regulations, without such approval (or an exemption), no person may acquire any voting security of a domestic insurance company, or an insurance holding company which controls an insurance company, or merge with such a holding company, if as a result of such transaction such person would “control” the insurance holding company or insurance company. “Control” is generally defined as the direct or indirect power to direct or cause the direction of the management and policies of a person and is presumed to exist if a person directly or indirectly owns or controls 10% or more of the voting securities of another person.

Market Conditions

Weak conditions in the global capital markets and the economy generally may materially adversely affect our business and results of operations.

Our results of operations are materially affected by conditions in the global capital markets and the economy generally, both in the U.S. and elsewhere around the world. Continued unconventional easing from the major central banks, ongoing global growth weakness and the ability of the U.S. government to proactively address the fiscal imbalance remain key challenges for markets and our business. These macro-economic conditions may have an adverse effect on us given our credit and equity market exposure. In the event of extreme prolonged market events, such as the global credit crisis and recession that occurred during 2008 and 2009, we could incur significant losses. Even in the absence of a market downturn, we are exposed to substantial risk of loss due to market volatility.

Factors such as consumer spending, business investment, domestic and foreign government spending, the volatility and strength of the capital markets, the potential for inflation or deflation and uncertainty over domestic and foreign government actions all affect the business and economic environment and, ultimately, the amount and profitability of our business. In an economic downturn characterized by higher unemployment, lower disposable income, lower corporate earnings, lower business investment and lower consumer spending, the demand for our financial and insurance products could be adversely affected. In addition, we may experience an elevated incidence of claims and lapses or surrenders of policies. Our contract holders may choose to defer paying insurance premiums or stop paying insurance premiums altogether. Adverse changes in the economy could affect earnings negatively and could have a material adverse effect on our business, results of operations and financial condition.

Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals.

Interest rate fluctuations and/or a sustained period of low interest rates could negatively affect our profitability. Some of our products, principally fixed annuities, UL, IUL and the fixed portions of variable annuities, and VUL have interest rate guarantees that expose us to the risk that changes in interest rates will reduce our spread, or the difference between the amounts that we are required to pay under the contracts and the amounts we are able to earn on our general account investments intended to support our obligations under the contracts. Spreads are an important component of our net income. Declines in our spread or instances where the returns on our general account investments are not enough to support the interest rate guarantees on these products could have a material adverse effect on our businesses or results of operations.

In periods when interest rates are declining or remain at low levels, we may have to reinvest the cash we receive as interest or return of principal on our investments in lower yielding instruments reducing our spread. Moreover, borrowers may prepay fixed-income securities, commercial mortgages and mortgage-backed securities in our general account in order to borrow at lower market rates, which exacerbates this risk. Lowering interest crediting rates helps to mitigate the effect of spread compression on some of our products. However, because we are entitled to reset the interest rates on our fixed-rate annuities only at limited, pre-established intervals, and since many of our contracts have guaranteed minimum interest or crediting rates, our spreads could still decrease. As of December 31, 2014, 43% of our annuities business, 94% of our retirement plan services business and 97% of our life insurance business with guaranteed minimum interest or crediting rates are at their guaranteed minimums.

Our expectation for future spreads is an important component in the amortization of DAC and value of business acquired (“VOBA”) as it affects the future profitability of the business. Currently, new money rates continue to be at historically low levels. The Federal Reserve Board has moved from calendar-based guidance to macro-based thresholds and forecasts that point toward short-term rates likely remaining near or slightly above 1% at the end of 2015. If interest rates were to remain low over a sustained period of time, this will put additional pressure on our spreads, potentially resulting in unlocking of our DAC and VOBA assets, thereby reducing net income in the affected reporting period. We would expect the effect to be most pronounced in our Life Insurance segment. For additional information on interest rate risks, see “Part II – Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

A decline in market interest rates could also reduce our return on investments that do not support particular policy obligations. During periods of sustained lower interest rates, our recorded policy liabilities may not be sufficient to meet future policy obligations and may need to be strengthened, thereby reducing net income in the affected reporting period. Accordingly, declining interest rates may materially affect our results of operations, financial condition and cash flows and significantly reduce our profitability.

Increases in market interest rates may also negatively affect our profitability. In periods of rapidly increasing interest rates, we may not be able to replace the assets in our general account with higher yielding assets needed to fund the higher crediting rates necessary to keep our interest-sensitive products competitive. We, therefore, may have to accept a lower spread and thus lower profitability or face a decline in sales and greater loss of existing contracts and related assets. Increases in interest rates may cause increased surrenders and withdrawals of insurance products. In periods of increasing interest rates, policy loans and surrenders and withdrawals of life insurance policies and annuity contracts may increase as contract holders seek to buy products with perceived higher returns. This process may lead to a flow of cash out of our businesses. These outflows may require investment assets to be sold at a time when the prices of those assets are lower because of the increase in market interest rates, which may result in realized investment losses.

A sudden demand among consumers to change product types or withdraw funds could lead us to sell assets at a loss to meet the demand for funds. Furthermore, unanticipated increases in withdrawals and termination may cause us to unlock our DAC and VOBA assets, which would reduce net income. An increase in market interest rates could also have a material adverse effect on the value of our investment portfolio, for example, by decreasing the estimated fair values of the fixed-income securities that comprise a substantial portion of our investment portfolio. An increase in interest rates could also result in decreased fee income associated with a decline in the value of variable annuity account balances invested in fixed-income funds.

Because the equity markets and other factors impact the profitability and expected profitability of many of our products, changes in equity markets and other factors may significantly affect our business and profitability.

The fee income that we earn on variable annuities and VUL insurance policies is based primarily upon account values. Because strong equity markets result in higher account values, strong equity markets positively affect our net income through increased fee income. Conversely, a weakening of the equity markets results in lower fee income and may have a material adverse effect on our results of operations and capital resources.

The increased fee income resulting from strong equity markets increases the estimated gross profits (“EGPs”) from variable insurance products as do better than expected lapses, mortality rates and expenses. As a result, higher EGPs may result in lower net amortized costs related to DAC, deferred sales inducements (“DSI”), VOBA, deferred front-end loads (“DFEL”) and changes in future contract benefits. However, a decrease in the equity markets, as well as worse than expected increases in lapses, mortality rates and expenses, depending upon their significance, may result in higher net amortized costs associated with DAC, DSI, VOBA, DFEL and changes in future contract benefits and may have a material adverse effect on our results of operations and capital resources. If we had unlocked our reversion to the mean (“RTM”) assumption in the corridor as of December 31, 2014, we would have recorded favorable unlocking of approximately \$300 million, pre-tax, for our Annuities segment, approximately \$25 million, pre-tax, for our Retirement Plan Services segment and approximately \$40 million, pre-tax, for our Life Insurance segment. For further information about our RTM process, see “Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL – Reversion to the Mean” in the MD&A.

Changes in the equity markets, interest rates and/or volatility affect the profitability of our products with guaranteed benefits; therefore, such changes may have a material adverse effect on our business and profitability.

Certain of our variable annuity products include guaranteed benefit riders. These include GDB, GWB and GIB riders. Our GWB, GIB and 4LATER® (a form of GIB rider) features have elements of both insurance benefits accounted for under the Financial Services – Insurance – Claim Costs and Liabilities for Future Policy Benefits Subtopic of the FASB ASC (“benefit reserves”) and embedded derivatives accounted for under the Derivatives and Hedging and the Fair Value Measurements and Disclosures Topics of the FASB ASC (“embedded derivative reserves”). We calculate the value of the embedded derivative reserve and the benefit reserves based on the specific characteristics of each guaranteed living benefit feature. The amount of reserves related to GDB for variable annuities is tied to the difference between the value of the underlying accounts and the GDB, calculated using a benefit ratio approach. The GDB reserves take into account the present value of total expected GDB payments, the present value of total expected GDB assessments over the life of the contract, claims paid to date and assessments to date. Reserves for our GIB and certain GWB with lifetime benefits are based on a combination of fair value of the underlying benefit and a benefit ratio approach that is based on the projected future payments in excess of projected future account values. The benefit ratio approach takes into account the present value of total expected GIB payments, the present value of total expected GIB assessments over the life of the contract, claims paid to date and assessments to date. The amount of reserves related to those GWB that do not have lifetime benefits is based on the fair value of the underlying benefit.

Both the level of expected payments and expected total assessments used in calculating the reserves not carried at fair value are affected by the equity markets. The liabilities related to fair value are impacted by changes in equity markets, interest rates, volatility, foreign exchange rates and credit spreads. Accordingly, strong equity markets, increases in interest rates and decreases in volatility will generally decrease the reserves calculated using fair value. Conversely, a decrease in the equity markets along with a decrease in interest rates and an increase in volatility will generally result in an increase in the reserves calculated using fair value.

Increases in reserves would result in a charge to our earnings in the quarter in which the increase occurs. Therefore, we maintain a customized dynamic hedge program that is designed to mitigate the risks associated with income volatility around the change in reserves on guaranteed benefits. However, the hedge positions may not be effective to exactly offset the changes in the carrying value of the guarantees due to, among other things, the time lag between changes in their values and corresponding changes in the hedge positions, high levels of volatility in the equity markets and derivatives markets, extreme swings in interest rates, contract holder behavior different than expected, a strategic decision to adjust the hedging strategy in reaction to extreme market conditions or inconsistencies between economic and statutory reserving guidelines and divergence between the performance of the underlying funds and hedging indices.

In addition, we remain liable for the guaranteed benefits in the event that derivative counterparties are unable or unwilling to pay, and we are also subject to the risk that the cost of hedging these guaranteed benefits increases, resulting in a reduction to net income. These, individually or collectively, may have a material adverse effect on net income, financial condition or liquidity.

Liquidity and Capital Position

Adverse capital and credit market conditions may affect our ability to meet liquidity needs, access to capital and cost of capital.

We need liquidity to pay our operating expenses, interest on our debt and dividends on our capital stock, to maintain our securities lending activities and to replace certain maturing liabilities. Without sufficient liquidity, we will be forced to curtail our operations, and our business will suffer. When considering our liquidity and capital position, it is important to distinguish between the needs of our insurance subsidiaries and the needs of the holding company.

For our insurance and other subsidiaries, the principal sources of liquidity are insurance premiums and fees, annuity considerations and cash flow from our investment portfolio and assets, consisting mainly of cash or assets that are readily convertible into cash.

In the event that current resources do not satisfy our needs, we may have to seek additional financing. The availability of additional financing will depend on a variety of factors such as market conditions, the general availability of credit, the volume of trading activities, the overall availability of credit to the financial services industry, our credit ratings and credit capacity, as well as the possibility that customers or lenders could develop a negative perception of our long- or short-term financial prospects if we incur large investment losses or if the level of our business activity decreases due to a market downturn. Similarly, our access to funds may be impaired if regulatory authorities or rating agencies take negative actions against us. See “Review of Consolidated Financial Condition – Liquidity and Capital Resources – Sources of Liquidity and Cash Flow” in the MD&A for a description of our credit ratings. Our internal sources of liquidity may prove to be insufficient, and in such case, we may not be able to successfully obtain additional financing on favorable terms, or at all.

Disruptions, uncertainty or volatility in the capital and credit markets may also limit our access to capital required to operate our business, most significantly our insurance operations. Such market conditions may limit our ability to replace, in a timely manner, maturing liabilities; satisfy statutory capital requirements; generate fee income and market-related revenue to meet liquidity needs; and access the capital necessary to grow our business. As such, we may be forced to delay raising capital, issue shorter term securities than we prefer or bear an unattractive cost of capital which could decrease our profitability and significantly reduce our financial flexibility. Our results of operations, financial condition, cash flows and statutory capital position could be materially adversely affected by disruptions in the financial markets.

Because we are a holding company with no direct operations, the inability of our subsidiaries to pay dividends to us in sufficient amounts would harm our ability to meet our obligations.

We are a holding company and we have no direct operations. Our principal asset is the capital stock of our insurance subsidiaries. Our ability to meet our obligations for payment of interest and principal on outstanding debt obligations and to pay dividends to shareholders, repurchase our securities and pay corporate expenses depends primarily on the ability of our subsidiaries to pay dividends or to advance or repay funds to us. Under Indiana laws and regulations, our Indiana insurance subsidiaries, including LNL, our primary insurance subsidiary, may pay dividends to us without prior approval of the Commissioner up to a certain threshold, or must receive prior approval of the Commissioner to pay a dividend if such dividend, along with all other dividends paid within the preceding 12 consecutive months, exceed the statutory limitation. The current Indiana statutory limitation is the greater of 10% of the insurer's contract holders' surplus, as shown on its last annual statement on file with the Commissioner, or the insurer's statutory net gain from operations for the previous 12 months, but in no event to exceed statutory unassigned surplus.

In addition, payments of dividends and advances or repayment of funds to us by our insurance subsidiaries are restricted by the applicable laws of their respective jurisdictions requiring that our insurance subsidiaries hold a specified amount of minimum reserves in order to meet future obligations on their outstanding policies. These regulations specify that the minimum reserves shall be calculated to be sufficient to meet future obligations, after giving consideration to future required premiums to be received, and are based on certain specified mortality and morbidity tables, interest rates and methods of valuation, which are subject to change. In order to meet their claims-paying obligations, our insurance subsidiaries regularly monitor their reserves to ensure we hold sufficient amounts to cover actual or expected contract and claims payments. At times, we may determine that reserves in excess of the minimum may be needed to ensure sufficiency.

Changes in, or reinterpretations of, these laws can constrain the ability of our subsidiaries to pay dividends or to advance or repay funds to us in sufficient amounts and at times necessary to meet our debt obligations and corporate expenses. Requiring our insurance subsidiaries to hold additional reserves has the potential to constrain their ability to pay dividends to the holding company. See "Legislative, Regulatory and Tax – Attempts to mitigate the impact of Regulation XXX and Actuarial Guideline 38 may fail in whole or in part resulting in an adverse effect on our financial condition and results of operations" above for additional information on potential changes in these laws.

The earnings of our insurance subsidiaries impact contract holders' surplus. Lower earnings constrain the growth in our insurance subsidiaries' capital, and therefore, can constrain the payment of dividends and advances or repayment of funds to us.

In addition, the amount of surplus that our insurance subsidiaries could pay as dividends is constrained by the amount of surplus they hold to maintain their financial strength ratings, to provide an additional layer of margin for risk protection and for future investment in our businesses. Notwithstanding the foregoing, we believe that our insurance subsidiaries have sufficient liquidity to meet their contract holder obligations and maintain their operations.

A decrease in the capital and surplus of our insurance subsidiaries may result in a downgrade to our credit and insurer financial strength ratings.

In any particular year, statutory surplus amounts and RBC ratios may increase or decrease depending on a variety of factors, including the amount of statutory income or losses generated by our insurance subsidiaries (which itself is sensitive to equity market and credit market conditions), the amount of additional capital our insurance subsidiaries must hold to support business growth, changes in reserving requirements, such as principles-based reserving, our inability to obtain reserve relief, changes in equity market levels, the value of certain fixed-income and equity securities in our investment portfolio, the value of certain derivative instruments that do not get hedge accounting treatment, changes in interest rates and foreign currency exchange rates, as well as changes to the NAIC RBC formulas. The RBC ratio is also affected by the product mix of the in-force book of business (i.e., the amount of business without guarantees is not subject to the same level of reserves as the business with guarantees). Most of these factors are outside of our control. Our credit and insurer financial strength ratings are significantly influenced by the statutory surplus amounts and RBC ratios of our insurance company subsidiaries. The RBC ratio of LNL is an important factor in the determination of the credit and financial strength ratings of LNC and its subsidiaries. In addition, rating agencies may implement changes to their internal models that have the effect of increasing or decreasing the amount of statutory capital we must hold in order to maintain our current ratings. In extreme scenarios of equity market declines, the amount of additional statutory reserves that we are required to hold for our variable annuity guarantees may increase at a rate greater than the rate of change of the markets. Increases in reserves reduce the statutory surplus used in calculating our RBC ratios. To the extent that our statutory capital resources are deemed to be insufficient to maintain a particular rating by one or more rating agencies, we may seek to raise additional capital through public or private equity or debt financing, which may be on terms not as favorable as in the past.

Alternatively, if we were not to raise additional capital in such a scenario, either at our discretion or because we were unable to do so, our financial strength and credit ratings might be downgraded by one or more rating agencies. For more information on risks regarding our ratings, see “Covenants and Ratings – A downgrade in our financial strength or credit ratings could limit our ability to market products, increase the number or value of policies being surrendered and/or hurt our relationships with creditors” below.

An inability to access our credit facilities could result in a reduction in our liquidity and lead to downgrades in our credit and financial strength ratings.

We have a \$2.5 billion unsecured facility, which expires on May 29, 2018. We also have other facilities that we enter into in the ordinary course of business. See “Review of Consolidated Financial Condition – Liquidity and Capital

Resources – Sources of Liquidity and Cash Flow – Financing Activities” in the MD&A and Note 12.

We rely on our credit facilities as a potential source of liquidity. We also use the credit facility as a potential backstop to provide variable annuity reserve credit. While our variable annuity hedge assets have historically always exceeded the statutory reserves, in certain severely stressed market conditions, it is possible that the hedge assets could be less than the statutory reserve. Our credit facility is available to provide reserve credit to LNL in such a case. If we were unable to access our facility in such circumstances, it could materially impact LNL’s capital position. The availability of these facilities could be critical to our credit and financial strength ratings and our ability to meet our obligations as they come due in a market when alternative sources of credit are tight. The credit facilities contain certain administrative, reporting, legal and financial covenants. We must comply with covenants under our credit facilities, including a requirement to maintain a specified minimum consolidated net worth.

Our right to borrow funds under these facilities is subject to the fulfillment of certain important conditions, including our compliance with all covenants, and our ability to borrow under these facilities is also subject to the continued willingness and ability of the lenders that are parties to the facilities to provide funds. Our failure to comply with the covenants in the credit facilities or fulfill the conditions to borrowings, or the failure of lenders to fund their lending commitments (whether due to insolvency, illiquidity or other reasons) in the amounts provided for under the terms of the facilities, would restrict our ability to access these credit facilities when needed and, consequently, could have a material adverse effect on our financial condition and results of operations.

Assumptions and Estimates

As a result of changes in assumptions, estimates and methods in calculating reserves, our reserves for future policy benefits and claims related to our current and future business as well as businesses we may acquire in the future may prove to be inadequate.

We establish and carry, as a liability, reserves based on estimates of how much we will need to pay for future benefits and claims. For our insurance products, we calculate these reserves based on many assumptions and estimates, including, but not limited to, estimated premiums we will receive over the assumed life of the policies, the timing of the events covered by the insurance policies, the lapse rate of the policies, the amount of benefits or claims to be paid and the investment returns on the assets we purchase with the premiums we receive.

The sensitivity of our statutory reserves and surplus established for our variable annuity base contracts and riders to changes in the equity markets will vary depending on the magnitude of the decline. The sensitivity will be affected by the level of account values relative to the

level of guaranteed amounts, product design and reinsurance. Statutory reserves for variable annuities depend upon the cumulative equity market impacts on the business in force, and therefore, result in non-linear relationships with respect to the level of equity market performance within any reporting period.

The assumptions and estimates we use in connection with establishing and carrying our reserves are inherently uncertain. Accordingly, we cannot determine with precision the ultimate amount or the timing of the payment of actual benefits and claims or whether the assets supporting the policy liabilities will grow to the level we assume prior to payment of benefits or claims. If our actual experience is different from our assumptions or estimates, our reserves may prove to be inadequate in relation to our estimated future benefits and claims. Increases in reserves have a negative effect on income from operations in the quarter incurred.

If our businesses do not perform well and/or their estimated fair values decline or the price of our common stock does not increase, we may be required to recognize an impairment of our goodwill or to establish a valuation allowance against the deferred income tax asset, which could have a material adverse effect on our results of operations and financial condition.

Goodwill represents the excess of the acquisition price incurred to acquire subsidiaries and other businesses over the fair value of their net assets as of the date of acquisition. As of December 31, 2014, we had a total of \$2.3 billion of goodwill on our Consolidated Balance Sheets. We test goodwill at least annually for indications of value impairment with consideration given to financial performance, mergers and acquisitions and other relevant factors. In addition, certain events, including a significant and adverse change in legal factors, accounting standards or the business climate, an adverse action or assessment by a regulator or unanticipated competition, would cause us to review the carrying amounts of goodwill for impairment. Impairment testing is performed based upon estimates of the fair value of the “reporting unit” to which the goodwill relates. Subsequent reviews of goodwill could result in an impairment of goodwill, and such write downs could have a material adverse effect on our net income and book value, but will not affect the statutory capital of our insurance subsidiaries. For more information on goodwill, see “Critical Accounting Policies and Estimates – Goodwill and Other Intangible Assets” in the MD&A and Note 10.

Deferred income tax represents the tax effect of the differences between the book and tax basis of assets and liabilities. Deferred tax assets are assessed periodically by management to determine if they are realizable. As of December 31, 2014, we had a deferred tax asset of \$1.9 billion. Factors in management’s determination include the performance of the business, including the ability to generate capital gains from a variety of sources and tax planning strategies. If, based on available information, it is more likely than not that the deferred income tax asset will not be realized, then a valuation allowance must be established with a corresponding charge to net income. Such valuation allowance could have a material adverse effect on our results of operations and financial condition.

The determination of the amount of allowances and impairments taken on our investments is highly subjective and could materially impact our results of operations or financial condition.

The determination of the amount of allowances and impairments varies by investment type and is based upon our periodic evaluation and assessment of known and inherent risks associated with the respective asset class. Such evaluations and assessments are revised as conditions change and new information becomes available. Management updates its evaluations regularly and reflects changes in allowances and impairments in operations as such evaluations are revised. There can be no assurance that our management has accurately assessed the level of impairments taken and allowances reflected in our financial statements. Furthermore, additional impairments may need to be taken or allowances provided for in the future. Historical trends may not be indicative of future impairments or allowances.

We regularly review our available-for-sale (“AFS”) securities for declines in fair value that we determine to be other-than-temporary. For an equity security, if we do not have the ability and intent to hold the security for a sufficient period of time to allow for a recovery in value, we conclude that an other-than-temporary impairment (“OTTI”) has occurred, and the amortized cost of the equity security is written down to the current fair value, with a corresponding change to realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). When assessing our ability and intent to hold the equity security to recovery, we consider, among other things, the severity and duration of the decline in fair value of the equity security as well as the cause of decline, a fundamental analysis of the liquidity, business prospects and overall financial condition of the issuer.

For a debt security, if we intend to sell a security or it is more likely than not we will be required to sell a debt security before recovery of its amortized cost basis and the fair value of the debt security is below amortized cost, we conclude that an OTTI has occurred and the amortized cost is written down to current fair value, with a corresponding charge to realized loss on our Consolidated Statements of Comprehensive Income (Loss). If we do not intend to sell a debt security or it is not more likely than not we will be required to sell a debt security before recovery of its amortized cost basis but the present value of the cash flows expected to be collected is less than the amortized cost of the debt security (referred to as the credit loss), we conclude that an OTTI has occurred and the amortized cost is written down to the estimated recovery value with a corresponding charge to realized loss on our Consolidated Statements of Comprehensive Income (Loss), as this is also deemed the credit portion of the OTTI. The remainder of the decline to fair value is recorded in other comprehensive income (loss) (“OCI”) to unrealized OTTI on AFS securities on our Consolidated Statements of Stockholders’ Equity, as this is considered a noncredit (i.e., recoverable) impairment. Net OTTI recognized in net income (loss) was \$16 million, \$70 million and \$153 million, pre-tax, for the years ended December 31, 2014, 2013 and 2012, respectively. The portion of OTTI recognized in OCI was \$10 million, pre-tax, for the years ended December 31, 2014 and 2013.

Related to our unrealized losses, we establish deferred tax assets for the tax benefit we may receive in the event that losses are realized. The realization of significant realized losses could result in an inability to recover the tax benefits and may result in the establishment of

valuation allowances against our deferred tax assets. Realized losses or impairments may have a material adverse impact on our results of operations and financial condition.

Our valuation of fixed maturity, equity and trading securities may include methodologies, estimations and assumptions which are subject to differing interpretations and could result in changes to investment valuations that may materially adversely affect our results of operations or financial condition.

Fixed maturity, equity and trading securities and short-term investments, which are reported at fair value on our Consolidated Balance Sheets, represented the majority of our total cash and invested assets. We have categorized these securities into a three-level hierarchy, based on the priority of the inputs to the respective valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3).

The determination of fair values in the absence of quoted market prices is based on valuation methodologies, securities we deem to be comparable and assumptions deemed appropriate given the circumstances. The fair value estimates are made at a specific point in time, based on available market information and judgments about financial instruments, including estimates of the timing and amounts of expected future cash flows and the credit standing of the issuer or counterparty. Factors considered in estimating fair value include coupon rate, maturity, estimated duration, call provisions, sinking fund requirements, credit rating, industry sector of the issuer and quoted market prices of comparable securities. The use of different methodologies and assumptions may have a material effect on the estimated fair value amounts.

During periods of market disruption, including periods of significantly increasing/decreasing or high/low interest rates, rapidly widening credit spreads or illiquidity, it may be difficult to value certain securities if trading becomes less frequent and/or market data becomes less observable. There may be certain asset classes that were in active markets with significant observable data that become illiquid due to the current financial environment. In such cases, more securities may fall to Level 3 and thus require more subjectivity and management judgment. As such, valuations may include inputs and assumptions that are less observable or require greater estimation, as well as valuation methods which are more sophisticated or require greater estimation, thereby resulting in values which may be less than the value at which the investments may be ultimately sold. Further, rapidly changing and unprecedented credit and equity market conditions could materially impact the valuation of securities as reported within our consolidated financial statements and the period-to-period changes in value could vary significantly. Decreases in value may have a material adverse effect on our results of operations or financial condition.

Significant adverse mortality experience may result in the loss of, or higher prices for, reinsurance.

We reinsure a significant amount of the mortality risk on fully underwritten, newly issued, individual life insurance contracts. We regularly review retention limits for continued appropriateness and they may be changed in the future. If we were to experience adverse mortality or morbidity experience, a significant portion of that would be reimbursed

by our reinsurers. Prolonged or severe adverse mortality or morbidity experience could result in increased reinsurance costs, and ultimately, reinsurers being unwilling to offer coverage. If we are unable to maintain our current level of reinsurance or purchase new reinsurance protection at comparable rates to what we are paying currently, we may have to accept an increase in our net exposures or revise our pricing to reflect higher reinsurance premiums or both. If this were to occur, we may be exposed to reduced profitability and cash flow strain or we may not be able to price new business at competitive rates.

Catastrophes may adversely impact liabilities for contract holder claims.

Our insurance operations are exposed to the risk of catastrophic mortality, such as a pandemic, an act of terrorism, natural disaster or other event that causes a large number of deaths or injuries. Significant influenza pandemics have occurred three times in the last century, but the likelihood, timing or severity of a future pandemic cannot be predicted. Additionally, the impact of climate change could cause changes in weather patterns, resulting in more severe and more frequent natural disasters such as forest fires, hurricanes, tornados, floods and storm surges. In our group insurance operations, a localized event that affects the workplace of one or more of our group insurance customers could cause a significant loss due to mortality or morbidity claims. These events could cause a material adverse effect on our results of operations in any period and, depending on their severity, could also materially and adversely affect our financial condition.

The extent of losses from a catastrophe is a function of both the total amount of insured exposure in the area affected by the event and the severity of the event. Pandemics, natural disasters and man-made catastrophes, including terrorism, may produce significant damage in larger areas, especially those that are heavily populated. Claims resulting from natural or man-made catastrophic events could cause substantial volatility in our financial results for any fiscal quarter or year and could materially reduce our profitability or harm our financial condition. Also, catastrophic events could harm the financial condition of our reinsurers and thereby increase the probability of default on reinsurance recoveries. Accordingly, our ability to write new business could also be affected.

Consistent with industry practice and accounting standards, we establish liabilities for claims arising from a catastrophe only after assessing the probable losses arising from the event. We cannot be certain that the liabilities we have established or applicable reinsurance will be adequate to cover actual claim liabilities, and a catastrophic event or multiple catastrophic events could have a material adverse effect on our business, results of operations and financial condition.

Operational Matters

Our enterprise risk management policies and procedures may leave us exposed to unidentified or unanticipated risk, which could negatively affect our businesses or result in losses.

We have devoted significant resources to develop our enterprise risk management policies and procedures and expect to continue to do so in the future. Nonetheless, our policies and procedures to identify, monitor and manage risks may not be fully effective. Many of our methods of managing risk and exposures are based upon our use of observed historical market behavior or statistics based on historical models. As a result, these methods may not predict future exposures, which could be significantly greater than the historical measures indicate, such as the risk of pandemics causing a large number of deaths. Other risk management methods depend upon the evaluation of information regarding markets, clients, catastrophe occurrence or other matters that is publicly available or otherwise accessible to us, which may not always be accurate, complete, up-to-date or properly evaluated. Management of operational, legal and regulatory risks requires, among other things, policies and procedures to record properly and verify a large number of transactions and events, and these policies and procedures may not be fully effective.

We face risks of non-collectability of reinsurance and increased reinsurance rates, which could materially affect our results of operations.

We follow the insurance practice of reinsuring with other insurance and reinsurance companies a portion of the risks under the policies written by our insurance subsidiaries (known as “ceding”). As of December 31, 2014, we ceded \$292.8 billion of life insurance in force to reinsurers for reinsurance protection. Although reinsurance does not discharge our subsidiaries from their primary obligation to pay contract holders for losses insured under the policies we issue, reinsurance does make the assuming reinsurer liable to the insurance subsidiaries for the reinsured portion of the risk. As of December 31, 2014, we had \$5.7 billion of reinsurance receivables from reinsurers for paid and unpaid losses, for which they are obligated to reimburse us under our reinsurance contracts. Of this amount, \$2.5 billion related to the sale of our reinsurance business to Swiss Re in 2001 through an indemnity reinsurance agreement. Swiss Re has funded a trust to support this business. The balance in the trust changes as a result of ongoing reinsurance activity and was \$2.6 billion as of December 31, 2014. Furthermore, \$764 million of the Swiss Re treaties are funds withheld structures where we have a right of offset on assets backing the reinsurance receivables.

The balance of the reinsurance is due from a diverse group of reinsurers. The collectability of reinsurance is largely a function of the solvency of the individual reinsurers. We perform annual credit reviews on our reinsurers, focusing on, among other things, financial capacity, stability, trends and commitment to the reinsurance business. We also require assets in trust, LOCs or other acceptable collateral to support balances due from reinsurers not authorized to transact business in the applicable jurisdictions. Despite these measures, a reinsurer’s insolvency, inability or unwillingness to make payments under the terms of a reinsurance contract, especially Swiss Re, could have a material adverse effect on our results of operations and financial condition.

Reinsurers also may attempt to increase rates with respect to our existing reinsurance arrangements. The ability of our reinsurers to increase rates depends upon the terms of each reinsurance contract. An increase in reinsurance rates may affect the profitability of our insurance business.

Competition for our employees is intense, and we may not be able to attract and retain the highly skilled people we need to support our business.

Our success depends, in large part, on our ability to attract and retain key people. Intense competition exists for the key employees with demonstrated ability, and we may be unable to hire or retain such employees. The unexpected loss of services of one or more of our key personnel could have a material adverse effect on our operations due to their skills, knowledge of our business, their years of industry experience and the potential difficulty of promptly finding qualified replacement employees. We compete with other financial institutions primarily on the basis of our products, compensation, support services and financial condition. Sales in our businesses and our results of operations and financial condition could be materially adversely affected if we are unsuccessful in attracting and retaining key employees, including financial advisors, wholesalers and other employees, as well as independent distributors of our products.

We may not be able to protect our intellectual property and may be subject to infringement claims.

We rely on a combination of contractual rights and copyright, trademark, patent and trade secret laws to establish and protect our intellectual property. Although we use a broad range of measures to protect our intellectual property rights, third parties may infringe or misappropriate our intellectual property. We may have to litigate to enforce and protect our copyrights, trademarks, patents, trade secrets and know-how or to determine their scope, validity or enforceability, which represents a diversion of resources that may be significant in amount and may not prove successful. Additionally, complex legal and factual determinations and evolving laws and court interpretations make the scope of protection afforded our intellectual property uncertain, particularly in relation to our patents. While we believe our patents provide us with a competitive advantage, we cannot be certain that any issued patents will be interpreted with sufficient breadth to offer meaningful protection. In addition, our issued patents may be successfully challenged, invalidated, circumvented or found unenforceable so that our patent rights would not create an effective competitive barrier. The loss of intellectual property protection or the inability to secure or enforce the protection of our intellectual property assets could have a material adverse effect on our business and our ability to compete.

We also may be subject to costly litigation in the event that another party alleges our operations or activities infringe upon another party's intellectual property rights. Third parties may have, or may eventually be issued, patents that could be infringed by our products, methods, processes or services. Any party that holds such a patent could make a claim of infringement against us. We may also be subject to claims by third parties for breach of copyright, trademark, trade secret or license usage rights. Any such claims and any resulting litigation could result in significant liability for damages. If we were found to have infringed a third-party patent or other intellectual property rights, we could incur substantial liability, and in some circumstances could be enjoined from providing certain products or services to our customers or utilizing and benefiting from certain methods, processes, copyrights, trademarks, trade secrets or licenses, or alternatively could be required to enter into costly licensing arrangements with third parties, all of which could have a material adverse effect on our business, results of operations and financial condition.

Our information systems may experience interruptions or breaches in security.

Our information systems are critical to the operation of our business. We collect, process, maintain, retain and distribute large amounts of personal financial and health information and other confidential and sensitive data about our customers in the ordinary course of our business. Our business therefore depends on our customers' willingness to entrust us with their personal information. Any failure, interruption or breach in security could result in disruptions to our critical systems and adversely affect our customer relationships. While we employ a robust and tested information security program, there can be no assurance that any such failure, interruption or security breach will not occur or, if any does occur, that it can be sufficiently remediated. Although hackers have attempted and continue to try to infiltrate our computer systems, to date, we have not had a material security breach. The occurrence of any such failure, interruption or security breach of our systems could damage our reputation, result in a loss of customer business, subject us to additional regulatory scrutiny, or expose us to civil litigation and financial liability.

Covenants and Ratings

A downgrade in our financial strength or credit ratings could limit our ability to market products, increase the number or value of policies being surrendered and/or hurt our relationships with creditors.

Nationally recognized rating agencies rate the financial strength of our principal insurance subsidiaries and rate our debt. Ratings are not recommendations to buy our securities. Each of the rating agencies reviews its ratings periodically, and our current ratings may not be maintained in the future.

Our financial strength ratings, which are intended to measure our ability to meet contract holder obligations, are an important factor affecting public confidence in most of our products and, as a result, our competitiveness. A downgrade of the financial strength rating of one of our principal insurance subsidiaries could affect our competitive position in the insurance industry by making it more difficult for us to market our products as potential customers may select companies with higher financial strength ratings and by leading to increased withdrawals by current customers seeking companies with higher financial strength ratings. This could lead to a decrease in fees as net outflows of assets increase, and therefore, result in lower fee income. Furthermore, sales of assets to meet customer withdrawal demands could also result in losses, depending on market conditions. The interest rates we pay on our borrowings are largely dependent on our credit ratings. A downgrade of our debt ratings could affect our ability to raise additional debt, including bank lines of credit, with terms and conditions similar to our current debt, and accordingly, likely increase our cost of capital.

All of our ratings and ratings of our principal insurance subsidiaries are subject to revision or withdrawal at any time by the rating agencies, and therefore, no assurance can be given that our principal insurance subsidiaries or we can maintain these ratings. See “Item 1. Business – Financial Strength Ratings” and “Liquidity and Capital Resources – Sources of Liquidity and Cash Flow” in the MD&A for a description of our ratings.

We will be required to pay interest on our capital securities with proceeds from the issuance of qualifying securities if we fail to achieve capital adequacy or net income and stockholders' equity levels.

As of December 31, 2014, we had approximately \$1.2 billion in principal amount of capital securities outstanding. All of the capital securities contain covenants that require us to make interest payments in accordance with an alternative coupon satisfaction mechanism ("ACSM") if we determine that one of the following triggers exists as of the 30th day prior to an interest payment date, or the "determination date":

1. LNL's RBC ratio is less than 175% (based on the most recent annual financial statement filed with the State of Indiana); or
2. (i) The sum of our consolidated net income for the four trailing fiscal quarters ending on the quarter that is two quarters prior to the most recently completed quarter prior to the determination date is zero or negative, and (ii) our consolidated stockholders' equity (excluding accumulated OCI and any increase in stockholders' equity resulting from the issuance of preferred stock during a quarter), or "adjusted stockholders' equity," as of (x) the most recently completed quarter and (y) the end of the quarter that is two quarters before the most recently completed quarter, has declined by 10% or more as compared to the quarter that is ten fiscal quarters prior to the last completed quarter, or the "benchmark quarter."

The ACSM would generally require us to use commercially reasonable efforts to satisfy our obligation to pay interest in full on the capital securities with the net proceeds from sales of our common stock and warrants to purchase our common stock with an exercise price greater than the market price. We would have to utilize the ACSM until the trigger events above no longer existed, and, in the case of test 2 above, until our adjusted stockholders' equity amount increased or declined by less than 10% as compared to the adjusted stockholders' equity at the end of the benchmark quarter for each interest payment date as to which interest payment restrictions were imposed by test 2 above.

If we were required to utilize the ACSM and were successful in selling sufficient shares of common stock or warrants to satisfy the interest payment, we would dilute the current holders of our common stock. Furthermore, while a trigger event is occurring and if we do not pay accrued interest in full, we may not, among other things, pay dividends on or repurchase our capital stock. Our failure to pay interest pursuant to the ACSM will not result in an event of default with respect to the capital securities, nor will a nonpayment of interest, unless it lasts for ten consecutive years, although such breaches may result in monetary damages to the holders of the capital securities.

The calculations of RBC, net income (loss) and adjusted stockholders' equity are subject to adjustments and the capital securities are subject to additional terms and conditions as further described in supplemental indentures filed as exhibits to our Forms 8-K filed on March 13, 2007, and May 17, 2006.

Certain blocks of our insurance business purchased from third-party insurers under indemnity reinsurance agreements may require us to place assets in trust, secure letters of credit or return the business, if the financial strength ratings and/or capital ratios of certain insurance subsidiaries are not maintained at specified levels.

Under certain indemnity reinsurance agreements, two of our insurance subsidiaries, LNL and LLANY, provide 100% indemnity reinsurance for the business assumed; however, the third-party insurer, or the “cedent,” remains primarily liable on the underlying insurance business. Under these types of agreements, as of December 31, 2014, we held statutory reserves of \$6.4 billion. These indemnity reinsurance arrangements require that our subsidiary, as the reinsurer, maintain certain insurer financial strength ratings and capital ratios. If these ratings or capital ratios are not maintained, depending upon the reinsurance agreement, the cedent may recapture the business, or require us to place assets in trust or provide LOCs at least equal to the relevant statutory reserves. Under the LNL reinsurance arrangement, we held approximately \$3.7 billion of statutory reserves. LNL must maintain an A.M. Best financial strength rating of at least B++, an S&P financial strength rating of at least BBB- and a Moody’s financial strength rating of at least Baa3. This arrangement may require LNL to place assets in trust equal to the relevant statutory reserves. Under LLANY’s largest indemnity reinsurance arrangement, we held approximately \$1.9 billion of statutory reserves as of December 31, 2014. LLANY must maintain an A.M. Best financial strength rating of at least B+, an S&P financial strength rating of at least BB+ and a Moody’s financial strength rating of at least Ba1, as well as maintain an RBC ratio of at least 160% or an S&P capital adequacy ratio of 100%, or the cedent may recapture the business. Under two other LLANY arrangements, by which we established \$805 million of statutory reserves, LLANY must maintain an A.M. Best financial strength rating of at least B++, an S&P financial strength rating of at least BBB- and a Moody’s financial strength rating of at least Baa3. One of these arrangements also requires LLANY to maintain an RBC ratio of at least 185% or an S&P capital adequacy ratio of 115%. Each of these arrangements may require LLANY to place assets in trust equal to the relevant statutory reserves. As of December 31, 2014, LNL’s and LLANY’s RBC ratios exceeded the required ratio. See “Item 1. Business – Financial Strength Ratings” for a description of our financial strength ratings.

If the cedent recaptured the business, LNL and LLANY would be required to release reserves and transfer assets to the cedent. Such a recapture could adversely impact our future profits. Alternatively, if LNL and LLANY established a security trust for the cedent, the ability to transfer assets out of the trust could be severely restricted, thus negatively impacting our liquidity.

Investments

Some of our investments are relatively illiquid and are in asset classes that have been experiencing significant market valuation fluctuations.

We hold certain investments that may lack liquidity, such as privately placed fixed maturity securities, mortgage loans, policy loans and other limited partnership interests. These asset classes represented 24% of the carrying value of our total cash and invested assets as of December 31, 2014.

If we require significant amounts of cash on short notice in excess of normal cash requirements or are required to post or return collateral in connection with our investment portfolio, derivatives transactions or securities lending activities, we may have difficulty selling these investments in a timely manner, be forced to sell them for less than we otherwise would have been able to realize, or both.

The reported value of our relatively illiquid types of investments, our investments in the asset classes described in the paragraph above and, at times, our high quality, generally liquid asset classes, do not necessarily reflect the lowest current market price for the asset. If we were forced to sell certain of our assets in the current market, there can be no assurance that we would be able to sell them for the prices at which we have recorded them, and we might be forced to sell them at significantly lower prices.

We invest a portion of our invested assets in investment funds, many of which make private equity investments. The amount and timing of income from such investment funds tends to be uneven as a result of the performance of the underlying investments, including private equity investments. The timing of distributions from the funds, which depends on particular events relating to the underlying investments, as well as the funds' schedules for making distributions and their needs for cash, can be difficult to predict. As a result, the amount of income that we record from these investments can vary substantially from quarter to quarter.

Defaults on our mortgage loans and write downs of mortgage equity may adversely affect our profitability.

Our mortgage loans face default risk and are principally collateralized by commercial properties. The performance of our mortgage loan investments may fluctuate in the future. In addition, some of our mortgage loan investments have balloon payment maturities. An increase in the default rate of our mortgage loan investments could have a material adverse effect on our business, results of operations and financial condition.

Further, any geographic or sector exposure in our mortgage loans may have adverse effects on our investment portfolios and consequently on our consolidated results of operations or financial condition. While we seek to mitigate this risk by having a broadly diversified portfolio, events or developments that have a negative effect on any particular geographic region or sector may have a greater adverse effect on the investment portfolios to the extent that the portfolios are exposed.

The difficulties faced by other financial institutions could adversely affect us.

We have exposure to many different industries and counterparties, and routinely execute transactions with counterparties in the financial services industry, including brokers and dealers, commercial banks, investment banks and other institutions. Many of these transactions expose us to credit risk in the event of default of our counterparty. In addition, with respect to secured transactions, our credit risk may be exacerbated when the collateral held by us cannot be realized upon or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure due to it. We also may have exposure to these financial institutions in the form of unsecured debt instruments, derivative transactions and/or equity investments. These parties may default on their obligations to us due to bankruptcy, lack of liquidity, downturns in the economy or real estate values, operational failure, corporate governance issues or other reasons. A downturn in the U.S. and other economies could result in increased impairments. There can be no assurance that any such losses or impairments to the carrying value of these assets would not materially and adversely affect our business and results of operations.

Our requirements to post collateral or make payments related to declines in market value of specified assets may adversely affect our liquidity and expose us to counterparty credit risk.

Many of our transactions with financial and other institutions, including settling futures positions, specify the circumstances under which the parties are required to post collateral. The amount of collateral we may be required to post under these agreements may increase under certain circumstances, which could adversely affect our liquidity. In addition, under the terms of some of our transactions, we may be required to make payments to our counterparties related to any decline in the market value of the specified assets.

Our investments are reflected within our consolidated financial statements utilizing different accounting bases, and, accordingly, there may be significant differences between cost and fair value that are not recorded in our consolidated financial statements.

Our principal investments are in fixed maturity and equity securities, mortgage loans on real estate, policy loans, short-term investments, derivative instruments, limited partnerships and other invested assets. The carrying value of such investments is as follows:

- Fixed maturity and equity securities are classified as AFS, except for those designated as trading securities, and are reported at their estimated fair value. The difference between the estimated fair value and amortized cost of such securities (i.e., unrealized investment gains and losses) is recorded as a separate component of OCI, net of adjustments to DAC, contract holder related amounts and deferred income taxes;

- Fixed maturity and equity securities designated as trading securities are recorded at fair value with subsequent changes in fair value recognized in realized gain (loss). However, in certain cases, the trading securities support reinsurance arrangements. In those cases, offsetting the changes to fair value of the trading securities are corresponding changes in the fair value of the embedded derivative liability associated with the underlying reinsurance arrangement. In other words, the investment results for the trading securities, including gains and losses from sales, are passed directly to the reinsurers through the contractual terms of the reinsurance arrangements. These types of securities represent 60% of our trading securities;
- Short-term investments include investments with remaining maturities of one year or less, but greater than three months, at the time of acquisition and are stated at amortized cost, which approximates fair value;
- Also, mortgage loans on real estate are carried at unpaid principal balances, adjusted for any unamortized premiums or discounts and deferred fees or expenses, net of valuation allowances;
- Policy loans are carried at unpaid principal balances;
- Real estate joint ventures and other limited partnership interests are carried using the equity method of accounting; and
- Other invested assets consist principally of derivatives with positive fair values. Derivatives are carried at fair value with changes in fair value reflected in income from non-qualifying derivatives and derivatives in fair value hedging relationships. Derivatives in cash flow hedging relationships are reflected as a separate component of OCI.

Investments not carried at fair value on our consolidated financial statements, principally, mortgage loans, policy loans and real estate, may have fair values that are substantially higher or lower than the carrying value reflected on our consolidated financial statements. In addition, unrealized losses are not reflected in net income unless we realize the losses by either selling the security at below amortized cost or determine that the decline in fair value is deemed to be other-than-temporary (i.e., impaired). Each of such asset classes is regularly evaluated for impairment under the accounting guidance appropriate to the respective asset class.

Competition

Intense competition could negatively affect our ability to maintain or increase our profitability.

Our businesses are intensely competitive. We compete based on a number of factors, including name recognition, service, the quality of investment advice, investment performance, product features, price, perceived financial strength and claims-paying and credit ratings. Our competitors include insurers, broker-dealers, financial advisors, asset managers, hedge funds and other financial institutions. A number of our business units face competitors that have greater market share, offer a broader range of products or have higher financial strength or credit ratings than we do.

In recent years, there has been consolidation and convergence among companies in the financial services industry resulting in increased competition from large, well-capitalized financial services firms. Many of these firms also have been able to increase their distribution systems through mergers or contractual arrangements. Furthermore, larger competitors may have lower operating costs and an ability to absorb greater risk while maintaining their financial strength ratings, thereby allowing them to price their products more competitively.

Our sales representatives are not captive and may sell products of our competitors.

We sell our annuity and life insurance products through independent sales representatives. These representatives are not captive, which means they may also sell our competitors' products. If our competitors offer products that are more attractive than ours, or pay higher commission rates to the sales representatives than we do, these representatives may concentrate their efforts in selling our competitors' products instead of ours.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

As of December 31, 2014, LNC and our subsidiaries owned or leased approximately 3.3 million square feet of office space. We leased 0.1 million square feet of office space in Philadelphia, Pennsylvania for LFN. We leased 0.2 million square feet of office space in Radnor, Pennsylvania for our corporate center and for LFD. We owned or leased 0.8 million square feet of office space in Fort Wayne, Indiana, primarily for our Annuities and Retirement Plan Services segments. We owned or leased 0.8 million square feet of office space in Greensboro, North Carolina, primarily for our Life Insurance segment. We owned or leased 0.3 million square feet of office space in Omaha, Nebraska, primarily for our Group Protection segment. An additional 1.1 million square feet of office space is owned or leased in other U.S. cities for branch offices. As provided in Note 13, the rental expense on operating leases for office space and equipment was \$44 million for 2014. This discussion regarding properties does not include information on investment properties.

Item 3. Legal Proceedings

For information regarding legal proceedings, see “Regulatory and Litigation Matters” in Note 13, which is incorporated herein by reference.

Item 4. Mine Safety Disclosures

Not applicable.

Executive Officers of the Registrant

Executive Officers of the Registrant as of February 18, 2015, were as follows:

Name	Age (1)	Position with LNC and Business Experience During the Past Five Years
Dennis R. Glass	65	President, Chief Executive Officer and Director (since July 2007). President, Chief Operating Officer and Director (April 2006 - July 2007).
Lisa M. Buckingham	49	Executive Vice President, Chief Human Resources Officer (since March 2011). Senior Vice President, Chief Human Resources Officer (December 2008 - March 2011).
Adam G. Ciongoli	46	Executive Vice President and General Counsel (since May 2012). General Counsel, Willis Group Holdings Plc, a global insurance broker (March 2007 - May 2012).
Ellen Cooper	50	Executive Vice President and Chief Investment Officer (since August 2012). Managing Director, Goldman Sachs Asset Management, an asset management firm (July 2008 - August 2012).
Charles C. Cornelio	55	President, Retirement Plan Services (since December 2009). Executive Vice President, Chief Administrative Officer (Since November 2008). Senior Vice President, Shared Services and Chief Information Officer (April 2006 - November 2008).
Randal J. Freitag	52	Executive Vice President and Chief Financial Officer (since January 2011). Senior Vice President, Chief Risk Officer (2007 - December 2010). Senior Vice President, Chief Risk Officer and Treasurer (2007 - October 2009).
Wilford H. Fuller	44	President, Lincoln Financial Group Distribution (since October 2012). Executive Vice President (since March 2011). President and CEO, Lincoln Financial Distributors(2) (since February 2009).
Mark E. Konen	55	President, Insurance and Retirement Solutions (since July 2008 and February 2009, respectively). Executive Vice President (Since March 2011). President, Individual Markets (April 2006 - July 2008).

(1)Age shown is based on the officer's age as of February 18, 2015.

(2)Denotes an affiliate of LNC.

PART II

Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

(a) Stock Market and Dividend Information

Our common stock is traded on the New York stock exchange under the symbol LNC. As of February 18, 2015, the number of shareholders of record of our common stock was 7,898. The dividend on our common stock is declared each quarter by our Board of Directors if we are eligible to pay dividends and the Board determines that we will pay dividends. In determining dividends, the Board takes into consideration items such as our financial condition, including current and expected earnings, projected cash flows and anticipated financing needs. For potential restrictions on our ability to pay dividends, see “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations – Liquidity and Capital Resources” and Note 20 in the accompanying notes to the consolidated financial statements presented in “Item 8. Financial Statements and Supplementary Data,” as well as in “Part I – Item 1. Business – Regulatory – Insurance Regulation – Restriction on Subsidiaries’ Dividends and Other Payments.” The following presents the high and low prices for our common stock on the New York Stock Exchange during the periods indicated and the dividends declared per share during such periods:

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr
2014				
High	\$ 53.26	\$ 53.09	\$ 56.52	\$ 59.17
Low	45.71	45.61	50.08	45.25
Dividend declared	0.16	0.16	0.16	0.20
2013				
High	\$ 33.66	\$ 36.75	\$ 45.46	\$ 52.27
Low	26.69	30.04	36.72	40.84
Dividend declared	0.12	0.12	0.12	0.16

For information on securities authorized for issuance under equity compensation plans, see “Part III – Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters,” which is incorporated herein by reference.

(b) Not Applicable

(c) Issuer Purchases of Equity Securities

The following summarizes purchases of equity securities by the issuer during the quarter ended December 31, 2014 (dollars in millions, except per share data):

Period	(a) Total Number of Shares (or Units) Purchased (1)	(b) Average Price Paid per Share (or Unit)	(c) Total Number of Shares (or Units) Purchased as Part of Publicly Announced Plans or Programs (2)	(d) Approximate Dollar Value of Shares (or Units) that May Yet Be Purchased Under the Plans or Programs (2)(3)
10/1/14 – 10/31/14	-	\$ -	-	\$ 815
11/1/14 – 11/30/14	3,341,532	56.05	3,341,532	628
12/1/14 – 12/31/14	220,034	58.03	220,034	615

(1)Of the total number of shares purchased, no shares were received in connection with the exercise of stock options and related taxes. For the quarter ended December 31, 2014, there were 3,561,566 shares purchased as part of publicly announced plans or programs.

(2)On May 22, 2014, our Board of Directors authorized an increase in our securities repurchase authorization, bringing the total aggregate repurchase authorization to \$1.0 billion. As of December 31, 2014, our remaining security repurchase authorization was \$615 million. The security repurchase authorization does not have an expiration date. The amount and timing of share repurchase depends on key capital ratios, rating agency expectations, the generation of free cash flow and an evaluation of the costs and benefits associated with alternative uses of capital.

(3)As of the last day of the applicable month.

Item 6. Selected Financial Data

The following selected financial data (in millions, except per share data) should be read in conjunction with “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” and the accompanying notes to the consolidated financial statements presented in “Item 8. Financial Statements and Supplementary Data.”

	For the Years Ended December 31,				
	2014	2013	2012	2011	2010
Total revenues	\$ 13,554	\$ 11,969	\$ 11,535	\$ 10,641	\$ 10,415
Income (loss) from continuing operations	1,514	1,244	1,286	229	873
Net income (loss)	1,515	1,244	1,313	221	902
Per share data: (1)(2)					
Income (loss) from continuing operations – basic	5.81	4.68	4.58	0.75	2.28
Income (loss) from continuing operations – diluted	5.67	4.52	4.47	0.72	2.21
Net income (loss) – basic	5.81	4.68	4.68	0.72	2.37
Net income (loss) – diluted	5.67	4.52	4.56	0.69	2.30
Common stock dividends	0.680	0.520	0.360	0.230	0.080
	As of December 31,				
	2014	2013	2012	2011	2010
Assets	\$ 253,377	\$ 236,945	\$ 218,869	\$ 201,491	\$ 192,308
Long-term debt:					
Principal	5,023	5,273	5,173	5,088	5,363
Unamortized premiums (discounts) and fair value hedge on interest rate swap agreements	247	47	266	303	36
Stockholders’ equity	15,740	13,452	14,973	13,101	11,687
Per common share data: (1)					
Stockholders’ equity, including accumulated other comprehensive income (loss) (3)	61.35	51.17	55.14	44.94	37.00
Stockholders’ equity, excluding accumulated other comprehensive income (loss) (3)	49.29	45.23	41.11	35.75	34.30
Market value of common stock	57.67	51.62	25.90	19.42	27.81

(1) Per share amounts were affected by the retirement of 12.5 million, 12.0 million, 20.5 million, 24.7 million and 1.1 million shares of common stock during the years ended December 31, 2014, 2013, 2012, 2011 and 2010, respectively.

(2)To arrive at the income used in the calculation of our basic and diluted earnings per share, we deduct preferred stock dividends and accretion of discount, which amounted to \$167 million for the year ended December 31, 2010. In addition, to arrive at diluted earnings per share, if the effect of equity classification would result in a more dilutive earnings per share, we adjust the numerator used in the calculation of our diluted earnings per share to remove the mark-to-market adjustment for deferred units of LNC stock in our deferred compensation plans, which amounted to \$4 million, \$5 million and \$2 million for the years ending December 31, 2014, 2011 and 2010, respectively.

(3)Per share amounts are calculated under the assumption that our prior Series A preferred stock has been converted to common stock, but exclude the prior Series B preferred stock balances as it was non-convertible. Both the Series A and Series B preferred stock have been redeemed.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following Management's Discussion and Analysis ("MD&A") is intended to help the reader understand the financial condition as of December 31, 2014, compared with December 31, 2013, and the results of operations in 2014 and 2013, compared with the immediately preceding year of Lincoln National Corporation and its consolidated subsidiaries. Unless otherwise stated or the context otherwise requires, "LNC," "Company," "we," "our" or "us" refers to Lincoln National Corporation and its consolidated subsidiaries. The MD&A is provided as a supplement to, and should be read in conjunction with our consolidated financial statements and the accompanying notes to the consolidated financial statements ("Notes") presented in "Part II – Item 8. Financial Statements and Supplementary Data," as well as "Part I – Item 1A. Risk Factors" above.

In this report, in addition to providing consolidated revenues and net income (loss), we also provide segment operating revenues and income (loss) from operations because we believe they are meaningful measures of revenues and the profitability of our operating segments. Financial information that follows is presented in conformity with accounting principles generally accepted in the United States of America ("GAAP"), unless otherwise indicated. See Note 1 for a discussion of GAAP.

Operating revenues and income (loss) from operations are the financial performance measures we use to evaluate and assess the results of our segments. Accordingly, we define and report operating revenues and income (loss) from operations by segment in Note 22. Our management believes that operating revenues and income (loss) from operations explain the results of our ongoing businesses in a manner that allows for a better understanding of the underlying trends in our current businesses because the excluded items are unpredictable and not necessarily indicative of current operating fundamentals or future performance of the business segments, and, in many instances, decisions regarding these items do not necessarily relate to the operations of the individual segments. In addition, we believe that our definitions of operating revenues and income (loss) from operations will provide investors with a more valuable measure of our performance because it better reveals trends in our business.

FORWARD-LOOKING STATEMENTS – CAUTIONARY LANGUAGE

Certain statements made in this report and in other written or oral statements made by us or on our behalf are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 ("PSLRA"). A forward-looking statement is a statement that is not a historical fact and, without limitation, includes any statement that may predict, forecast, indicate or imply future results, performance or achievements, and may contain words like: "believe," "anticipate," "expect," "estimate," "project," "will," "shall" and other words or phrases with similar meaning in connection with a discussion of future operating or financial performance. In particular, these include statements relating to future actions, trends in our businesses, prospective services or products, future performance or financial results and the outcome of contingencies, such as legal proceedings. We claim the protection afforded by the safe harbor for forward-looking statements provided by the PSLRA.

Forward-looking statements involve risks and uncertainties that may cause actual results to differ materially from the results contained in the forward-looking statements. Risks and uncertainties that may cause actual results to vary materially, some of which are described within the forward-looking statements, include, among others:

- Deterioration in general economic and business conditions that may affect account values, investment results, guaranteed benefit liabilities, premium levels, claims experience and the level of pension benefit costs, funding and investment results;
- Adverse global capital and credit market conditions could affect our ability to raise capital, if necessary, and may cause us to realize impairments on investments and certain intangible assets, including goodwill and the valuation allowance against deferred tax assets, which may reduce future earnings and/or affect our financial condition and ability to raise additional capital or refinance existing debt as it matures;
- Because of our holding company structure, the inability of our subsidiaries to pay dividends to the holding company in sufficient amounts could harm the holding company's ability to meet its obligations;
- Legislative, regulatory or tax changes, both domestic and foreign, that affect: the cost of, or demand for, our subsidiaries' products, the required amount of reserves and/or surplus, our ability to conduct business and our captive reinsurance arrangements as well as restrictions on revenue sharing and 12b-1 payments; and the potential for U.S. federal tax reform;
- Actions taken by reinsurers to raise rates on in-force business;
- Declines in or sustained low interest rates causing a reduction in investment income, the interest margins of our businesses, estimated gross profits ("EGPs") and demand for our products;
- Rapidly increasing interest rates causing contract holders to surrender life insurance and annuity policies, thereby causing realized investment losses, and reduced hedge performance related to variable annuities;
- Uncertainty about the effect of rules and regulations to be promulgated under the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act") on us and the economy and financial services sector in particular;
- The initiation of legal or regulatory proceedings against us, and the outcome of any legal or regulatory proceedings, such as: adverse actions related to present or past business practices common in businesses in which we compete; adverse decisions in significant actions including, but not limited to, actions brought by federal and state authorities and class action cases; new decisions that result in changes in law; and unexpected trial court rulings;
- A decline in the equity markets causing a reduction in the sales of our subsidiaries' products, a reduction of asset-based fees that our subsidiaries charge on various investment and insurance products, an acceleration of the net amortization of deferred acquisition

costs (“DAC”), value of business acquired (“VOBA”), deferred sales inducements (“DSI”) and deferred front-end loads (“DFEL”) and an increase in liabilities related to guaranteed benefit features of our subsidiaries’ variable annuity products;

- Ineffectiveness of our risk management policies and procedures, including various hedging strategies used to offset the effect of changes in the value of liabilities due to changes in the level and volatility of the equity markets and interest rates;
- A deviation in actual experience regarding future persistency, mortality, morbidity, interest rates or equity market returns from the assumptions used in pricing our subsidiaries’ products, in establishing related insurance reserves and in the net amortization of DAC, VOBA, DSI and DFEL, which may reduce future earnings;
- Changes in GAAP, including convergence with International Financial Reporting Standards (“IFRS”), that may result in unanticipated changes to our net income;
- Lowering of one or more of our debt ratings issued by nationally recognized statistical rating organizations and the adverse effect such action may have on our ability to raise capital and on our liquidity and financial condition;
- Lowering of one or more of the insurer financial strength ratings of our insurance subsidiaries and the adverse effect such action may have on the premium writings, policy retention, profitability of our insurance subsidiaries and liquidity;
- Significant credit, accounting, fraud, corporate governance or other issues that may adversely affect the value of certain investments in our portfolios, as well as counterparties to which we are exposed to credit risk, requiring that we realize losses on investments;
- Inability to protect our intellectual property rights or claims of infringement of the intellectual property rights of others;
- Interruption in telecommunication, information technology or other operational systems or failure to safeguard the confidentiality or privacy of sensitive data on such systems from cyberattacks or other breaches of our data security systems;
- The effect of acquisitions and divestitures, restructurings, product withdrawals and other unusual items;
- The adequacy and collectability of reinsurance that we have purchased;
- Acts of terrorism, a pandemic, war or other man-made and natural catastrophes that may adversely affect our businesses and the cost and availability of reinsurance;
- Competitive conditions, including pricing pressures, new product offerings and the emergence of new competitors, that may affect the level of premiums and fees that our subsidiaries can charge for their products;
- The unknown effect on our subsidiaries’ businesses resulting from changes in the demographics of their client base, as aging baby-boomers move from the asset-accumulation stage to the asset-distribution stage of life; and
- Loss of key management, financial planners or wholesalers.

The risks included here are not exhaustive. Other sections of this report, quarterly reports on Form 10-Q, current reports on Form 8-K and other documents filed with the Securities and Exchange Commission (“SEC”) include additional factors that could affect our businesses and financial performance, including “Part I – Item 1A. Risk Factors” and “Item 7A. Quantitative and Qualitative Disclosures About Market Risk,” which are incorporated herein by reference. Moreover, we operate in a rapidly changing and competitive environment. New risk factors emerge from time to time, and it is not possible for management to predict all such risk factors.

Further, it is not possible to assess the effect of all risk factors on our businesses or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements. Given these risks and uncertainties, investors should not place undue reliance on forward-looking statements as a prediction of actual results. In addition, we disclaim any obligation to update any forward-looking statements to reflect events or circumstances that occur after the date of this report.

INTRODUCTION

Executive Summary

We are a holding company that operates multiple insurance and retirement businesses through subsidiary companies. Through our business segments, we sell a wide range of wealth protection, accumulation and retirement income products and solutions. These products include fixed and indexed annuities, variable annuities, universal life insurance (“UL”), variable universal life insurance (“VUL”), linked-benefit UL, indexed universal life insurance (“IUL”), term life insurance, employer-sponsored retirement plans and services, and group life, disability and dental.

We provide products and services and report results through our Annuities, Retirement Plan Services, Life Insurance and Group Protection segments. We also have Other Operations. These segments and Other Operations are described in “Part I – Item 1. Business” above.

For information on how we derive our revenues, see the discussion in results of operations by segment below.

Current Market Conditions

Although improvements in certain market conditions have occurred during 2014, the following factors are weighing on and threatening continued economic recovery and financial stability:

- Increased market volatility (i.e., commodities, currencies and equities);
- Global growth and deflation concerns; and

- Federal Reserve maintaining interest rates at low levels.

The Federal Reserve's forecast for 2015, as reported in December of 2014, leaves its broader projections for economic growth little changed. However, its outlook for unemployment has modestly improved while its inflation forecast will remain below its target of 2%. In the face of these economic challenges, we are focused on building our businesses through these challenging markets by continuing to reprice products, expand distribution into new and existing key accounts and channels and target market segments that have high growth potential while maintaining a disciplined approach to managing our expenses.

Significant Operational Matters

Earnings from Account Values

The Annuities and Retirement Plan Services segments are the most sensitive to the equity markets, as well as, to a lesser extent, our Life Insurance segment. We discuss the earnings effect of the equity markets on account values and the related asset-based earnings below in "Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Equity Market Risk – Effect of Equity Market Sensitivity." Account values increased \$11.0 billion during 2014 driven primarily by an increase in equity markets and positive net flows.

Variable Annuity Hedge Program Performance

We offer variable annuity products with living benefit guarantees. As described below in "Critical Accounting Policies and Estimates – Derivatives – GLB," we use derivative instruments to hedge our exposure to the risks and earnings volatility that result from the guaranteed living benefit ("GLB") embedded derivatives in certain of our variable annuity products. The change in fair value of these instruments tends to move in the opposite direction of the change in embedded derivative reserves. These results are excluded from the Annuities and Retirement Plan Services segments' operating revenues and income (loss) from operations. See "Realized Gain (Loss) and Benefit Ratio Unlocking – Variable Annuity Net Derivatives Results" below for information on our methodology for calculating the non-performance risk ("NPR"), which affects the discount rate used in the calculation of the GLB embedded derivative reserves.

We also offer variable annuity products with death benefit guarantees. As described below in "Critical Accounting Policies and Estimates – Future Contract Benefits and Other Contract Holder Obligations – GDB," we use derivative instruments to attempt to hedge the income statement effect in the opposite direction of the guaranteed death benefit ("GDB") benefit ratio unlocking for movements in equity markets. These results are excluded from income (loss) from operations.

The costs of derivative instruments that we use to hedge these variable annuity products may increase as a result of the low interest rate environment.

Products

We remain focused on shifting our production to more non-guaranteed products, increasing our margins related to mortality and morbidity and increasing the portion of our employee-paid group business.

Sources of Earnings

We monitor our sources of earnings as a factor in managing our businesses. This information may be useful in determining opportunities for improving overall profitability. We are focused on achieving our long-term goal of increasing mortality and morbidity margins. Growth in this source of earnings component could be driven by a number of factors, including, but not limited to, pricing actions on our life and group non-medical products and acquiring blocks of mortality/morbidity business. The following table presents the sources of earnings components of income (loss) from operations, before income taxes, excluding Other Operations:

	For the Years Ended December		
	31, 2014	2013	2012
Investment spread (1)	33.6%	37.8%	41.7%
Mortality/morbidity (2)	22.8%	24.9%	28.1%
Fees on AUM (3)	36.5%	31.9%	27.4%
VA riders (4)	7.1%	5.4%	2.8%
Total	100.0%	100.0%	100.0%

- (1) Investment spread earnings consist primarily of net investment income, net of interest credited, earned on the underlying general account investments supporting our fixed products less related expenses.
- (2) Mortality/morbidity earnings result from mortality margins, morbidity margins, and certain expense assessments and related fees that are a function of the rates priced into the product and level of insurance in force.
- (3) Fees on assets under management (“AUM”) earnings consist primarily of asset-based fees charged on variable account values less associated benefits and related expenses.
- (4) Variable annuity (“VA”) riders’ earnings consist of fees charged to the contract holder related to guaranteed benefit rider features, less the net valuation premium and associated change in benefit reserves and related expenses.

See Note 22 for additional information on income (loss) from operations by segment.

Interest Rate Risk

Because the profitability of our business depends in part on interest rate spreads, interest rate fluctuations could negatively affect our profitability. Changes in interest rates may reduce both our profitability from spread businesses and our return on invested capital. Thus, low interest rates negatively impact margins while rapidly rising interest rates can result in increased surrenders. Gradually rising interest rates are likely to be beneficial to our profitability. Some of our products, principally our fixed annuities, UL and VUL, have interest rate guarantees that expose us to the risk that changes in interest rates or prolonged low interest rates will reduce our spread, or the difference between the interest that we are required to credit to contracts and the yields that we are able to earn on our general account investments supporting our obligations under the contracts. Although we have been proactive in our investment

strategies, product designs, crediting rate strategies and overall asset-liability practices to mitigate the risk of unfavorable consequences in this type of environment, declines in our spread, or instances where the returns on our general account investments are not enough to support the interest rate guarantees on these products, could have an adverse effect on some of our businesses or results of operations.

We have provided disclosures around the effects of sustained low interest rates in “Part I – Item 1A. Risk Factors – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals” and “Effect of Interest Rate Sensitivity” and “Interest Rate Risk on Fixed Insurance Businesses – Falling Rates” in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

Improvement of Return on Equity

One of our highest priorities continues to be increasing our return on equity (“ROE”). Growth in ROE will be driven by a number of items including:

- Earnings mix shift to businesses with higher returns;
- Sales of products that have higher returns than the products already in force; and
- Capital management actions consisting of redeployment of excess capital (including returning capital to common stockholders) and further generation of excess capital.

Strategic Investments

We continue to make strategic investments in our businesses to grow revenues, further spur productivity and improve our efficiency and service to our customers. These efforts include investments in technology and system upgrades, new products for the voluntary market and expanded distribution focus.

Industry Trends

We continue to be influenced by a variety of trends that affect the industry.

Regulatory Changes

U.S.-domiciled insurance entities are regulated at the state level, while certain products and services are also subject to federal regulation. Regulators may refine capital requirements and introduce new reserving standards for the life insurance industry. Regulations recently adopted or currently under review, such as Actuarial Guideline 48 (“AG48”) regulating the terms of captive arrangements, can potentially affect the capital requirements and profitability of the industry and result in increased regulation and oversight for the industry. In addition, changes in GAAP, as well as the methodologies, estimations and assumptions thereunder, may result in unanticipated changes to our net income. See “Part I – Item 1. Business – Regulatory” for a discussion of the potential effects of regulatory changes on our industry.

Financial Environment

The level of long-term interest rates and the shape of the yield curve can have a negative effect on the demand for and the profitability of spread-based products such as fixed annuities and UL. A flat or inverted yield curve and low long-term interest rates will be a concern if new money rates on corporate bonds are lower than our overall life insurer investment portfolio yields. Equity market performance can also affect the profitability of life insurers, as product demand and fee income from variable annuities and fee income from pension products tied to separate account balances often reflect equity market performance. A steady economy is important as it provides for continuing demand for insurance and investment-type products. Insurance premium growth, with respect to group life and disability products, for example, is closely tied to employers’ total payroll growth. Additionally, the potential market for these products is expanded by new business creation.

Demographics

In the coming decade, a key driver shaping the actions of the insurance industry will be the escalation of income protection and wealth accumulation goals and needs of the retiring baby-boomers. As a result of increasing longevity, retirees will need to accumulate sufficient savings to finance retirements that may span 30 or more years. Helping the baby-boomers to accumulate assets for retirement and subsequently to convert these assets into retirement income represents an opportunity for the insurance industry.

Insurers are well positioned to address the baby-boomers' rapidly increasing need for savings tools and for income protection. We believe that, among insurers, those with strong brands, high financial strength ratings and broad distribution are best positioned to capitalize on the opportunity to offer income protection products to baby-boomers.

Moreover, the insurance industry's products, and the needs they are designed to address, are complex. We believe that individuals approaching retirement age will need to seek information to plan for and manage their retirements. In the workplace, as employees take greater responsibility for their benefit options and retirement planning, they will need information about their possible individual needs. One of the challenges for the insurance industry will be the delivery of this information in a cost effective manner.

Competitive Pressures

The insurance industry remains highly competitive. The product development and product life cycles have shortened in many product segments, leading to more intense competition with respect to product features. Larger companies have the ability to invest in brand equity, product development, technology and risk management, which are among the fundamentals for sustained profitable growth in the life insurance industry. In addition, several of the industry's products can be quite homogeneous and subject to intense price competition. Sufficient scale, financial strength and financial flexibility are becoming prerequisites for sustainable growth in the life insurance industry. Larger market participants tend to have the capacity to invest in additional distribution capability and the information technology needed to offer the superior customer service demanded by an increasingly sophisticated industry client base.

Issues and Outlook

Going into 2015, significant issues include:

- Ongoing actions by government and regulatory authorities to review, introduce regulations or change existing regulations or guidance in a manner that could have a significant effect on our capital, earnings and/or business models;
- A low interest rate environment in comparison to historical periods; and
- Potential volatility in the capital markets.

In the face of these issues and potential issues, we expect to focus on the following:

- Closely monitoring ongoing activities in the legal and regulatory environment and taking an active role in the legislative and/or regulatory process;
- Continuing to explore additional financing strategies addressing the statutory reserve strain related to our term products and UL products containing secondary guarantees in order to manage our capital position effectively;
- Shifting our new business mix to focus on products with shorter duration liabilities, more limited guarantees and sources of earnings from mortality and morbidity margins;
- Closely monitoring our capital and liquidity positions taking into account changing economic conditions and monetary policy, ongoing regulatory activities regarding statutory reserves and captive structures, and our capital deployment strategy;
 - Maintaining the flexibility to increase the risk profile of assets within our investment portfolio;
- Continuing to make investments in our businesses, primarily in technology and distribution, to grow revenues and drive margin expansion; and
- Managing our expenses aggressively through process improvement initiatives combined with continued financial discipline and execution excellence throughout our operations.

For additional factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Critical Accounting Policies and Estimates

We have identified the accounting policies below as critical to the understanding of our results of operations and our financial condition. In applying these critical accounting policies in preparing our financial statements, management must use critical assumptions, estimates and judgments concerning future results or other developments, including the likelihood, timing or amount of one or more future events. Actual results may differ from these estimates under different assumptions or conditions. On an ongoing basis, we evaluate our assumptions, estimates and judgments based upon historical experience and various other information that we believe to be reasonable under the circumstances. For a detailed discussion of other significant accounting policies, see Note 1.

DAC, VOBA, DSI and DFEL

Accounting for intangible assets requires numerous assumptions, such as estimates of expected future profitability for our operations and our ability to retain existing blocks of life and annuity business in force. Our accounting policies for DAC, VOBA, DSI and DFEL affect the Annuities, Retirement Plan Services, Life Insurance and Group Protection segments.

Deferrals

Qualifying deferrable acquisition expenses are recorded as an asset on our Consolidated Balance Sheets as DAC for products we sold during a period or VOBA for books of business we acquired during a period. In addition, we defer costs associated with DSI and revenues associated with DFEL. DSI increases interest credited and reduces income when amortized. DFEL is a liability included within other contract holder funds on our Consolidated Balance Sheets, and when amortized, increases fee income on our Consolidated Statements of Comprehensive Income (Loss).

We incur certain costs that can be capitalized in the acquisition of insurance contracts. Only those costs incurred that result directly from and are essential to the successful acquisition of new or renewal insurance contracts may be capitalized as deferrable acquisition costs. This determination of deferability must be made on a contract-level basis. Some examples of acquisition costs that are subject to deferral include the following:

- Employee, agent or broker commissions;
- Wholesaler production bonuses;
- Renewal commissions and bonuses to agents or brokers;
- Medical and inspection fees;
- Premium-related taxes and assessments; and
- A portion of the salaries and benefits of certain employees involved in the underwriting, contract issuance and processing, medical and inspection and sales force contract selling functions.

All other acquisition-related costs, including costs incurred by the insurer for soliciting potential customers, market research, training, administration, management of distribution and underwriting functions, unsuccessful acquisition or renewal efforts and product development, are considered non-deferrable acquisition costs and must be expensed in the period incurred.

In addition, the following indirect costs are considered non-deferrable acquisition costs and must be charged to expense in the period incurred:

- Administrative costs;
- Rent;
- Depreciation;
- Occupancy costs;
- Equipment costs (including data processing equipment dedicated to acquiring insurance contracts);
- Trail commissions; and
- Other general overhead.

Our DAC, VOBA, DSI and DFEL balances (in millions) by business segment as of December 31, 2014, were as follows:

	Annuities	Retirement Plan Services	Life Insurance	Group Protection	Total
DAC and VOBA					
Gross	\$ 3,403	\$ 251	\$ 6,468	\$ 248	\$ 10,369
Unrealized (gain) loss	(340)	(103)	(1,719)	-	(2,162)
Carrying value	\$ 3,063	\$ 148	\$ 4,749	\$ 248	\$ 8,207
DSI					
Gross	\$ 259	\$ 4	\$ 9	\$ -	\$ 272
Unrealized (gain) loss	(32)	-	-	-	(32)
Carrying value	\$ 227	\$ 4	\$ 9	\$ -	\$ 240
DFEL					
Gross	\$ 267	\$ -	\$ 1,957	\$ -	\$ 2,224
Unrealized (gain) loss	(1)	-	(822)	-	(823)
Carrying value	\$ 266	\$ -	\$ 1,135	\$ -	\$ 1,401

Available-for-sale (“AFS”) securities and certain derivatives are stated at fair value with unrealized gains and losses included within accumulated other comprehensive income (loss) (“AOCI”), net of associated DAC, VOBA, DSI, future contract benefits, other contract holder funds and deferred income taxes. The unrealized balances in the table above represent the DAC, VOBA, DSI and DFEL balances for these effects of unrealized gains and losses on AFS securities and certain derivatives.

Amortization

Deferrable acquisition costs for variable annuity and deferred fixed annuity contracts and UL and VUL policies are amortized over the lives of the contracts in relation to the incidence of EGPs derived from the contracts. Certain broker commissions or broker-dealer expenses that vary with and are related to sales of mutual fund products, respectively, are expensed as incurred rather than deferred and amortized. For our traditional products, we amortize deferrable acquisition costs either on a straight-line basis or as a level percent of premium of the related contracts, depending on the block of business.

EGPs vary based on a number of sources including policy persistency, mortality, fee income, investment margins, expense margins and realized gains and losses on investments, including assumptions about the expected level of credit-related losses. Each of these sources of profit is, in turn, driven by other factors. For example, assets under management and the spread between earned and credited rates drive investment margins; net amount at risk drives the level of cost of insurance charges and reinsurance premiums. The level of separate account assets under management is driven by changes in the financial markets (equity and bond markets, hereafter referred to collectively as “equity markets”) and net flows. Realized gains and losses on investments include amounts resulting from differences in the actual level of impairments and the levels assumed in calculating EGPs.

We generally amortize DAC, VOBA, DSI and DFEL in proportion to our EGPs for interest-sensitive products. When actual gross profits are higher in the period than EGPs, we recognize more amortization than planned. When actual gross profits are lower in the period than EGPs, we recognize less amortization than planned. In a calendar year where the gross profits for a certain group of policies, or “cohorts,” are negative, our actuarial process limits, or floors, the amortization expense offset to zero.

For a discussion of the periods over which we amortize our DAC, VOBA, DSI and DFEL see “DAC, VOBA, DSI and DFEL” in Note 1.

Unlocking

As discussed and defined in “DAC, VOBA, DSI and DFEL” in Note 1, we conduct our annual comprehensive review of the assumptions and projection models underlying the amortization of DAC, VOBA, DSI, DFEL, embedded derivatives and reserves for life insurance and annuity products with living benefit and death benefit guarantees in the third quarter of each year. We may have unlocking in other quarters as we become aware of information that warrants updating assumptions outside of our annual comprehensive review.

For illustrative purposes, the following presents the hypothetical effects to net income (loss) attributable to changes in assumptions from those our model projections assume, assuming all other factors remain constant:

Change in Assumption	Hypothetical Effect to Net Income (Loss)	Description of Expected Effect
Higher equity markets	Favorable	Increase to fee income and decrease to changes in reserves.
Lower equity markets	Unfavorable	Decrease to fee income and increase to changes in reserves.
Higher investment margins	Favorable	Increase to interest rate spread on our fixed product line, including fixed portion of variable.
Lower investment margins	Unfavorable	Decrease to interest rate spread on our fixed product line, including fixed portion of variable.
Higher lapses	Unfavorable	Decrease to fee income, partially offset by decrease to benefits due to shorter contract life.
Lower lapses	Favorable	Increase to fee income, partially offset by increase to benefits due to longer contract life.
Higher death claims	Unfavorable	Decrease to fee income and increase to changes in reserves due to shorter contract life.
Lower death claims	Favorable	Increase to fee income and decrease to changes in reserves due to longer contract life.

Details underlying the effect to income (loss) from continuing operations from unlocking (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Income (loss) from operations:					
Annuities	\$ 15	\$ (1)	\$ (5)	NM	80%
Retirement Plan Services	1	(4)	(3)	125%	-33%
Life Insurance	(16)	17	47	NM	-64%
Excluded realized gain (loss)	38	29	7663	31%	-54%
Income (loss) from continuing operations	\$ 38	\$ 41	\$ 102	-7%	-60%

Unlocking was driven primarily by the following:

2014

- For Annuities, we modified our long-term volatility and policyholder behavior assumptions, partially offset by modifying our separate account fees and interest margin assumptions.
- For Retirement Plan Services, we modified our separate account fees, maintenance expenses and policyholder behavior assumptions, substantially offset by lowering our interest margin assumption.
- For Life Insurance, we modified our mortality/morbidity and premium persistency assumptions and other items, partially offset by modifying our assumptions related to interest margin, policyholder behavior and maintenance expenses.
- For excluded realized gain (loss), we modified our long-term volatility and policyholder behavior assumptions for GLB riders.

41

2013

- For Annuities, we modified our policyholder behavior and variable annuity mortality assumptions, partially offset by modifying our interest margin assumptions and other items.
- For Retirement Plan Services, we modified our interest margin assumptions.
- For Life Insurance, we modified our amortization period and mortality assumptions, partially offset by lowering our early duration portfolio yield assumptions.
- For excluded realized gain (loss), we modified our policyholder behavior assumptions for GLB riders.

2012

During the third quarter of 2012, we lowered our new money investment yield assumption to reflect the then current new money rates and to approximate the forward curve for interest rates relevant at such time. This reduction in the interest rate assumption resulted in resetting the current new money investment rate followed by a gradual annual recovery over seven years to a rate 50 basis points below our previous ultimate long-term assumption. As a result of this assumption revision, we recorded unfavorable unlocking of \$110 million, after-tax, for Life Insurance, \$4 million, after-tax, for Annuities, and \$6 million, after-tax, for Retirement Plan Services.

- For Annuities and Retirement Plan Services, we modified our policyholder behavior assumptions and lowered our new money investment yield assumption as discussed above.
- For Life Insurance, we modified our life mortality assumption, partially offset by lowering our new money investment yield assumption as discussed above.
- For excluded realized gain (loss), we modified our policyholder behavior assumptions for GLB riders.

Reversion to the Mean

Because returns within the variable sub-accounts (“variable funds”) have a significant effect on the value of variable annuity and VUL products and the fees earned on these accounts, EGPs could increase or decrease with movements in variable fund returns; therefore, significant and sustained changes in variable funds have had and could in the future have an effect on DAC, VOBA, DSI and DFEL amortization for our variable annuity, annuity-based 401(k) and VUL businesses.

As variable fund returns do not move in a systematic manner, we reset the baseline of account values from which EGPs are projected, which we refer to as our reversion to the mean (“RTM”) process. Under our RTM process, on each valuation date, future EGPs are projected using stochastic modeling of a large number of market scenarios in conjunction with best estimates of lapse rates, interest rate spreads and mortality to develop a statistical distribution of the present value of future EGPs for our variable annuity, annuity-based 401(k) and VUL blocks of business. Because variable fund returns are unpredictable, the underlying premise of this process is that best estimate projections of future EGPs need not be affected by random short-term and insignificant deviations from expectations in variable fund returns. However, long-term or significant deviations from expected variable fund returns require a change to

best estimate projections of EGPs and unlocking of DAC, VOBA, DSI, DFEL and changes in future contract benefits. The statistical distribution is designed to identify when the deviations from expected returns have become significant enough to warrant a change of the future variable fund growth rate assumption.

The stochastic modeling performed for our variable annuity blocks of business as described above is used to develop a range of reasonably possible future EGPs. We compare the range of the present value of the future EGPs from the stochastic modeling to that used in our amortization model. A set of intervals around the mean of these scenarios is utilized to calculate two separate statistical ranges of reasonably possible EGPs. These intervals are then compared to the present value of the EGPs used in the amortization model. If the present value of EGPs utilized for amortization were to exceed the reasonable range of statistically calculated EGPs, a revision of the EGPs used to calculate amortization would be considered. If a revision is deemed necessary, future EGPs would be re-projected using the current account values at the end of the period during which the revision occurred along with a long-term variable fund growth rate assumption such that the re-projected EGPs would be our best estimate of EGPs.

Our practice is not necessarily to unlock immediately after exceeding the first of the two statistical ranges, but, rather, if we stay between the first and second statistical range for several quarters, we would likely unlock. Additionally, if we exceed the ranges as a result of a short-term market reaction, we would not necessarily unlock. However, if the second statistical range is exceeded for more than one quarter, it is likely that we would unlock. While this approach reduces adjustments to DAC, VOBA, DSI and DFEL due to short-term fluctuations, significant changes in variable fund returns that extend beyond one or two quarters could result in a significant favorable or unfavorable unlocking.

Notwithstanding these intervals, if a severe decline or increase in variable fund values were to occur or should other circumstances suggest that the present value of future EGPs no longer represents our best estimate, we could determine that a revision of the EGPs is necessary.

Our long-term variable fund growth rate assumption, which is used in the determination of DAC, VOBA, DSI and DFEL amortization for the variable component of our variable annuity and VUL products, is an immediate drop of approximately 12% followed by growth

going forward of 7% to 9% depending on the block of business and reflecting differences in contract holder fund allocations between fixed-income and equity-type investments. If we had unlocked our RTM assumption as of December 31, 2014, we would have recorded a favorable unlocking of approximately \$300 million, pre-tax, for Annuities, approximately \$25 million, pre-tax, for Retirement Plan Services, and approximately \$40 million, pre-tax, for Life Insurance.

Investments

Invested assets are an integral part of our operations, and we invest in fixed maturity and equity securities that are primarily classified as available-for-sale and carried at fair value with the difference from amortized cost included in stockholders' equity as a component of AOCI. See "Consolidated Investments" below for more information.

Investment Valuation

Our measurement of fair value is based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset or NPR, which would include our own credit risk. Our estimate of an exchange price is the price in an orderly transaction between market participants to sell the asset or transfer the liability ("exit price") in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability, as opposed to the price that would be paid to acquire the asset or receive a liability ("entry price"). We categorize our financial instruments carried at fair value into a three-level fair value hierarchy, based on the priority of inputs to the respective valuation technique. The three-level hierarchy for fair value measurement is defined in Note 1.

The following summarizes our AFS and trading securities and derivative investments carried at fair value by pricing source and fair value hierarchy level (in millions) as of December 31, 2014:

Quoted Prices in Active Markets for Identical Assets	Significant Observable Inputs	Significant Unobservable Inputs	Total Fair Value
(Level 1)	(Level 2)	(Level 3)	

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Priced by third-party pricing services	\$ 664	\$ 73,441	\$ -	\$ 74,105
Priced by independent broker quotations	-	-	2,301	2,301
Priced by matrices	-	13,207	-	13,207
Priced by other methods (1)	-	-	1,454	1,454
Total	\$ 664	\$ 86,648	\$ 3,755	\$ 91,067
Percent of total	1%	95%	4%	100%

(1) Represents primarily securities for which pricing models were used to compute fair value.

For the categories and associated fair value of our AFS fixed maturity securities classified within Level 3 of the fair value hierarchy as of December 31, 2014 and 2013, see Notes 1 and 21.

Our investments are valued using the appropriate market inputs based on the investment type, and include benchmark yields, reported trades, broker-dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers and reference data. In addition, market indicators and industry and economic events are monitored, and further market data is acquired if certain triggers are met. We incorporate the issuer's credit rating and a risk premium, if warranted, given the issuer's industry and the security's time to maturity. We use an internationally recognized pricing service as our primary pricing source, and we do not adjust prices received from third parties or obtain multiple prices when measuring the fair value of our investments. We generally use prices from the pricing service rather than broker quotes because we have documentation from the pricing service on the observable market inputs they use, as compared to the limited information on the pricing inputs from broker quotes. For private placement securities, we use pricing matrices that utilize observable pricing inputs of similar public securities and Treasury yields as inputs to the fair value measurement. It is possible that different valuation techniques and models, other than those described above, could produce materially different estimates of fair value.

When the volume and level of activity for an asset or liability has significantly decreased in relation to normal market activity for the asset or liability, we believe that the market is not active. Activities that may indicate a market is not active include fewer recent transactions in the market, price quotations that lack current information and/or vary substantially over time or among market makers, limited public information, uncorrelated indexes with recent fair values of assets and abnormally wide bid-ask spread. As of December 31, 2014, we evaluated the markets that our securities trade in and concluded that none were inactive. We will continue to re-evaluate this conclusion, as needed, based on market conditions.

We use unobservable inputs to measure the fair value of securities trading in less liquid or illiquid markets with limited or no pricing information. We obtain broker quotes for securities such as synthetic convertibles, index-linked certificates of deposit and collateralized debt obligations (“CDOs”) when sufficient security structure or other market information is not available to produce an evaluation. For broker-quoted only securities, non-binding quotes from market makers or broker-dealers are obtained from sources recognized as market participants. Broker-quoted securities are based solely on receipt of updated quotes from a single market maker or a broker-dealer recognized as a market participant. Our broker-quoted only securities are generally classified as Level 3 of the fair value hierarchy. As of December 31, 2014, we used broker quotes for 74 securities as our final price source, representing approximately 1% of total securities owned.

In order to validate the pricing information and broker quotes, we employ, where possible, procedures that include comparisons with similar observable positions, comparisons with subsequent sales and observations of general market movements for those security classes. Our primary third-party pricing service has policies and processes to ensure that it is using objectively verifiable observable market data. The pricing service regularly reviews the evaluation inputs for securities covered, including broker quotes, executed trades and credit information, as applicable. If the pricing service determines it does not have sufficient objectively verifiable information about a security’s valuation, it discontinues providing a valuation for the security. The pricing service regularly publishes and updates a summary of inputs used in its valuations by major security type. In addition, we have policies and procedures in place to review the process that is utilized by the third-party pricing service and the output that is provided to us by the pricing service. On a periodic basis, we test the pricing for a sample of securities to evaluate the inputs and assumptions used by the pricing service, and we perform a comparison of the pricing service output to an alternative pricing source. In addition, we check prices provided by our primary pricing service to ensure that they are not stale or unreasonable by reviewing the prices for unusual changes from period to period based on certain parameters or for lack of change from one period to the next. If such anomalies in the pricing are observed, we may use pricing information from another pricing source.

Valuation of Alternative Investments

Recognition of investment income on alternative investments is delayed due to the availability of the related financial statements, which are generally obtained from the partnerships’ general partners, as our venture capital, real estate and oil and gas portfolios are generally reported to us on a three-month delay, and our hedge funds are reported to us on a one-month delay. In addition, the effect of annual audit adjustments related to completion of calendar-year financial statement audits of the investees are typically received during the first or second quarter of each calendar year. Accordingly, our investment income from alternative investments for any calendar year period may not include the complete effect of the change in the underlying net assets for the partnership for that calendar year period. Recorded audit adjustments affect our investment income on alternative investments in the period that the adjustments are recorded.

Write-downs for OTTI and Allowance for Losses

We regularly review our AFS securities for declines in fair value that we determine to be other-than-temporary. For additional details, see “Consolidated Investments” below and Notes 1 and 5.

For certain securitized fixed maturity securities with contractual cash flows, including asset-backed securities (“ABS”), we use our best estimate of cash flows for the life of the security to determine whether there is an other-than-temporary impairment (“OTTI”) of the security. In addition, we review for other indicators of impairment as required by the Investments – Debt and Equity Securities Topic of the Financial Accounting Standards Board (“FASB”) Accounting Standards Codification™ (“ASC”).

As the discussion in Notes 1 and 5 indicates, there are risks and uncertainties associated with determining whether declines in the fair value of investments are other-than-temporary. These include subsequent significant changes in general overall economic conditions, as well as specific business conditions affecting particular issuers, future financial market effects such as interest rate spreads, stability of foreign governments and economies, future rating agency actions and significant accounting, fraud or corporate governance issues that may adversely affect certain investments. In addition, there are often significant estimates and assumptions that we use to estimate the fair values of securities as described in “Investment Valuation.” We continually monitor developments and update underlying assumptions and financial models based upon new information.

Write-downs and allowances for losses on select mortgage loans, real estate and other investments are established when the underlying value of the property is deemed to be less than the carrying value. All mortgage loans that are impaired have an established allowance for credit loss. Changing economic conditions affect our valuation of mortgage loans. Increasing vacancies, declining rents and the like are incorporated into the discounted cash flow analysis that we perform for monitored loans and may contribute to the establishment of (or an increase in) an allowance for credit losses. In addition, we continue to monitor the entire commercial mortgage loan portfolio to identify risk. Areas of emphasis include properties that have deteriorating credits or have experienced debt-service coverage and/or loan-to-value reduction. Where warranted, we have established or increased loss reserves based upon this analysis.

Derivatives

We maintain an overall risk management strategy that incorporates the use of derivative instruments to minimize significant unplanned fluctuations in earnings that are caused by interest rate risk, foreign currency exchange risk, equity market risk, default risk, basis risk and credit risk. Assessing the effectiveness of these hedging programs and evaluating the carrying values of the related derivatives often involve a variety of assumptions and estimates. Our accounting policies for derivatives and the potential effect on interest spreads in a falling rate environment are discussed in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk,” Notes 1 and 6.

We carry our derivative instruments at fair value, which we determine through valuation techniques or models that use market data inputs or independent broker quotations. The fair values fluctuate from period to period due to the volatility of the valuation inputs, including but not limited to swap interest rates, interest and equity volatility and equity index levels, foreign currency forward and spot rates, credit spreads and correlations, some of which are significantly affected by economic conditions. The effect to revenue is reported in realized gain (loss) and such amount along with the associated federal income taxes is excluded from income (loss) from operations of our segments.

Certain of our variable annuity contracts reported within future contract benefits contain embedded derivatives that are carried at fair value on a recurring basis and are all classified as Level 3 of the fair value hierarchy, including our GLB reserves embedded derivatives, a portion of which may be reported in either other assets or other liabilities. These embedded derivatives are valued based on a stochastic projection of scenarios of the embedded derivative cash flows. The scenario assumptions, at each valuation date, are those we view to be appropriate for a hypothetical market participant and include assumptions for capital markets, actuarial lapse, benefit utilization, mortality, risk margin, administrative expenses and a margin for profit. In addition, an NPR component is determined at each valuation date that reflects our risk of not fulfilling the obligations of the underlying liability. The spread for the NPR is added to the discount rates used in determining the fair value from the net cash flows. We believe these assumptions are consistent with those that would be used by a market participant; however, as the related markets develop, we will continue to reassess our assumptions. It is possible that different valuation techniques and assumptions could produce a materially different estimate of fair value.

Changes in the fair value of these embedded derivatives result primarily from changes in market conditions. For more information, see Notes 1 and 21.

GLB

We have a dynamic hedging strategy designed to mitigate selected risk and income statement volatility caused by changes in the equity markets, interest rates and market-implied volatilities associated with the Lincoln SmartSecurity® Advantage guaranteed withdrawal benefit (“GWB”) feature and our i4LIFE® Advantage and 4LATER® Advantage guaranteed income benefit (“GIB”) features that are available in our variable annuity

products. We have certain GLB variable annuity products with GWB and GIB features that are embedded derivatives. Certain features of these guarantees, notably our GIB, 4LATER® and Lincoln Lifetime IncomeSMAAdvantage features, have elements of both insurance benefits accounted for under the Financial Services – Insurance – Claim Costs and Liabilities for Future Policy Benefits Subtopic of the FASB ASC (“benefit reserves”) and embedded derivative reserves. We calculate the value of the embedded derivative reserve and the benefit reserve based on the specific characteristics of each GLB feature. In addition to mitigating selected risk and income statement volatility, the hedge program is also focused on a long-term goal of accumulating assets that could be used to pay claims under these benefits.

The hedging strategy is designed such that changes in the value of the hedge contracts move in the opposite direction of changes in GLB embedded derivative reserves. This dynamic hedging strategy utilizes options and total return swaps on U.S.-based equity indices, and futures on U.S.-based and international equity indices, as well as interest rate futures, interest rate swaps and currency futures. The notional amounts of the underlying hedge instruments are such that the magnitude of the change in the value of the hedge instruments due to changes in equity markets, interest rates and implied volatilities is designed to offset the magnitude of the change in the fair value of the GLB guarantees caused by those same factors. See “Realized Gain (Loss) and Benefit Ratio Unlocking – Variable Annuity Net Derivatives Results” below for information on how we determine our NPR.

As part of our current hedging program, equity market, interest rate and market-implied volatility conditions are monitored on a daily basis. We rebalance our hedge positions based upon changes in these factors as needed. While we actively manage our hedge positions, these positions may not completely offset changes in the fair value embedded derivative reserve caused by movements in these factors due to, among other things, differences in timing between when a market exposure changes and corresponding changes to the hedge positions, extreme swings in the equity markets, interest rates and market-implied volatilities, realized market volatility, contract holder behavior, divergence between the performance of the underlying funds and the hedging indices, divergence between the actual and expected performance of the hedge instruments or our ability to purchase hedging instruments at prices consistent with our desired risk and return trade-off.

Within our individual annuity business, approximately 70% of our variable annuity account values contained GLB features as of December 31, 2014. Declines in the equity markets increase our exposure to potential benefits with the GLB features, leading to an increase in our existing liability or a decline if in an asset position for those benefits. For example, a contract with a GLB feature is “in the money” if the contract holder’s account balance falls below the present value of guaranteed withdrawal or income benefits, assuming no lapses. As of December 31, 2014 and 2013, 3% and 4%, respectively, of all in-force contracts with a GLB feature were “in the money,” and our exposure, after reinsurance, as of December 31, 2014 and 2013, was \$279 million and \$308 million, respectively.

However, the only way the contract holder can realize the excess of the present value of benefits over the account value of the contract is through a series of withdrawals or income payments that do not exceed a maximum amount. If, after the series of withdrawals or income payments, the account value is exhausted, the contract holder will continue to receive a series of annuity payments. The account value can also fluctuate with equity market returns on a daily basis resulting in increases or decreases in the excess of the present value of benefits over account value.

As a result of these factors, the ultimate amount to be paid by us related to GLB guarantees is uncertain and could be significantly more or less than \$279 million, net of reinsurance. Our fair value estimates of the GLB embedded derivatives, which are based on detailed models of future cash flows under a wide range of market-consistent scenarios, reflect a more comprehensive view of the related factors and represent our best estimate of the present value of these potential liabilities. The market-consistent scenarios used in the determination of the fair value of the GLB embedded derivatives are similar to those used by an investment bank to value derivatives for which the pricing is not transparent and the aftermarket is nonexistent or illiquid. We use risk-neutral Monte Carlo simulations in our calculation to value the entire block of guarantees, which involve 100 unique scenarios per policy or approximately 46 million scenarios. The market-consistent scenario assumptions, at each valuation date, are those we view to be appropriate for a hypothetical market participant. The market-consistent inputs include assumptions for the capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.), policyholder behavior (e.g., policy lapse, benefit utilization, mortality, etc.), risk margins, administrative expenses and a margin for profit. We believe these assumptions are consistent with those that would be used by a market participant; however, as the related markets develop, we will continue to reassess our assumptions. It is possible that different valuation techniques and assumptions could produce a materially different estimate of fair value.

For information on our variable annuity hedge program performance, see our discussion in “Realized Gain (Loss) and Benefit Ratio Unlocking – Variable Annuity Net Derivatives Results” below.

The following table presents our estimates of the potential instantaneous effect to net income, which could result from sudden changes that may occur in equity markets, interest rates and implied market volatilities (in millions) at the levels indicated in the table and excludes the net cost of operating the hedging program. The amounts represent the estimated difference between the change in the portion of GLB reserves that is calculated on a fair value basis and the change in the value of the underlying hedge instruments after the amortization of DAC, VOBA, DSI and DFEL and taxes. These effects do not include any estimate of unlocking that could occur, nor do they estimate any change in the NPR component of the GLB reserve or any estimate of effects to our GLB benefit ratio unlocking. These estimates are based upon the recorded reserves as of December 31, 2014, and the related hedge instruments in place as of that date. The effects presented in the table below are not representative of the aggregate impacts that could result if a combination of such changes to equity market returns, interest rates and implied volatilities occurred.

	In-Force Sensitivities			
Equity Market Return	-20%	-10%	-5%	5%
Hypothetical effect to net income	\$ (144)	\$ (39)	\$ (12)	\$ (5)

	-50	-25	+25	+50
Interest Rates	bps	bps	bps	bps
Hypothetical effect to net income	\$ (20)	\$ (6)	\$ (1)	\$ (9)
Implied Volatilities	-4%	-2%	2%	4%
Hypothetical effect to net income	\$ (7)	\$ (4)	\$ 5	\$ 10

The following table shows the effect (dollars in millions) of indicated changes in instantaneous shifts in equity market returns, interest rate scenarios and market-implied volatilities:

	Assumptions of Changes In			Hypothetical
	Equity	Interest	Market	Effect to
	Market	Rate	Implied	Net
	Return	Yields	Volatilities	Income
Scenario 1	-5%	-12.5 bps	+1%	\$ (17)
Scenario 2	-10%	-25.0 bps	+2%	(60)
Scenario 3	-20%	-50.0 bps	+4%	(232)

The actual effects of the results illustrated in the two tables above could vary significantly depending on a variety of factors, many of which are out of our control, and consideration should be given to the following:

- The analysis is only valid as of December 31, 2014, due to changing market conditions, contract holder activity, hedge positions and other factors;
- The analysis assumes instantaneous shifts in the capital market factors and no ability to rebalance hedge positions prior to the market changes;
- The analysis assumes constant exchange rates and implied dividend yields;

- Assumptions regarding shifts in the market factors, such as assuming parallel shifts in interest rate and implied volatility term structures, may be overly simplistic and not indicative of actual market behavior in stress scenarios;
- It is very unlikely that one capital market sector (e.g., equity markets) will sustain such a large instantaneous movement without affecting other capital market sectors; and
- The analysis assumes that there is no tracking or basis risk between the funds and/or indices affecting the GLB reserves and the instruments utilized to hedge these exposures.

Standard & Poor's 500 Index® Benefits

Our indexed annuity and IUL contracts permit the holder to elect a fixed interest rate return or a return where interest credited to the contracts is linked to the performance of the Standard & Poor's ("S&P") 500 Index® ("S&P 500"). Contract holders may elect to rebalance among the various accounts within the product at renewal dates, either annually or biannually. At the end of each 1-year or 2-year indexed term we have the opportunity to re-price the indexed component by establishing different participation rates, caps, spreads or specified rates, subject to contractual guarantees. We purchase S&P 500 options that are highly correlated to the portfolio allocation decisions of our contract holders, such that we are economically hedged with respect to equity returns for the current reset period. The mark-to-market of the options held generally offsets the change in value of the embedded derivative within the indexed annuity, both of which are recorded as a component of realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). The Derivatives and Hedging and the Fair Value Measurements and Disclosures Topics of the FASB ASC require that we calculate fair values of index options we may purchase in the future to hedge contract holder index allocations in future reset periods. These fair values represent an estimate of the cost of the options we will purchase in the future, discounted back to the date of the balance sheet, using current market indicators of volatility and interest rates. Changes in the fair values of these liabilities are included as a component of realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). For information on our S&P 500 benefits hedging results, see our discussion in "Realized Gain (Loss) and Benefit Ratio Unlocking" below.

Future Contract Benefits and Other Contract Holder Obligations

Reserves

Reserves are the amounts that, with the additional premiums to be received and interest thereon compounded annually at certain assumed rates, are calculated to be sufficient to meet the various policy and contract obligations as they mature. Establishing adequate reserves for our obligations to contract holders requires assumptions to be made regarding mortality and morbidity. The applicable insurance laws under which insurance companies operate require that they report, as liabilities, policy reserves to meet future obligations on their outstanding contracts. These laws specify that the reserves shall not be less than reserves calculated using certain specified mortality and morbidity tables, interest rates and methods of valuation.

The reserves reported in our consolidated financial statements contained herein are calculated in accordance with GAAP and differ from those specified by the laws of the various states and carried in the statutory financial statements

of the life insurance subsidiaries. These differences arise from the use of mortality and morbidity tables, interest, persistency and other assumptions that we believe to be more representative of the expected experience for these contracts than those required for statutory accounting purposes and from differences in actuarial reserving methods.

The assumptions on which reserves are based are intended to represent an estimation of experience for the period that policy benefits are payable. If actual experience is better than or equal to the assumptions, then reserves should be adequate to provide for future benefits and expenses. If experience is worse than the assumptions, additional reserves may be required. This would result in a charge to our net income during the period the increase in reserves occurred. The key experience assumptions include mortality rates, policy persistency and interest rates. We periodically review our experience and update our policy reserves for new issues and reserve for all claims incurred, as we believe appropriate.

GDB

The reserves related to the GDB features available in our variable annuity products are based on the application of a “benefit ratio” (the present value of total expected benefit payments over the life of the contract divided by the present value of total expected assessments over the life of the contract) to total variable annuity assessments received in the period. The level and direction of the change in reserves will vary over time based on the emergence of the benefit ratio and the level of assessments associated with the variable annuity.

We utilize a delta hedging strategy for variable annuity products with a GDB feature, which uses futures on U.S.-based equity market indices to hedge against movements in equity markets. The hedging strategy is designed to hedge our exposure to earnings volatility that results from equity market driven changes in the reserve for GDB contracts. Because the GDB reserves are based upon projected long-term equity market return assumptions, and because the value of the hedging contracts will reflect current capital market conditions, the quarterly changes in values for the GDB reserves and the hedging contracts may not exactly offset each other.

For information on our variable annuity hedge program performance, see our discussion in “Realized Gain (Loss) and Benefit Ratio Unlocking – Variable Annuity Net Derivatives Results” below.

UL Products with Secondary Guarantees

We issue UL contracts where we provide a secondary guarantee to the contract holder. The policy can remain in force, even if the base policy account value is zero, as long as contractual secondary guarantee requirements have been met. The reserves related to UL products with secondary guarantees are based on the application of a benefit ratio the same as our GDB features, which are discussed above. The level and direction of the change in reserves will vary over time based on the emergence of the benefit ratio and the level of assessments associated with the contracts. For more discussion, see “Results of Life Insurance” below.

Goodwill and Other Intangible Assets

Goodwill and intangible assets with indefinite lives are not amortized, but are reviewed at least annually by us as of October 1 for indications of value impairment, with consideration given to financial performance and other relevant factors. Intangibles that do not have indefinite lives are amortized over their estimated useful lives. We perform a two-step test in our evaluation of the carrying value of goodwill for each of our reporting units, if qualitative factors determine it is necessary to complete the two-step goodwill impairment test. The results of one test on one reporting unit cannot subsidize the results of another reporting unit. In Step 1 of the evaluation, the fair value of each reporting unit is determined and compared to the carrying value of the reporting unit. If the fair value is greater than the carrying value, then the carrying value of the reporting unit is deemed to be recoverable, and Step 2 is not required. If the fair value estimate is less than the carrying value, it is an indicator that impairment may exist, and Step 2 is required. In Step 2, the implied fair value of goodwill is determined for the reporting unit. The reporting unit’s fair value as determined in Step 1 is assigned to all of its net assets (recognized and unrecognized) as if the reporting unit were acquired in a business combination as of the date of the impairment test. If the implied fair value of the reporting unit’s goodwill is lower than its carrying amount, goodwill is impaired and written down to its fair value.

The fair values of our insurance and annuities businesses are comprised of two components: the value of new business and the value of in-force business. Factors could cause us to believe our estimated fair value of the total business may be lower than the carrying value and trigger a Step 1 test, but may not require a Step 2 test if the fair value of the reporting unit is greater than its carrying value. We may also conduct a Step 2 test, but it may not result in goodwill impairment because the implied fair value of goodwill may exceed our carrying amount of goodwill. The value of our goodwill asset is supported by our value of new business, which is not affected by the same factors as our value of in-force business.

The implied fair value of goodwill is most sensitive to new business production levels, profitability and discount rates. Factors that could affect production levels and profitability include mix of new business, pricing changes, customer acceptance of our products and distribution strength. Recent declines in interest rates have applied downward pressure to the interest rate inputs used in the discount rate calculation. Spread compression and related effects to profitability caused by lower interest rates affect the valuation of in-force business much more significantly than the valuation of new business. The effect of interest rate movements on the value of new business is primarily related to the discount rate.

Refer to Note 10 of our consolidated financial statements for goodwill and specifically identifiable intangible assets by segment as well as the results of our recoverability analysis for the years ended 2013 and 2012. All the discussion that follows represents our analysis as of October 1, 2014.

Step 1 Results

We performed a Step 1 analysis on all of our reporting units including: Annuities, Retirement Plan Services, Life Insurance and Group Protection. Our Annuities and Retirement Plan Services reporting units passed the Step 1 analysis. Given the Step 1 results, we also performed a Step 2 analysis for Life Insurance and Group Protection.

For Annuities and Retirement Plan Services, we estimated the fair values of the reporting units based on a discounted cash flow valuation technique (“income approach”) similar to that of Life Insurance and Group Protection discussed below. We also updated our estimates of discount rates based upon current market observable inputs. We used discount rates ranging from 9% to 12% for Annuities and 8.75% to 9.75% for Retirement Plan Services based upon the weighted average cost of capital adjusted for risks associated with the operations.

Based upon our Step 1 analysis for Annuities and Retirement Plan Services, our estimated implied fair value was well in excess of each reporting unit’s carrying value of net assets, including goodwill.

Step 2 Results and Information for our Life Insurance and Group Protection Reporting Units

In our Step 2 analyses of Life Insurance and Group Protection, we estimated the implied fair value of goodwill for each reporting unit primarily through an income approach, although limited available market data was also considered. In determining the estimated implied fair value of goodwill for these reporting units, we considered discounted cash flow calculations and assumptions that market participants would make in valuing the new business of these reporting units. These analyses required us to make judgments about new business revenues, earnings projections, capital market assumptions and discount rates.

The key assumptions used in the analyses to determine the implied fair value of goodwill for Life Insurance and Group Protection included:

- New business for 10 years;
- Expense synergies assumption that would be expected to be realized in a market-participant transaction similar to prior market observable transactions and our prior experience; and
- Interest rates used to discount new business cash flows; we considered discount rates ranging from 8% to 10% for Life Insurance and 8.75% to 9.25% for Group Protection based on the weighted average cost of capital adjusted for the risk factors associated with the operations.

Based upon our Step 2 analysis for Life Insurance and Group Protection, we determined that there was no impairment.

Outlook

Factors that can influence the value of goodwill include the capital markets, competitive landscape, regulatory environment, consumer confidence and any items that can directly or indirectly affect new business future cash flows. For example, unfavorable changes to assumptions as compared to our October 1, 2014, analysis or factors that could result in impairment include, but are not limited to, the following:

- Lower expectations for future sales levels or future sales profitability;
- Higher discount rates on new business assumptions;
- Weakened expectations for the ability to execute future reserve financing transactions for life insurance business over the long-term or expectations for significant increases in the associated costs;
- Legislative, regulatory or tax changes that affect the cost of, or demand for, our subsidiaries' products, the required amount of reserves and/or surplus, or otherwise affect our ability to conduct business, including changes to statutory reserve requirements or changes to risk-based capital ("RBC") requirements; and
- Valuations of mergers or acquisitions of companies or blocks of business that would provide relevant market-based inputs for our impairment assessment that could support different conclusions regarding the estimated fair value of our reporting units.

Income Taxes

Management uses certain assumptions and estimates in determining the income taxes payable or refundable for the current year, the deferred income tax liabilities and assets for items recognized differently in its financial statements from amounts shown on its income tax returns and the federal income tax expense. Determining these amounts requires analysis and interpretation of current tax laws and regulations. Management exercises considerable judgment in evaluating the amount and timing of recognition of the resulting income tax liabilities and assets. These judgments and estimates are re-evaluated on a continual basis as regulatory and business factors change. Legislative changes to

the Internal Revenue Code of 1986, as amended, modification or new regulations, administrative rulings, or court decisions could increase our effective tax rate.

The application of GAAP requires us to evaluate the recoverability of our deferred tax assets and establish a valuation allowance, if necessary, to reduce our deferred tax asset to an amount that is more likely than not to be realizable. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary, and if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, we consider many factors, including: the nature and character of the deferred tax assets and liabilities; taxable income in prior carryback years; future reversals of existing temporary differences; the length of time carryovers can be utilized; and any tax planning strategies we would employ to avoid a tax benefit from expiring unused. Although realization is not assured, management believes it is more likely than not that the deferred tax assets, including our capital loss deferred tax asset, will be realized. For additional information on our income taxes, see Note 7.

Acquisitions and Dispositions

For information about acquisitions and divestitures, see Note 3.

RESULTS OF CONSOLIDATED OPERATIONS

Details underlying the consolidated results, deposits, net flows and account values (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Net Income (Loss)					
Income (loss) from operations:					
Annuities	\$ 925	\$ 750	\$ 595	23%	26%
Retirement Plan Services	160	141	130	13%	8%
Life Insurance	612	544	574	13%	-5%
Group Protection	23	71	72	-68%	-1%
Other Operations	(109)	(122)	(87)	11%	-40%
Excluded realized gain (loss), after-tax	(106)	(178)	(25)	40%	NM
Gain (loss) on early extinguishment of debt, after-tax	-	-	(3)	NM	100%
Income (expense) from reserve changes (net of related amortization) on business sold through reinsurance, after-tax	2	2	3	0%	-33%
Impairment of intangibles, after-tax	-	-	2	NM	-100%
Benefit ratio unlocking, after-tax	7	36	25	-81%	44%
Income (loss) from continuing operations, after-tax	1,514	1,244	1,286	22%	-3%
Income (loss) from discontinued operations, after-tax	1	-	27	NM	-100%
Net income (loss)	\$ 1,515	\$ 1,244	\$ 1,313	22%	-5%

	For the Years Ended December			Change Over	
	31,			Prior Year	
	2014	2013	2012	2014	2013
Deposits					
Annuities	\$ 13,779	\$ 14,772	\$ 11,564	-7%	28%
Retirement Plan Services	7,515	6,786	6,381	11%	6%
Life Insurance	5,332	5,168	4,949	3%	4%
Total deposits	\$ 26,626	\$ 26,726	\$ 22,894	0%	17%
Net Flows					
Annuities	\$ 2,645	\$ 5,012	\$ 2,451	-47%	104%
Retirement Plan Services	(881)	792	987	NM	-20%
Life Insurance	3,777	3,710	3,289	2%	13%

Total net flows \$ 5,541 \$ 9,514 \$ 6,727 -42% 41%

	As of December 31,			Change Over	
	2014	2013	2012	2014	2013
Account Values					
Annuities	\$ 122,041	\$ 115,090	\$ 96,514	6%	19%
Retirement Plan Services	53,539	51,618	43,931	4%	17%
Life Insurance	42,213	40,113	37,325	5%	7%
Total account values	\$ 217,793	\$ 206,821	\$ 177,770	5%	16%

Comparison of 2014 to 2013

Net income increased due primarily to the following:

- Growth in account values and insurance in force.
- Lower losses on variable annuity net derivatives results during 2014.
- The recapture of certain traditional and interest sensitive business under several yearly renewable term reinsurance treaties that were originally ceded to a reinsurer.
- More favorable investment income on alternative investments.

The increase in net income was partially offset primarily by the following:

- An increase in long-term disability incidence along with a decline in long-term disability recoveries in our Group Protection segment and higher death claims attributable to growth in business in force in our Life Insurance segment.
- Realized loss in 2014 related to the sale of Lincoln Financial Media Company (“LFM”).
- Spread compression due to new money rates averaging below our current portfolio yields, partially offset by actions implemented to reduce interest crediting rates.

Comparison of 2013 to 2012

Net income decreased due primarily to the following:

- More favorable tax benefits during 2012 related to the release of reserves associated with prior tax years that were closed in 2012.
- Higher death claims in our Life Insurance segment.
- The effect of more favorable unlocking in 2012.
- Unfavorable variable annuity net derivatives results, excluding unlocking, during 2013.
- Spread compression due to new money rates averaging below our current portfolio yields, partially offset by actions implemented to reduce interest crediting rates.

The decrease in net income was partially offset by growth in account values, insurance in force and group earned premiums.

RESULTS OF ANNUITIES

Income (Loss) from Operations

Details underlying the results for Annuities (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31, 2014	2013	2012	2014	2013
Operating Revenues					
Insurance premiums (1)	\$ 174	\$ 116	\$ 98	50%	18%
Fee income	1,960	1,631	1,331	20%	23%
Net investment income	1,033	1,044	1,082	-1%	-4%
Operating realized gain (loss) (2)	161	135	113	19%	19%
Other revenues (3)	418	395	351	6%	13%
Total operating revenues	3,746	3,321	2,975	13%	12%
Operating Expenses					
Interest credited	610	624	633	-2%	-1%
Benefits	359	274	281	31%	-2%
Commissions and other expenses	1,614	1,496	1,345	8%	11%
Total operating expenses	2,583	2,394	2,259	8%	6%
Income (loss) from operations before taxes	1,163	927	716	25%	29%
Federal income tax expense (benefit)	238	177	121	34%	46%
Income (loss) from operations	\$ 925	\$ 750	\$ 595	23%	26%

(1) Includes primarily our income annuities, which have a corresponding offset in benefits for changes in reserves.

(2) See “Realized Gain (Loss) and Benefit Ratio Unlocking” below.

(3) Consists primarily of revenues attributable to broker-dealer services that are subject to market volatility.

Comparison of 2014 to 2013

Income from operations for this segment increased due primarily to higher fee income driven by higher average daily variable account values.

The increase in income from operations was partially offset primarily by the following:

- Higher commissions and other expenses due to higher account values, resulting in higher trail commissions. This increase was partially offset by the effect of unlocking and higher average equity markets than our model projections assumed, both resulting in a lower amortization rate.
- Higher benefits attributable to an increase in the growth in benefit reserves due to higher guaranteed amounts covered by GLB riders.

Comparison of 2013 to 2012

Income from operations for this segment increased due primarily to higher fee income driven by higher average daily variable account values.

The increase in income from operations was partially offset by the following:

- Higher commissions and other expenses due to higher account values, driving higher trail commissions, and the effect of unlocking. These increases were partially offset by higher average equity markets than our model projections assumed resulting in a lower amortization rate.
- Lower net investment income, net of interest credited, driven by spread compression due to new money rates averaging below our current portfolio yields, and the effect of unlocking. These decreases were partially offset by higher prepayment and bond make-whole premiums.

We provide information about this segment's operating revenue and operating expense line items, the period in which amounts are recognized, key drivers of changes and historical details underlying the line items and their associated drivers below.

See the Variable Account Value Information table within "Fee Income" below for drivers of changes in our variable account values and the Fixed Account Value Information table within "Net Investment Income and Interest Credited" below for drivers of changes in our fixed account values.

See "Consolidated Investments – Commercial Mortgage Loan Prepayment and Bond Make-Whole Premiums" below for more information on prepayment and bond make-whole premiums.

See "Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL – Unlocking" above for more information about unlocking.

Additional Information

New deposits are an important component of net flows and key to our efforts to grow our business. Although deposits do not significantly affect current period income from operations, they are an important indicator of future

profitability. In 2014, we increased our variable annuity deposits on products without GLB riders to 23%, compared to 13% and 10% in 2013 and 2012, respectively. In July 2014, our primary insurance subsidiary, The Lincoln National Life Insurance Company (“LNL”), amended and restated its reinsurance treaty covering portions of new sales of variable annuity GLB product. The treaty provides an additional \$4 billion of reinsurance capacity through December 31, 2015. LNL will retain 100% of the product cash flows, excluding the living benefit guarantee.

The other component of net flows relates to the retention of the business. An important measure of retention is the lapse rate, which compares the amount of withdrawals to the average account values. The overall lapse rate for our annuity products was 7%, 7% and 8% for 2014, 2013 and 2012, respectively.

Our fixed annuity business includes products with discretionary crediting rates that are reset on an annual basis and are not subject to surrender charges. Our ability to retain annual reset annuities will be subject to current competitive conditions at the time interest rates for these products reset. We expect to manage the effects of spreads on near-term income from operations through portfolio management and, to a lesser extent, crediting rate actions, which assumes no significant changes in net flows into or out of our fixed accounts or other changes that may cause interest rate spreads to differ from our expectations. For information on interest rate spreads and the interest rate risk due to falling interest rates, see “Part I – Item 1A. Risk Factors – Market Conditions – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals” and “Effect of Interest Rate Sensitivity” and “Interest Rate Risk on Fixed Insurance Businesses – Falling Rates” in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Fee Income

Details underlying fee income, account values and net flows (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013

products from the fixed portion of variable annuity products	2,796	3,402	2,752	-18%	24%
Variable annuity account values (1)	100,823	93,822	75,501	7%	24%
Average daily variable annuity account values (1)	97,694	84,199	70,901	16%	19%
Average daily S&P 500	1,931	1,644	1,379	17%	19%

(1) Excludes the fixed portion of variable.

We charge contract holders mortality and expense assessments on variable annuity accounts to cover insurance and administrative expenses. These assessments are a function of the rates priced into the product and the average daily variable account values. Average daily account values are driven by net flows and variable fund returns. Charges on GLB riders are assessed based on a contractual rate that is applied either to the account value or the guaranteed amount. In addition, for our fixed annuity contracts and for some variable contracts, we collect surrender charges when contract holders surrender their contracts during their surrender charge periods to protect us from premature withdrawals. Fee income includes charges on both our variable and fixed annuity products, but excludes the attributed fees on our GLB products; see “Realized Gain (Loss) and Benefit Ratio Unlocking – Operating Realized Gain (Loss)” below for discussion of these attributed fees.

Net Investment Income and Interest Credited

Details underlying net investment income, interest credited (in millions) and our interest rate spread were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013

Fixed Account Value Information					
Fixed annuity deposits (1)	\$ 4,004	\$ 4,712	\$ 4,777	-15%	-1%
Increases (decreases) in fixed annuity account values:					
Net flows (1)	1,890	2,626	2,361	-28%	11%
Transfers from the fixed portion of variable annuity products to the variable portion of variable annuity products	(2,796)	(3,402)	(2,752)	18%	-24%
Reinvested interest credited (1)	782	953	770	-18%	24%
Fixed annuity account values (1)	21,218	21,268	21,013	0%	1%
Average fixed account values (1)	21,294	21,231	20,737	0%	2%
Average invested assets on reserves	19,198	19,126	19,139	0%	0%

(1) Includes the fixed portion of variable.

A portion of our investment income earned is credited to the contract holders of our fixed annuity products, including the fixed portion of variable annuity contracts. We expect to earn a spread between what we earn on the underlying general account investments supporting the fixed annuity product line, including the fixed portion of variable annuity contracts, and what we credit to our fixed annuity contract holders' accounts, including the fixed portion of variable annuity contracts. Changes in commercial mortgage loan prepayments and bond make-whole premiums, investment income on alternative investments and surplus investment income can vary significantly from period to period due to a number of factors and, therefore, may contribute to investment income results that are not indicative of the underlying trends.

Benefits

Details underlying benefits (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Benefits					
Net death and other benefits, excluding unlocking	\$ 345	\$ 263	\$ 208	31%	26%
Unlocking	14	11	73	27%	-85%
Total benefits	\$ 359	\$ 274	\$ 281	31%	-2%

Benefits for this segment include changes in income annuity reserves driven by premiums, changes in benefit reserves and our expected costs associated with purchases of derivatives used to hedge our benefit ratio unlocking on benefit reserves associated with our GDB riders.

Commissions and Other Expenses

Details underlying commissions and other expenses (in millions) were as follows:

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

	For the Years Ended			Change Over	
	December 31, 2014	2013	2012	2014	2013
Commissions and Other Expenses					
Commissions:					
Deferrable	\$ 606	\$ 653	\$ 528	-7%	24%
Non-deferrable	451	368	305	23%	21%

DAC Deferrals					
As a percentage of sales/deposits	4.9%	5.1%	5.1%		

(1) Includes reimbursements to Annuities from the Life Insurance segment for reserve financing, net of expenses incurred by Annuities for its use of letters of credit (“LOCs”). The inter-segment amounts are not reported on our Consolidated Statements of Comprehensive Income (Loss).

Commissions and other costs that result directly from and are essential to the successful acquisition of new or renewal business are deferred to the extent recoverable and are amortized over the lives of the contracts in relation to EGPs. Certain types of commissions, such as trail commissions that are based on account values, are expensed as incurred rather than deferred and amortized.

Broker-dealer expenses that vary with and are related to sales are expensed as incurred and not deferred and amortized. Fluctuations in these expenses correspond with fluctuations in other revenues.

RESULTS OF RETIREMENT PLAN SERVICES

Income (Loss) from Operations

Details underlying the results for Retirement Plan Services (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Operating Revenues					
Fee income	\$ 246	\$ 232	\$ 212	6%	9%

Total operating expenses	879	881	856	0%	3%
Income (loss) from operations before taxes	211	190	168	11%	13%
Federal income tax expense (benefit)	51	49	38	4%	29%
Income (loss) from operations	\$ 160	\$ 141	\$ 130	13%	8%

(1) Consists primarily of mutual fund account program revenues for mid to large employers.

Comparison of 2014 to 2013

Income from operations for this segment increased due primarily to the following:

- Higher fee income driven by higher average daily account values.
- Lower commissions and other expenses due to the effect of unlocking.

The increase in income from operations was partially offset by spread compression due to new money rates averaging below our current portfolio yields.

Comparison of 2013 to 2012

Income from operations for this segment increased due primarily to the following:

- Higher fee income driven by higher average daily account values.
- Higher net investment income, net of interest credited, driven by higher average fixed account values and prepayment and bond make-whole premiums. These increases were partially offset by spread compression due to new money rates averaging below our current portfolio yields.

The increase in income from operations was partially offset by higher commissions and other expenses due to higher account values driving higher trail commissions and the effect of unlocking.

We provide information about this segment's operating revenue and operating expense line items, the period in which amounts are recognized, key drivers of changes and historical details underlying the line items and their associated drivers below.

See the Variable Account Value Information table within "Fee Income" below for drivers of changes in our variable account values and the Fixed Account Value Information table within "Net Investment Income and Interest Credited" below for drivers of changes in our fixed account values.

See "Consolidated Investments – Commercial Mortgage Loan Prepayment and Bond Make-Whole Premiums" below for more information on prepayment and bond make-whole premiums.

See "Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL – Unlocking" above for more information about unlocking.

Additional Information

We expect to continue making strategic investments during 2015 to improve our infrastructure and expand distribution that will result in higher expenses.

Net flows in this business fluctuate based on the timing of larger plans being implemented on our platform and terminating over the course of the year.

New deposits are an important component of net flows and key to our efforts to grow our business. Although deposits do not significantly affect current period income from operations, they are an important indicator of future profitability. The other component of net flows relates to the retention of the business. An important measure of retention is the lapse rate, which compares the amount of withdrawals to the average account values. The overall lapse rate for our annuity and mutual fund products was 16%, 13% and 13% for 2014, 2013 and 2012. The 2014 lapse rate was negatively impacted by a large case termination in the mid to large market during the fourth quarter of 2014.

Our net flows are negatively affected by the continued net outflows from our oldest blocks of annuities business (as presented on our Account Value Roll Forward table below as “Multi-Fund® and Other Variable Annuities”), which are also our higher margin product lines in this segment, due to the fact that they are mature blocks with much of the account values out of their surrender charge period. The proportion of these products to our total account values was 32%, 33% and 36% for 2014, 2013 and 2012, respectively. Due to this expected overall shift in business mix toward products with lower returns, a significant increase in new deposit production continues to be necessary to maintain earnings at current levels.

Our fixed annuity business includes products with discretionary and index-based crediting rates that are reset on a quarterly basis. Our ability to retain quarterly reset annuities will be subject to current competitive conditions at the time interest rates for these products reset. We expect to manage the effects of spreads on near-term income from operations through portfolio management and, to a lesser extent, crediting rate actions, which assumes no significant changes in net flows into or out of our fixed accounts or other changes that may cause interest rate spreads to differ from our expectations. For information on interest rate spreads and the interest rate risk due to falling interest rates, see “Part I – Item 1A. Risk Factors – Market Conditions – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals” and “Effect of Interest Rate Sensitivity” and “Interest Rate Risk on Fixed Insurance Businesses – Falling Rates” in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Fee Income

Average daily S&P 500	1,931	1,644	1,379	17%	19%

(1) Excludes the fixed portion of variable.

We charge expense assessments to cover insurance and administrative expenses. Expense assessments are generally equal to a percentage of the daily variable account values. Average daily account values are driven by net flows and the equity markets. Our expense assessments include fees we earn for the services that we provide to our mutual fund programs. In addition, for both our fixed and variable annuity contracts, we collect surrender charges when contract holders surrender their contracts during the surrender charge periods to protect us from premature withdrawals.

Net Investment Income and Interest Credited

Details underlying net investment income, interest credited (in millions) and our interest rate spread were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Net Investment Income					
Fixed maturity securities, mortgage loans on real estate and other, net of investment expenses	\$ 736	\$ 737	\$ 731	0%	1%

Reinvested interest credited (1)	474	470	453	1%	4%
Fixed annuity account values (1)	16,229	15,316	14,718	6%	4%
Average fixed account values (1)	15,555	15,041	14,055	3%	7%
Average invested assets on reserves	15,381	14,853	14,003	4%	6%

(1) Includes the fixed portion of variable.

A portion of our investment income earned is credited to the contract holders of our fixed annuity products, including the fixed portion of variable annuity contracts. We expect to earn a spread between what we earn on the underlying general account investments supporting the fixed annuity product line, including the fixed portion of variable annuity contracts, and what we credit to our fixed annuity contract holders' accounts, including the fixed portion of variable annuity contracts. Commercial mortgage loan prepayments and bond make-whole premiums, investment income on alternative investments and surplus investment income can vary significantly from period to period due to a number of factors and, therefore, may contribute to investment income results that are not indicative of the underlying trends.

Benefits

Benefits for this segment include changes in benefit reserves and our expected costs associated with purchases of derivatives used to hedge our benefit ratio unlocking.

Commissions and Other Expenses

Details underlying commissions and other expenses (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Commissions and Other Expenses					
Commissions:					
Deferrable	\$ 14	\$ 15	\$ 19	-7%	-21%
Non-deferrable	58	57	52	2%	10%
General and administrative expenses	309	305	314	1%	-3%

Income (loss) from operations	\$ 612	\$ 544	\$ 574	13%	-5%

(1) Includes term insurance premiums, which have a corresponding partial offset in benefits for changes in reserves.

(2) See "Realized Gain (Loss) and Benefit Ratio Unlocking" below.

Comparison of 2014 to 2013

Income from operations for this segment increased due primarily to the following:

- Higher other revenues due to the recapture of certain traditional and interest sensitive business under several yearly renewable term reinsurance treaties that were originally ceded to a reinsurer.
- Higher fee income attributable to growth in business in force and the effect of unlocking.

The increase in income from operations was partially offset primarily by the following:

- Higher benefits due to an increase in reserves related to the reinsurance recapture, unlocking and higher death claims attributable to growth in business in force.
- Higher commissions and other expenses driven by a reduction in DAC due to the reinsurance recapture, unlocking and higher margins than our model projections assumed.

Comparison of 2013 to 2012

Income from operations for this segment decreased due primarily to higher benefits attributable to the effect of unlocking and higher death claims, partially offset by lower commissions and other expenses due to the effect of unlocking.

We provide information about this segment's operating revenue and operating expense line items, the period in which amounts are recognized, key drivers of changes and historical details underlying the line items and their associated drivers below.

See "Consolidated Investments – Alternative Investments" below for more information on alternative investments.

See "Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL – Unlocking" above for more information about unlocking.

Strategies to Address Statutory Reserve Strain

Our insurance subsidiaries have statutory surplus and RBC levels above current regulatory required levels. Term products and UL products containing secondary guarantees require reserves calculated pursuant to the Valuation of Life Insurance Policies Model Regulation ("XXX") and Actuarial Guideline 38 ("AG38"), respectively. During the third quarter of 2013, the New York State Department of Financial Services ("NYDFS") announced that it would not recognize the National Association of Insurance Commissioners ("NAIC") revisions to AG38 in applying the New York law governing the reserves to be held for UL and VUL products

containing secondary guarantees. The change, which was effective as of December 31, 2013, impacts our New York-domiciled insurance subsidiary, the Lincoln Life & Annuity Company of New York (“LLANY”). LLANY discontinued the sale of these products in early 2013, but the change affects those policies sold prior to that time. We began phasing in the increase in reserves over five years beginning in 2013. As of December 31, 2014, we have increased reserves by \$180 million. The additional increase in reserves over the next three years is subject to ongoing discussions with the NYDFS. However, we do not expect the amount for each of the remaining years to exceed \$90 million per year. We do not expect the total reserve increase to have a material adverse effect on our financial condition.

Our insurance subsidiaries employ strategies to reduce the strain caused by XXX and AG38 by using long-dated LOCs as well as other financing transactions. Included in the LOCs issued as of December 31, 2014, and reported in the credit facilities table in Note 12, was approximately \$3.5 billion of long-dated LOCs issued to support inter-company reinsurance arrangements. Approximately \$2.4 billion of such LOCs were issued for UL products containing secondary guarantees (approximately \$1.8 billion will expire in 2031, \$350 million will expire in 2019, and approximately \$185 million will expire in 2018). Approximately \$1 billion of such LOCs were issued for term business solutions (approximately \$905 million will expire in 2023, and \$139 million is automatically renewable until 2023). We have also used the proceeds from senior note issuances of approximately \$875 million to execute long-term structured solutions supporting UL products containing secondary guarantees. LOCs and related capital market solutions lower the capital effect of term products and UL products containing secondary guarantees. An inability to obtain appropriate capital market solutions could affect our returns on our in-force term products and UL products containing secondary guarantees. However, we believe that our insurance subsidiaries have sufficient capital to support the increase in statutory reserves, based on our current reserve projections, if such structures were no longer available. See “Part I – Item 1A. Risk Factors – Legislative, Regulatory and Tax – Attempts to mitigate the impact of Regulation XXX and Actuarial Guideline 38 may fail in whole or in part resulting in an adverse effect on our financial condition and results of operations” and “Review of Consolidated Financial Condition – Liquidity and Capital Resources – Sources of Liquidity and Cash Flow – Subsidiaries’ Statutory Reserving and Surplus” for further information on XXX and AG38 reserves. See the table in “Commissions and Other Expenses” below for the presentation of our expenses associated with reserve financing.

Additional Information

During the fourth quarter of 2014, we entered into an agreement to recapture certain traditional and interest sensitive business under several yearly renewable term reinsurance treaties that were originally ceded to a reinsurer. As part of this agreement, we received cash consideration of \$500 million, of which \$78 million represented reimbursement for prepaid reinsurance premiums related to the recaptured treaties. We recognized a one-time gain of \$57 million, after-tax, related to this recapture with the remaining difference between the proceeds and the gain being driven primarily by increases in reserves of \$226 million and a reduction of DAC of \$123 million.

We expect to manage the effects of spreads on near-term income from operations through portfolio management, which assumes no significant changes in net flows into or out of our fixed accounts or other changes that may cause interest rate spreads to differ from our expectations.

For information on interest rate spreads and the interest rate risk due to falling interest rates, see “Part I – Item 1A. Risk Factors – Market Conditions – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals” and “Effect of Interest Rate Sensitivity” and “Interest Rate Risk on Fixed Insurance Businesses – Falling Rates” in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Insurance Premiums

Insurance premiums relate to traditional products and are a function of the rates priced into the product and the level of insurance in force. Insurance in force, in turn, is driven by sales, persistency and mortality experience.

Fee Income

Details underlying fee income, sales, net flows, account values and in-force face amount (in millions) were as follows:

	For the Years Ended			Change Over

Contract Holder Assessments	\$ 3,592	\$ 3,449	\$ 3,284	4%	5%
-----------------------------	----------	----------	----------	----	----

	As of December 31,			Change Over	
	2014	2013	2012	2014	2013
Account Values					
UL	\$ 31,531	\$ 30,627	\$ 29,329	3%	4%
VUL	8,385	7,201	5,731	16%	26%
Interest-sensitive whole life	2,297	2,285	2,265	1%	1%
Total account values	\$ 42,213	\$ 40,113	\$ 37,325	5%	7%
In-Force Face Amount					
UL and other	\$ 324,356	\$ 318,444	\$ 311,235	2%	2%
Term insurance	316,513	298,373	279,322	6%	7%
Total in-force face amount	\$ 640,869	\$ 616,817	\$ 590,557	4%	4%

Fee income relates only to interest-sensitive products and includes mortality assessments, expense assessments (net of deferrals and amortization related to DFEL) and surrender charges. Mortality and expense assessments are deducted from our contract holders' account values. These amounts are a function of the rates priced into the product and premiums received, face amount in force and account values. Insurance in force, in turn, is driven by sales, persistency and mortality experience.

Sales are not recorded as a component of revenues (other than for traditional products) and do not have a significant effect on current quarter income from operations but are indicators of future profitability. Generally, we have higher sales during the second half of the year with the fourth quarter being our strongest.

Sales in the table above and as discussed above were reported as follows:

- MoneyGuard®, our linked-benefit product – 15% of total expected premium deposits;
- Single premium bank-owned UL and VUL (“BOLI”) – 15% of single premium deposits;
- UL, VUL, and corporate-owned UL and VUL (“COLI”) – first year commissionable premiums plus 5% of excess premiums received, including an adjustment for internal replacements of approximately 50% of commissionable premiums; and
- Term – 100% of annualized first year premiums.

Changes in the marketplace and continuing efforts to increase sales of higher return products in a low interest rate environment have resulted in a shift in our business mix.

Net Investment Income and Interest Credited

Details underlying net investment income, interest credited (in millions) and our interest rate spread were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013

	For the Years Ended December			Change Over Prior Year	
	31, 2014	2013	2012	2014	2013
Averages					
Attributable to interest-sensitive products:					
Invested assets on reserves	\$ 37,427	\$ 35,819	\$ 33,779	4%	6%
Account values - universal and whole life	33,857	32,868	31,578	3%	4%
Attributable to traditional products:					
Invested assets on reserves	4,239	4,378	4,307	-3%	2%

A portion of the investment income earned for this segment is credited to contract holder accounts. Statutory reserves will typically grow at a faster rate than account values because of the AG38 reserve requirements. Invested assets are based upon the statutory reserve liabilities and are affected by various reserve adjustments, including financing

transactions providing relief from AG38 reserve requirements. These financing transactions lead to a transfer of invested assets from this segment to Other Operations. We expect to earn a spread between what we earn on the underlying general account investments and what we credit to our contract holders' accounts. We use our investment income to offset the earnings effect of the associated growth of our policy reserves for traditional products. Commercial mortgage loan prepayments and bond make-whole premiums and investment income on alternative investments can vary significantly from period to period due to a number of factors, and, therefore, may contribute to investment income results that are not indicative of the underlying trends.

Benefits

Details underlying benefits (dollars in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Benefits					
Death claims direct and assumed	\$ 3,462	\$ 3,318	\$ 2,976	4%	11%
Death claims ceded	(1,598)	(1,610)	(1,415)	1%	-14%
Reserves released on death	(532)	(518)	(490)	-3%	-6%
Net death benefits	1,332	1,190	1,071	12%	11%
Change in secondary guarantee life insurance product reserves:					
Change in reserves, excluding unlocking	515	492	464	5%	6%
Unlocking	12	(18)	(145)	167%	88%
Change in linked-benefit product reserves:					
Change in reserves, excluding unlocking	91	60	63	52%	-5%
Unlocking	23	3	-	NM	NM
Reinsurance recapture	226	-	-	NM	NM
Other benefits (1)	236	251	271	-6%	-7%
Total benefits	\$ 2,435	\$ 1,978	\$ 1,724	23%	15%
Death claims per \$1,000 of in-force	2.12	1.98	1.84	7%	8%

(1) Includes primarily changes in reserves and dividends on traditional and other products.

Benefits for this segment include claims incurred during the period in excess of the associated reserves for its interest-sensitive and traditional products. In addition, benefits include the change in secondary guarantee and linked-benefit life insurance product reserves. These reserves are affected by changes in expected future trends of expense assessments causing unlocking adjustments to these liabilities similar to DAC, VOBA and DFEL. See "Future Contract Benefits and Other Contract Holder Funds" in Note 1 for additional information.

Commissions and Other Expenses

Details underlying commissions and other expenses (in millions) were as follows:

	For the Years Ended December 31,			Change Over Prior Year	
	2014	2013	2012	2014	2013
Commissions and Other Expenses					
Commissions	\$ 690	\$ 616	\$ 532	12%	16%
General and administrative expenses	497	490	483	1%	1%
Expenses associated with reserve financing	78	74	67	5%	10%
Taxes, licenses and fees	148	147	133	1%	11%
Total expenses incurred	1,413	1,327	1,215	6%	9%
DAC and VOBA deferrals	(760)	(703)	(600)	-8%	-17%
Total expenses recognized before amortization	653	624	615	5%	1%
DAC and VOBA amortization, net of interest:					
Amortization, net of interest, excluding unlocking	491	440	467	12%	-6%
Unlocking	41	7	147	NM	-95%
Other intangible amortization	4	4	4	0%	0%
Reinsurance recapture	123	-	-	NM	NM
Total commissions and other expenses	\$ 1,312	\$ 1,075	\$ 1,233	22%	-13%
DAC and VOBA Deferrals					
As a percentage of sales	113.6%	101.6%	102.0%		

Commissions and costs that result directly from and are essential to successful acquisition of new or renewal business are deferred to the extent recoverable and for our interest-sensitive products are generally amortized over the life of the contracts in relation to EGPs. For

our traditional products, DAC and VOBA are amortized on either a straight-line basis or as a level percent of premium of the related contracts, depending on the block of business. When comparing DAC and VOBA deferrals as a percentage of sales for 2014 and 2013, the increase was primarily a result of changes in sales mix to products with higher commission rates.

RESULTS OF GROUP PROTECTION

Income (Loss) from Operations

Details underlying the results for Group Protection (in millions) were as follows:

Life	\$ 18	\$ 15	\$ 29	20%	-48%
Disability	(1)	51	37	NM	38%
Dental	2	1	1	100%	0%
Total non-medical	19	67	67	-72%	0%
Medical	4	4	5	0%	-20%
Income (loss) from operations	\$ 23	\$ 71	\$ 72	-68%	-1%

Comparison of 2014 to 2013

Income from operations for this segment decreased due primarily to unfavorable total non-medical loss ratio experience attributable to increased long-term disability incidence and a decline in long-term disability recoveries in 2014 and favorable reserve adjustments related to our long-term disability business in 2013.

Comparison of 2013 to 2012

Income from operations for this segment decreased due primarily to higher commissions and other expenses attributable to an increase in business as well as strategic investments in technology platforms and distribution expansion efforts.

The decrease in income from operations was partially offset by the following:

- Growth in insurance premiums driven by normal, organic business growth in our non-medical products.
- More favorable total non-medical loss ratio experience driven by favorable reserve adjustments related to our long-term disability business.

We provide information about this segment's operating revenue and operating expense line items, the period in which amounts are recognized, key drivers of changes and historical details underlying the line items and their associated drivers below.

Additional Information

Management compares trends in actual loss ratios to pricing expectations because group-underwriting risks change over time. We expect normal fluctuations in our composite non-medical loss ratios of this segment, as claims experience is inherently uncertain. For every one percent increase in the loss ratio, we would expect an approximate annual \$13 million to \$15 million decrease to income from operations. During 2014, our total non-medical loss ratio of 78.4% was above our long-term expectation of 71% to 74% due primarily to an increase in long-term disability incidence and a decline in long-term disability recovery experience. We are taking actions to manage the effects of our loss ratio results, such as continuing to implement pricing actions to better reflect our experience going forward. We believe the introduction of a new claims management system and its associated process changes was a primary cause of the deterioration in the non-medical loss ratio during 2014. We expect to approach our normal target margins towards the end of 2016 to 2017 timeframe. See “Insurance Premiums” below for more information on our pricing actions. We expect the loss ratios to be above the high end of our target range during 2015.

For information on the effects of current interest rates on our long-term disability claim reserves, see “Effect of Interest Rate Sensitivity” and “Interest Rate Risk on Fixed Insurance Businesses – Falling Rates” in “Item 7A. Quantitative and Qualitative Disclosures About Market Risk – Interest Rate Risk.”

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Insurance Premiums

Details underlying insurance premiums (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Insurance Premiums by Product Line					
Life	\$ 930	\$ 844	\$ 770	10%	10%
Disability	971	903	821	8%	10%
Dental	228	206	193	11%	7%
Total non-medical	2,129	1,953	1,784	9%	9%
Medical	123	131	135	-6%	-3%
Total insurance premiums	\$ 2,252	\$ 2,084	\$ 1,919	8%	9%

Sales	\$ 479	\$ 541	\$ 458	-11%	18%
-------	--------	--------	--------	------	-----

Our cost of insurance and policy administration charges are embedded in the premiums charged to our customers. The premiums are a function of the rates priced into the product and our business in force. Business in force, in turn, is driven by sales and persistency experience.

Sales relate to new contract holders and new programs sold to existing contract holders. We believe that the trend in sales is an important indicator of development of business in force over time. Sales in the table above are the combined annualized premiums for our life, disability and dental products. When comparing sales for 2014 to 2013, the decrease was partly the result of pricing actions primarily on our employer-paid life and disability business, and a slowing of industry sales. We continue to shift the business mix to employee-paid blocks of business, which we expect will improve the overall profitability of the business. The proportion of employee-paid sales to our total sales was 52%, 47% and 38% for 2014, 2013 and 2012.

Net Investment Income

We use our investment income to offset the earnings effect of the associated build of our policy reserves, which are a function of our insurance premiums and the yields on our invested assets.

Benefits and Interest Credited

Details underlying benefits and interest credited (in millions) and loss ratios by product line were as follows:

	For the Years Ended December			Change Over	
	31, 2014	2013	2012	Prior Year 2014	2013
Benefits and Interest Credited by Product Line					
Life	\$ 715	\$ 655	\$ 582	9%	13%
Disability	792	639	604	24%	6%
Dental	162	151	143	7%	6%
Total non-medical	1,669	1,445	1,329	16%	9%
Medical	109	117	118	-7%	-1%

Life	76.9%	77.6%	75.5%		
Disability	81.6%	70.8%	73.6%		
Dental	71.1%	73.2%	74.5%		
Total non-medical	78.4%	74.0%	74.5%		
Medical	88.7%	88.8%	87.8%		

Commissions and Other Expenses

Details underlying commissions and other expenses (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31, 2014	2013	2012	Prior Year 2014	2013

Commissions and Other Expenses					
Commissions	\$ 273	\$ 252	\$ 223	8%	13%
General and administrative expenses	319	321	288	-1%	11%
Taxes, licenses and fees	58	54	49	7%	10%
Total expenses incurred	650	627	560	4%	12%
DAC deferrals	(75)	(91)	(75)	18%	-21%
Total expenses recognized before amortization	575	536	485	7%	11%
DAC and VOBA amortization, net of interest	57	53	48	8%	10%
Total commissions and other expenses	\$ 632	\$ 589	\$ 533	7%	11%
DAC Deferrals					
As a percentage of insurance premiums	3.3%	4.4%	3.9%		

Commissions and other costs that result directly from and are essential to the successful acquisition of new or renewal business are deferred to the extent recoverable and are amortized in relation to the revenues of the related contracts. Certain broker commissions that vary with and are related to paid premiums are expensed as incurred. The level of expenses is an important driver of profitability for this segment as group insurance contracts are offered within an environment that competes on the basis of price and service.

RESULTS OF OTHER OPERATIONS

Income (Loss) from Operations

Details underlying the results for Other Operations (in millions) were as follows:

	For the Years Ended December 31,			Change Over Prior Year	
	2014	2013	2012	2014	2013
Operating Revenues					
Insurance premiums	\$ 5	\$ 1	\$ 4	NM	-75%
Net investment income	286	266	259	8%	3%
Amortization of deferred gain on business sold through reinsurance	71	72	72	-1%	0%
Media revenues (net)	68	72	81	-6%	-11%
Other revenues	2	6	7	-67%	-14%
Total operating revenues	432	417	423	4%	-1%
Operating Expenses					
Interest credited	96	109	122	-12%	-11%
Benefits	121	113	138	7%	-18%
Media expenses	60	62	66	-3%	-6%
Other expenses	53	62	93	-15%	-33%
Interest and debt expense	268	264	268	2%	-1%
Total operating expenses	598	610	687	-2%	-11%
Income (loss) from operations before taxes	(166)	(193)	(264)	14%	27%
Federal income tax expense (benefit)	(57)	(71)	(177)	20%	60%
Income (loss) from operations	\$ (109)	\$ (122)	\$ (87)	11%	-40%

Comparison of 2014 to 2013

Loss from operations for Other Operations decreased due primarily to the following:

- Higher net investment income, net of interest credited, related to higher average invested assets driven by distributable earnings received from our insurance segments, partially offset by repurchases of common stock.

- Lower other expenses attributable to the effect of changes in our stock price on our deferred compensation plans, as our stock price modestly increased during 2014 compared to significantly increasing during 2013, partially offset by higher legal accruals during 2014 (see “Other Expenses” below for more information).

Comparison of 2013 to 2012

Loss from operations for Other Operations increased due primarily to more favorable tax benefits during 2012 related to the release of reserves associated with prior tax years that were closed in 2012.

The increase in loss from operations was partially offset by the following:

- Lower other expenses driven by restructuring charges and higher claim settlement accruals in 2012 and a reduction in our state guaranty funds assessment accrual in 2013.
- Higher benefits in 2012 due to higher claim settlement accruals.

We provide information about Other Operations’ operating revenue and operating expense line items, the period in which amounts are recognized, key drivers of changes and historical details underlying the line items and their associated drivers below.

Additional Information

The deferred gain on business sold through reinsurance will be substantially amortized during the first quarter of 2017.

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Net Investment Income and Interest Credited

We utilize an internal formula to determine the amount of capital that is allocated to our insurance segments. Investment income on capital in excess of the calculated amounts is reported in Other Operations. If our insurance segments require increases in statutory reserves, surplus or investments, the amount of excess capital that is retained by Other Operations would decrease and net investment income would be negatively affected.

Write-downs for OTTI decrease the recorded value of our invested assets owned by the insurance segments. These write-downs are not included in the income from operations of our insurance segments. When impairment occurs, assets are transferred to the insurance segments' portfolios and will reduce the future net investment income for Other Operations. Statutory reserve adjustments for our insurance segments can also cause allocations of invested assets between the insurance segments and Other Operations.

The majority of our interest credited relates to our reinsurance operations sold to Swiss Re Life & Health America, Inc. ("Swiss Re") in 2001. A substantial amount of the business was sold through indemnity reinsurance transactions, which is still recorded in our consolidated financial statements. The interest credited corresponds to investment income earnings on the assets we continue to hold for this business. There is no effect to income or loss in Other Operations or on a consolidated basis for these amounts because interest earned on the blocks that continue to be reinsured is passed through to Swiss Re in the form of interest credited.

Benefits

Benefits are recognized when incurred for Institutional Pension products and disability income business.

Other Expenses

Details underlying other expenses (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
General and administrative expenses:					
Legal	\$ 7	\$ 1	\$ -	NM	NM
Branding	31	30	28	3%	7%
Other (1)	47	60	46	-22%	30%
Total general and administrative expenses	85	91	74	-7%	23%
Restructuring charges	-	-	20	NM	-100%
Taxes, licenses and fees (2)	(20)	(18)	10	-11%	NM
Inter-segment reimbursement associated with reserve financing and LOC expenses (3)	(12)	(11)	(11)	-9%	0%
Total other expenses	\$ 53	\$ 62	\$ 93	-15%	-33%

- (1) Includes expenses that are corporate in nature including charitable contributions, the portion of our deferred compensation plan expense attributable to participants' selection of LNC stock as the measure for their investment return and other expenses not allocated to our insurance segments.
- (2) Includes state guaranty funds assessments to cover losses to contract holders of insolvent or rehabilitated insurance companies. Mandatory assessments may be partially recovered through a reduction in future premium taxes in some states.
- (3) Consists of reimbursements to Other Operations from the Life Insurance segment for the use of proceeds from certain issuances of senior notes that were used as long-term structured solutions, net of expenses incurred by Other Operations for its use of LOCs.

Interest and Debt Expense

Our current level of interest expense may not be indicative of the future due to, among other things, the timing of the use of cash, the availability of funds from our inter-company cash management program and the future cost of capital. For additional information on our financing activities, see "Review of Consolidated Financial Condition – Liquidity and Capital Resources – Sources of Liquidity and Cash Flow – Financing Activities" below.

REALIZED GAIN (LOSS) AND BENEFIT RATIO UNLOCKING

Details underlying realized gain (loss), after-DAC (1) and benefit ratio unlocking (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Components of Realized Gain (Loss), Pre-Tax

Excluded realized gain (loss) net of benefit ratio unlocking, after-tax	\$ (99)	\$ (142)	\$ -	30%	NM

(1) DAC refers to the associated amortization of DAC, VOBA, DSI and DFEL and changes in other contract holder funds and funds withheld reinsurance assets and liabilities.

(2) See "LFM" in Note 3.

For factors that could cause actual results to differ materially from those set forth in this section, see "Part I – Item 1A. Risk Factors" and "Forward-Looking Statements – Cautionary Language" above.

For information on our counterparty exposure, see “Item 7A. Quantitative and Qualitative Disclosures About Market Risk.”

Comparison of 2014 to 2013

We had zero net realized gains and losses during 2014 as compared to losses during 2013 driven primarily by the following components of excluded realized gain (loss), which we have described net of benefit ratio unlocking, after-tax:

- Lower losses on variable annuity net derivatives results during 2014 as compared to 2013 attributable to the effect of a favorable GLB NPR component due to our associated reserves increasing during 2014 and the effect of unlocking. These lower losses on variable annuity net derivatives results were partially offset by more unfavorable hedge program performance in 2014, driven primarily by more volatile capital markets.
- General improvement in the credit markets during 2014 leading to a decline in OTTI.
- Higher gross realized gains related to certain investments during 2014 originating from asset sales to reposition the investment portfolio.

The net zero realized gains and losses were partially offset by losses on the mark-to-market on certain instruments during 2014 as compared to gains during 2013 attributable primarily to lower gains on variable interest entities’ liabilities (see Note 4) and a decrease in interest rates leading to losses on derivative investments (not including those associated with our variable annuity net derivatives results).

Comparison of 2013 to 2012

We had realized losses during 2013 as compared to gains during 2012 driven primarily by the following components of excluded realized gain (loss), which we have described net of benefit ratio unlocking, after-tax:

- Losses on variable annuity net derivatives results during 2013 as compared to gains during 2012 attributable to the effect of unlocking and a more unfavorable GLB NPR component due to our associated reserves declining, as a result of more favorable equity market growth. These losses were partially offset by less narrowing of our credit spreads during 2013.
- Lower gains on the mark-to-market on certain instruments during 2013 attributable to an increase in interest rates leading to a decrease in the value of our trading securities.

The realized losses were partially offset by the following:

- General improvement in the credit markets during 2013 leading to a decline in OTTI.
- Lower gross realized losses related to certain investments during 2013 originating from asset sales to reposition the investment portfolio.

See “Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL – Unlocking” above for information about unlocking.

See “Variable Annuity Net Derivatives Results” below for a discussion of how our NPR adjustment is determined.

Operating Realized Gain (Loss)

Operating realized gain (loss) includes indexed annuity net derivatives results representing the net difference between the change in the fair value of the S&P 500 call options that we hold and the change in the fair value of the embedded derivative liabilities of our indexed annuity products. The change in the fair value of the liability for the embedded derivative represents the amount that is credited to the indexed annuity contract.

Our GWB, GIB and 4LATER® features have elements of both benefit reserves and embedded derivative reserves. We calculate the value of the embedded derivative reserves and the benefit reserves based on the specific characteristics of each GLB feature. For our GLBs that meet the definition of an embedded derivative under the Derivatives and Hedging Topic of the FASB ASC, we record them at fair value on our Consolidated Balance Sheets with changes in fair value recorded in realized gain (loss) on our Consolidated Statements of Comprehensive Income

(Loss). In bifurcating the embedded derivative, we attribute to the embedded derivative the portion of total fees collected from the contract holder that relates to the GLB riders (the “attributed fees”). These attributed fees represent the present value of future claims expected to be paid for the GLB at the inception of the contract (the “net valuation premium”) plus a margin that a theoretical market participant would include for risk/profit (the “risk/profit margin”).

We also include the risk/profit margin portion of the GLB attributed rider fees in operating realized gain (loss) and include the net valuation premium of the GLB attributed rider fees in excluded realized gain (loss). For our Annuities and Retirement Plan Services segments, the excess of total fees collected from the contract holders over the GLB attributed rider fees is reported in fee income.

Realized Gain (Loss) Related to Certain Investments

See “Consolidated Investments – Realized Gain (Loss) Related to Certain Investments” below.

Gain (Loss) on the Mark-to-Market on Certain Instruments

Gain (loss) on the mark-to-market on certain instruments, including those associated with our consolidated variable interest entities (“VIEs”) represents changes in the fair values of certain derivative investments (not including those associated with our variable annuity net derivatives results), reinsurance related embedded derivatives and trading securities.

See Note 4 for information about our consolidated VIEs.

Variable Annuity Net Derivatives Results

Our variable annuity net derivatives results include the net valuation premium, the change in the GLB embedded derivative reserves and the change in the fair value of the derivative instruments we own to hedge them, including the cost of purchasing the hedging instruments. In addition, these results include the changes in reserves not accounted for at fair value and results from benefit ratio unlocking on our GDB and GLB riders and the change in the fair value of the derivative instruments we own to hedge the benefit ratio unlocking on our GDB riders.

We use derivative instruments to hedge our exposure to the risks and earnings volatility that result from changes in the GLB embedded derivative reserves. The change in fair value of these derivative instruments is designed to generally

offset the change in embedded derivative reserves. Our variable annuity net derivatives results can be volatile especially when sudden and significant changes in equity

73

markets and/or interest rates occur. We do not attempt to hedge the change in the NPR component of the liability. The NPR factors affect the discount rate used in the calculation of the GLB embedded derivative reserve. Our methodology for calculating the NPR component of the embedded derivative reserve utilizes an extrapolated 30-year NPR spread curve applied to a series of expected cash flows over the expected life of the embedded derivative. Our cash flows consist of both expected fees to be received from contract holders and benefits to be paid, and these cash flows are different on a pre- and post-NPR basis. We utilize a model based on our holding company's credit default swap ("CDS") spread adjusted for items, such as the security of policyholder liabilities relative to the security of insurance company debt. Because the guaranteed benefit liabilities are contained within our insurance subsidiaries, we apply items, such as the effect of our insurance subsidiaries' claims-paying ratings compared to holding company credit risk and the over-collateralization of insurance liabilities, in order to determine factors that are representative of a theoretical market participant's view of the NPR of the specific liability within our insurance subsidiaries.

Details underlying our variable annuity hedging program (dollars in millions) were as follows:

	As of December 31, 2014	As of September 30, 2014	As of June 30, 2014	As of March 31, 2014	As of December 31, 2013
Variable annuity hedge program assets (liabilities)	\$ 1,722	\$ 1,039	\$ 502	\$ 335	\$ (49)
Variable annuity reserves – asset (liability):					
Embedded derivative reserves, pre-NPR (1)	\$ 50	\$ 694	\$ 1,043	\$ 1,067	\$ 1,345
NPR	(70)	(102)	(111)	(88)	(101)
Embedded derivative reserves	(20)	592	932	979	1,244
Insurance benefit reserves	(341)	(319)	(265)	(258)	(236)
Total variable annuity reserves – asset (liability)	\$ (361)	\$ 273	\$ 667	\$ 721	\$ 1,008
10-year CDS spread	1.25%	1.26%	1.15%	1.27%	1.46%
NPR factor related to 10-year CDS spread	0.20%	0.19%	0.08%	0.13%	0.15%

(1) Embedded derivative reserves in an asset (liability) position indicate we estimate the present value of future benefits to be less (greater) than the present value of future net valuation premiums.

The following shows the approximate hypothetical effect to net income, pre-DAC (1), pre-tax (in millions) for changes in the NPR factor along all points on the spread curve as of December 31, 2014:

Hypothetical
Effect

NPR factor:

Down 20 basis points to zero	\$ (140)
Up 20 basis points	80

⁽¹⁾ DAC refers to the associated amortization of DAC, VOBA, DSI and DFEL and changes in other contract holder funds and funds withheld reinsurance assets and liabilities.

See “Critical Accounting Policies and Estimates – Derivatives – GLB” above for additional information about our guaranteed benefits.

Indexed Annuity Forward-Starting Option

The liability for the forward-starting option reflects changes in the fair value of embedded derivative liabilities related to index call options we may purchase in the future to hedge contract holder index allocations applicable to future reset periods for our indexed annuity products accounted for under the Derivatives and Hedging and the Fair Value Measurements and Disclosures Topics of the FASB ASC. These fair values represent an estimate of the cost of the options we will purchase in the future, discounted back to the date of the balance sheet, using current market indications of volatility and interest rates, which can vary significantly from period to period due to a number of factors and therefore can provide results that are not indicative of the underlying trends.

CONSOLIDATED INVESTMENTS

Details underlying our consolidated investment balances (in millions) were as follows:

	As of December 31,		Percentage of Total Investments	
	2014	2013	As of December 31, 2014	2013

Derivative investments	1,860	881	1.8%	0.9%
Alternative investments	1,109	1,002	1.1%	1.1%
Other investments	600	216	0.6%	0.3%
Total investments	\$ 102,967	\$ 95,291	100.0%	100.0%

Investment Objective

Invested assets are an integral part of our operations. We follow a balanced approach to investing for both current income and prudent risk management, with an emphasis on generating sufficient current income, net of income tax, to meet our obligations to customers, as well as other general liabilities. This balanced approach requires the evaluation of expected return and risk of each asset class utilized, while still meeting our income objectives. This approach is important to our asset-liability management because decisions can be made based upon both the economic and current investment income considerations affecting assets and liabilities. For a discussion of our risk management process, see "Item 7A. Quantitative and Qualitative Disclosures About Market Risk."

Investment Portfolio Composition and Diversification

Fundamental to our investment policy is diversification across asset classes. Our investment portfolio, excluding cash and invested cash, is composed of fixed maturity securities, mortgage loans on real estate, real estate (either wholly-owned or in joint ventures) and other long-term investments. We purchase investments for our segmented

portfolios that have yield, duration and other characteristics that take into account the liabilities of the products being supported.

We have the ability to maintain our investment holdings throughout credit cycles because of our capital position, the long-term nature of our liabilities and the matching of our portfolios of investment assets with the liabilities of our various products.

Fixed Maturity and Equity Securities Portfolios

Fixed maturity and equity securities consist of portfolios classified as AFS and trading. Mortgage-backed and private securities are included in both of the AFS and trading portfolios.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Details underlying our fixed maturity and equity securities portfolios by industry classification (in millions) are presented in the tables below. These tables agree in total with the presentation of AFS securities in Note 5; however, the categories below represent a more detailed breakout of the AFS portfolio. Therefore, the investment classifications listed below do not agree to the investment categories provided in Note 5.

- (1) In June 2014, the Barclays Global Sector Classification Scheme reclassified bonds from utilities to the energy industry. Reflected above is the reclassification of amortized cost and fair value of \$2.5 billion and \$2.7 billion, respectively, in 2014 and \$2.7 billion and \$2.9 billion, respectively, in 2013.
- (2) Certain of our trading securities support our modified coinsurance arrangements (“Modco”) and the investment results are passed directly to the reinsurers. Refer to the “Trading Securities” section for further details.

AFS Securities

In accordance with the AFS accounting guidance, we reflect stockholders' equity as if unrealized gains and losses were actually recognized, and consider all related accounting adjustments that would occur upon such a hypothetical recognition of unrealized gains and losses. Such related balance sheet effects include adjustments to the balances of DAC, VOBA, DFEL, future contract benefits, other contract holder funds and deferred income taxes. Adjustments to each of these balances are charged or credited to AOCI. For instance, DAC is adjusted upon the recognition of unrealized gains or losses because the amortization of DAC is based upon an assumed emergence of gross profits on certain insurance business. Deferred income tax balances are also adjusted because unrealized gains or losses do not affect actual taxes currently paid.

The quality of our AFS fixed maturity securities portfolio, as measured at estimated fair value and by the percentage of fixed maturity AFS securities invested in various ratings categories, relative to the entire fixed maturity AFS security portfolio (in millions) was as follows:

NAIC Designation (1)	Rating Agency Equivalent Designation (1)	As of December 31, 2014			As of December 31, 2013		
		Amortized Cost	Fair Value	% of Total	Amortized Cost	Fair Value	% of Total
Investment Grade Securities

(1) Based upon the rating designations determined and provided by the NAIC or the major credit rating agencies (Fitch Ratings ("Fitch"), Moody's Investors Service ("Moody's") and S&P). For securities where the ratings assigned by the major credit agencies are not equivalent, the second highest rating assigned is used. For those securities where ratings by the major credit rating agencies are not available, which does not represent a significant amount of our total fixed maturity AFS securities, we base the ratings disclosed upon internal ratings.

Comparisons between the NAIC ratings and rating agency designations are published by the NAIC. The NAIC assigns securities quality ratings and uniform valuations, which are used by insurers when preparing their annual statements. The NAIC ratings are similar to the rating agency designations of the Nationally Recognized Statistical Rating Organizations for marketable bonds. NAIC ratings 1 and 2 include bonds generally considered investment grade (rated Baa or higher by Moody's, or rated BBB- or higher by S&P and Fitch) by such ratings organizations. However, securities rated NAIC 1 and 2 could be deemed below investment grade by the rating agencies as a result of the current RBC rules for residential mortgage-backed securities ("RMBS") and CMBS for statutory reporting. NAIC ratings 3 through 6 include bonds generally considered below investment grade (rated Ba or lower by Moody's, or rated BB+ or lower by S&P and Fitch).

As of December 31, 2014 and 2013, 86.9% and 92.9%, respectively, of the total publicly traded and private securities in an unrealized loss position were investment grade. See Note 5 for maturity date information for our fixed maturity investment portfolio. Our gross unrealized losses, including the portion of OTTI recognized in other comprehensive income (loss) ("OCI"), on AFS securities as of December 31, 2014, decreased \$836 million. As more fully described in Note 1, we regularly review our investment holdings for OTTI. We believe the unrealized loss position as of December 31, 2014, does not represent OTTI as: (i) we do not intend to sell the debt securities; (ii) it is not more likely than not that we will be required to sell the debt securities before recovery of their amortized cost basis; (iii) the estimated future cash flows are equal to or greater than the amortized cost basis of the debt securities; and (iv) we have the ability and intent to hold the equity securities for a period of time sufficient for recovery. For further information on our unrealized losses on AFS securities, see "Composition by Industry Categories of our Unrealized Losses on AFS Securities" below.

Selected information for certain AFS securities in a gross unrealized loss position (dollars in millions) as of December 31, 2014, was as follows:

	Fair Value	Gross Unrealized Losses and OTTI	Estimated Years Until Call or Maturity	Estimated Average Years Until Recovery	Subordination Current	Level Origination
CMBS	\$ 140	\$ 11	3 to 38	15	7.4%	7.0%
Hybrid and redeemable preferred securities	207	40	1 to 53	22	N/A	N/A

As provided in the table above, many of the securities in these categories are long-dated with some of the preferred securities being perpetual. This is purposeful as it matches the long-term nature of our liabilities associated with our life insurance and annuity products. See “Item 7A. Quantitative and Qualitative Disclosures About Market Risk” where we present information related to maturities of securities and the expected cash flows for rate sensitive liabilities and maturities of our holding company debt, which also demonstrates the long-term nature of the cash flows associated with these items. Because of this relationship, we do not believe it will be necessary to sell these securities before they recover or mature. For these securities, the estimated range and average period until recovery is the call or maturity period. It is difficult to predict or project when the securities will recover as it is dependent upon a number of factors including the overall economic climate. We do not believe the impairment is other than temporary for these securities as long as the expected future cash flows are projected to be sufficient to recover the amortized cost of these securities.

The actual range and period until recovery could vary significantly depending on a variety of factors, many of which are out of our control. There are several items that could affect the length of the period until recovery, such as the pace of economic recovery, level of delinquencies, performance of the underlying collateral, changes in market interest rates, exposures to various industry or geographic conditions, market behavior and other market conditions.

We concluded: (i) that it is not more likely than not that we will be required to sell the fixed maturity AFS securities before recovery of their amortized cost basis; (ii) that the estimated future cash flows are equal to or greater than the amortized cost basis of the debt securities; and (iii) that we have the ability to hold the equity AFS securities for a period of time sufficient for recovery. This conclusion is consistent with our asset-liability management process. Management considers the following as part of the evaluation:

- The current economic environment and market conditions;
- Our business strategy and current business plans;
- The nature and type of security, including expected maturities and exposure to general credit, liquidity, market and interest rate risk;
- Our analysis of data from financial models and other internal and industry sources to evaluate the current effectiveness of our hedging and overall risk management strategies;

- The current and expected timing of contractual maturities of our assets and liabilities, expectations of prepayments on investments and expectations for surrenders and withdrawals of life insurance policies and annuity contracts;
- The capital risk limits approved by management; and
- Our current financial condition and liquidity demands.

To determine the recoverability of a debt security, we consider the facts and circumstances surrounding the underlying issuer including, but not limited to, the following:

- Historical and implied volatility of the security;
- Length of time and extent to which the fair value has been less than amortized cost;
- Adverse conditions specifically related to the security or to specific conditions in an industry or geographic area;
- Failure, if any, of the issuer of the security to make scheduled payments; and
- Recoveries or additional declines in fair value subsequent to the balance sheet date.

As reported on our Consolidated Balance Sheets, we had \$106.9 billion of investments and cash, which exceeded the liabilities for our future obligations under insurance policies and contracts, net of amounts recoverable from reinsurers, which totaled \$89.9 billion as of December 31, 2014. If it were necessary to liquidate securities prior to maturity or call to meet cash flow needs, we would first look to those securities that are in an unrealized gain position, which had a fair value of \$75.3 billion, excluding consolidated VIEs in the amount of \$598 million, as of December 31, 2014, rather than selling securities in an unrealized loss position. The amount of cash that we have on hand at any point in time takes into account our liquidity needs in the future, other sources of cash, such as the maturities of investments, interest and dividends we earn on our investments and the ongoing cash flows from new and existing business.

See “AFS Securities – Evaluation for Recovery of Amortized Cost” in Note 1 and Note 5 for additional discussion.

As of December 31, 2014 and 2013, the estimated fair value for all private placement securities was \$14.4 billion and \$13.3 billion, respectively, representing 14% of total invested assets.

For information regarding our VIEs' fixed maturity securities, see Note 4.

Trading Securities

Trading securities, which in certain cases support reinsurance funds withheld and our Modco reinsurance agreements, are carried at fair value and changes in fair value are recorded in net income as they occur. Investment results for these certain portfolios, including gains and losses from sales, are passed directly to the reinsurers through the contractual terms of the reinsurance arrangements. Offsetting these amounts in certain cases are corresponding changes in fair value of the embedded derivative liability associated with the underlying reinsurance arrangement. See Notes 1 and 9 for more information regarding our accounting for Modco.

Mortgage-Backed Securities (Included in AFS and Trading Securities)

Our fixed maturity securities include mortgage-backed securities ("MBS"). These securities are subject to risks associated with variable prepayments. This may result in differences between the actual cash flow and maturity of these securities than that expected at the time of purchase. Securities that have an amortized cost greater than par and are backed by mortgages that prepay faster than expected will incur a reduction in yield or a loss. Those securities with an amortized cost lower than par that prepay faster than expected will generate an increase in yield or a gain. In addition, we may incur reinvestment risks if market yields are lower than the book yields earned on the securities. Prepayments occurring slower than expected have the opposite effect. The degree to which a security is susceptible to either gains or losses is influenced by: the difference between its amortized cost and par; the relative sensitivity of the underlying mortgages backing the assets to prepayment in a changing interest rate environment; and the repayment priority of the securities in the overall securitization structure.

We limit the extent of our risk on MBS by prudently limiting exposure to the asset class, by generally avoiding the purchase of securities with a cost that significantly exceeds par, by purchasing securities with improving collateral performance, and by primarily investing in securities that are current pay and senior priority in their trust structure. A significant amount of assets in our MBS portfolio are either guaranteed by U.S. government-sponsored enterprises, supported in the securitization structure by junior securities, or purchased at discounted prices significantly lower than their expected recovery value, enabling the assets to achieve high investment grade status.

Our exposure to subprime mortgage lending is limited to investments in banks and other financial institutions that may be affected by subprime lending and direct investments in ABS and RMBS. Mortgage-related ABS are backed by home equity loans and RMBS are backed by residential mortgages. These securities are backed by loans that are characterized by borrowers of differing levels of creditworthiness: prime; Alt-A; and subprime. Prime lending is the origination of residential mortgage loans to customers with excellent credit profiles. Alt-A lending is the origination of residential mortgage loans to customers who have prime credit profiles but lack documentation to substantiate

income. Subprime lending is the origination of loans to customers with weak or impaired credit profiles.

Delinquency and loss rates on residential mortgages and home equity loans have been showing positive trends, and as long as the unemployment rate remains stable to improving, we expect these trends to continue. We continue to expect to receive payments in accordance with contractual terms for a significant amount of our securities, largely due to the seniority of the claims on the collateral of the securities that we own. The tranches of the securities will experience losses according to their seniority level with the least senior (or most junior), typically the unrated residual tranche, taking the first loss. Our ABS home equity and RMBS had a market value of \$5.0 billion and an unrealized gain of \$253 million, or 5%, as of December 31, 2014.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

The market value of AFS securities and trading securities backed by subprime loans was \$495 million and represented approximately 0.5% of our total investment portfolio as of December 31, 2014. AFS securities represented \$484 million, or 98%, and trading securities represented \$11 million, or 2%, of the subprime exposure as of December 31, 2014. The table below summarizes our investments in AFS securities backed by pools of residential mortgages (in millions) as of December 31, 2014:

- (1) Does not include the fair value of trading securities totaling \$4 million, which support our Modco reinsurance agreements because investment results for these agreements are passed directly to the reinsurers. The \$4 million in trading securities consisted of CMBS.
- (2) Does not include the amortized cost of trading securities totaling \$4 million, which support our Modco reinsurance agreements because investment results for these agreements are passed directly to the reinsurers. The \$4 million in trading securities consisted of CMBS.
- (3) Based upon the rating designations determined and provided by the major credit rating agencies (Fitch, Moody's and S&P). For securities where the ratings assigned by the major credit agencies are not equivalent, the second highest rating assigned is used. For those securities where ratings by the major credit rating agencies are not available, which does not represent a significant amount of our total fixed maturity AFS securities, we base the ratings disclosed upon internal ratings.

As of December 31, 2014, the amortized cost and fair value of our AFS exposure to Monoline insurers was \$495 million and \$542 million, respectively.

Composition by Industry Categories of our Unrealized Losses on AFS Securities

When considering unrealized gain and loss information, it is important to recognize that the information relates to the status of securities at a particular point in time and may not be indicative of the status of our investment portfolios subsequent to the balance sheet date. Further, because the timing of the recognition of realized investment gains and losses through the selection of which securities are sold is largely at management's discretion, it is important to consider the information provided below within the context of the overall unrealized gain or loss position of our investment portfolios. These are important considerations that should be included in any evaluation of the potential effect of unrealized loss securities on our future earnings.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

The composition by industry categories of all securities in unrealized loss position (in millions) as of December 31, 2014, was as follows:

	Fair Value	% Fair Value	Amortized Cost	% Amortized Cost	Gross Unrealized Losses and OTTI	% Gross Unrealized Losses and OTTI
Metals and mining	\$ 692	6.3%	\$ 769	6.7%	\$ 77	13.4%

2014	1,307	17.2%			
Total	\$ 7,573	100.0%			

The global financial markets and credit market conditions experienced a period of extreme volatility and disruption that began in the second half of 2007 and substantially increased throughout 2008 that led to a decrease in the overall liquidity and availability of capital in the mortgage loan market, and in particular a decrease in activity by securitization lenders. These conditions and the overall economic downturn put pressure on the fundamentals of mortgage loans through rising vacancies, falling rents and falling property values.

See Note 5 for information regarding our loan-to-value and debt-service coverage ratios and our allowance for loan losses.

As of December 31, 2014 and 2013, there were three impaired mortgage loans on real estate, or less than 1% of the total dollar amount of mortgage loans on real estate. The carrying value of the mortgage loans on real estate that were two or more payments delinquent as of December 31, 2014 and 2013, was \$8 million, or less than 1% of total mortgage loans on real estate. The total principal and interest past due on the mortgage loans on real estate that were two or more payments delinquent as of December 31, 2014 and 2013, was \$6 million and \$5 million, respectively. See Note 1 for more information regarding our accounting policy relating to the impairment of mortgage loans on real estate.

Alternative Investments

Investment income (loss) on alternative investments by business segment (in millions) was as follows:

Group Protection	10	7	7	43%	0%
Other Operations	1	1	2	0%	-50%
Total (1)	\$ 130	\$ 86	\$ 125	51%	-31%

(1) Includes net investment income on the alternative investments supporting the required statutory surplus of our insurance businesses.

As of December 31, 2014 and 2013, alternative investments included investments in 156 and 121 different partnerships, respectively, and the portfolio represented approximately 1% of our overall invested assets. The partnerships do not represent off-balance sheet financing and generally involve several third-party partners. Some of our partnerships contain capital calls, which require us to contribute capital upon notification by the general partner. These capital calls are contemplated during the initial investment decision and are planned for well in advance of the call date. The capital calls are not material in size and are not material to our liquidity. Alternative investments are accounted for using the equity method of accounting and are included in other investments on our Consolidated Balance Sheets.

Non-Income Producing Investments

As of December 31, 2014 and 2013, the carrying amount of fixed maturity securities, mortgage loans on real estate and real estate that were non-income producing was \$8 million and \$9 million, respectively.

85

Net Investment Income

Details underlying net investment income (in millions) and our investment yield were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Fixed maturity AFS securities	\$ 4,041	\$ 3,976	\$ 3,910	2%	2%
Equity AFS securities	9	6	6	50%	0%
Trading securities	125	137	147	-9%	-7%
Mortgage loans on real estate	378	388	397	-3%	-2%
Real estate	7	13	16	-46%	-19%
Policy loans	155	155	163	0%	-5%
Invested cash	2	3	4	-33%	-25%
Commercial mortgage loan prepayment and bond make-whole premiums (1)	138	117	48	18%	144%
Alternative investments (2)	130	86	125	51%	-31%
Consent fees	2	4	4	-50%	0%
Other investments	(11)	(9)	(19)	-22%	53%

	For the Years Ended December			Change Over	
	31, 2014	2013	2012	2014	2013
Average invested assets at amortized cost	\$ 92,215	\$ 89,251	\$ 85,285	3%	5%

We earn investment income on our general account assets supporting fixed annuity, term life, whole life, UL, interest-sensitive whole life and the fixed portion of retirement plan and VUL products. The profitability of our fixed annuity and life insurance products is affected by our ability to achieve target spreads, or margins, between the interest income earned on the general account assets and the interest credited to the contract holder on our average fixed account values, including the fixed portion of variable. Net investment income and the interest rate yield table each include commercial mortgage loan prepayments and bond make-whole premiums, alternative investments and contingent interest and standby real estate equity commitments. These items can vary significantly from period to period due to a number of factors and, therefore, can provide results that are not indicative of the underlying trends.

Commercial Mortgage Loan Prepayment and Bond Make-Whole Premiums

Prepayment and make-whole premiums are collected when borrowers elect to call or prepay their debt prior to the stated maturity. A prepayment or make-whole premium allows investors to attain the same yield as if the borrower made all scheduled interest payments until maturity. These premiums are designed to make investors indifferent to prepayment.

The increase in prepayment and make-whole premiums when comparing 2014 to 2013 was attributable primarily to increased refinancing activity.

Realized Gain (Loss) Related to Certain Investments

Details of the realized gain (loss) related to certain investments (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Fixed maturity AFS securities:					
Gross gains	\$ 29	\$ 21	\$ 16	38%	31%
Gross losses	(23)	(94)	(202)	76%	53%
Equity AFS securities:					
Gross gains	5	8	1	-38%	NM
Gross losses	-	(2)	(9)	100%	78%
Gain (loss) on other investments	3	(3)	2	200%	NM
Associated amortization of DAC, VOBA, DSI and DFEL and changes in other contract holder funds	(32)	(28)	2	-14%	NM
Total realized gain (loss) related to certain investments, pre-tax	\$ (18)	\$ (98)	\$ (190)	82%	48%

Amortization of DAC, VOBA, DSI and DFEL and changes in other contract holder funds reflect an assumption for an expected level of credit-related investment losses. When actual credit-related investment losses are realized, we recognize a true-up to our DAC, VOBA, DSI and DFEL amortization and changes in other contract holder funds within realized losses reflecting the incremental effect of actual versus expected credit-related investment losses. These actual to expected amortization adjustments could create volatility in net realized gains and losses. The write-down for impairments includes both credit-related and interest rate-related impairments.

Realized gains and losses generally originate from asset sales to reposition the portfolio or to respond to product experience. During 2014 and 2013, we sold securities for gains and losses. In the process of evaluating whether a security with an unrealized loss reflects declines that are other-than-temporary, we consider our ability and intent to sell the security prior to a recovery of value. However, subsequent decisions on securities sales are made within the context of overall risk monitoring, assessing value relative to other comparable securities and overall portfolio maintenance. Although our portfolio managers may, at a given point in time, believe that the preferred course of action is to hold securities with unrealized losses that are considered temporary until such losses are recovered, the dynamic nature of portfolio management may result in a subsequent decision to sell. These subsequent decisions are consistent with the classification of our investment portfolio as AFS. We expect to continue to manage all non-trading invested assets within our portfolios in a manner that is consistent with the AFS classification.

We consider economic factors and circumstances within countries and industries where recent write-downs have occurred in our assessment of the status of securities we own of similarly situated issuers. While it is possible for realized or unrealized losses on a particular investment to affect other investments, our risk management has been designed to identify correlation risks and other risks inherent in managing an investment portfolio. Once identified, strategies and procedures are developed to effectively monitor and manage these risks. The areas of risk correlation that we pay particular attention to are risks that may be correlated within specific financial and business markets, risks within specific industries and risks associated with related parties.

When the detailed analysis by our external asset managers and investment portfolio managers leads us to the conclusion that a security's decline in fair value is other-than-temporary, the security is written down to estimated recovery value. In instances where declines are considered temporary, the security will continue to be carefully monitored. See "Critical Accounting Policies and Estimates – Investments – Write-downs for OTTI and Allowance for Losses" for additional information on our portfolio management strategy.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Details underlying write-downs taken as a result of OTTI (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
OTTI Recognized in Net Income (Loss)					
Fixed maturity securities:					
Corporate bonds	\$ (1)	\$ (16)	\$ (27)	94%	41%
ABS	(10)	(20)	(40)	50%	50%
RMBS	(8)	(31)	(53)	74%	42%
CMBS	(1)	(15)	(55)	93%	73%
Total fixed maturity securities	(20)	(82)	(175)	76%	53%
Equity securities	-	(1)	(8)	100%	88%
Gross OTTI recognized in net income (loss)	(20)	(83)	(183)	76%	55%
Associated amortization of DAC, VOBA, DSI and DFEL	4	13	30	-69%	-57%
Net OTTI recognized in net income (loss), pre-tax	\$ (16)	\$ (70)	\$ (153)	77%	54%
Portion of OTTI Recognized in OCI					
Gross OTTI recognized in OCI	\$ 12	\$ 11	\$ 121	9%	-91%
Change in DAC, VOBA, DSI and DFEL	(2)	(1)	(15)	-100%	93%
Net portion of OTTI recognized in OCI, pre-tax	\$ 10	\$ 10	\$ 106	0%	-91%

The decrease in write-downs for OTTI when comparing 2014 to 2013 was primarily attributable to declines in write-downs on structured holdings. The improvements of the write-downs for OTTI on our RMBS and CMBS holdings were primarily attributable to a continued recovery in both residential and commercial real estate markets in 2014.

The \$32 million of impairments taken during 2014 were split between \$20 million of credit-related impairments and \$12 million of noncredit-related impairments. The credit-related impairments were largely attributable to our RMBS and CMBS holdings primarily as a result of weakness within select residential and commercial real estate securities. The noncredit-related impairments were due to declines in values of securities for which we do not have an intent to sell or it is not more likely than not that we will be required to sell the securities before recovery.

REINSURANCE

Our insurance companies cede insurance to other companies. The portion of our life insurance and annuity risks exceeding each of our insurance companies' retention limit is reinsured with other insurers. We seek reinsurance coverage to limit our exposure to mortality losses and/or to enhance our capital management. We acquire other reinsurance as applicable with retentions and limits that management believes are appropriate for the circumstances. The consolidated financial statements included in "Item 8. Financial Statements and Supplementary Data" reflect insurance premiums, insurance fees, benefits and DAC, net of insurance ceded. Our insurance companies remain liable if their reinsurers are unable to meet contractual obligations under applicable reinsurance agreements. We utilize inter-company reinsurance agreements to manage our statutory capital position as well as our hedge program for variable annuity guarantees. These inter-company agreements do not have an effect on our consolidated financial statements.

Our amounts recoverable from reinsurers represent receivables from and reserves ceded to reinsurers. The amounts recoverable from reinsurers were \$5.7 billion and \$6.0 billion as of December 31, 2014 and 2013, respectively. We focus on obtaining reinsurance from a diverse group of reinsurers. We regularly evaluate the financial condition of our reinsurers and monitor concentration risk with our largest reinsurers at least annually. We have established standards and criteria for our use and selection of reinsurers. In order for a new reinsurer to participate in our current program, we require the reinsurer to have an A.M. Best rating of A+ or greater or a S&P rating of AA- or better. If the reinsurer does not have these ratings, we generally require them to post collateral as described below; however, we may initially waive the collateral requirements based on the facts and circumstances. In addition, we may require collateral from a reinsurer to mitigate credit/collectability risk. Typically, in such cases, the reinsurer must either maintain minimum specified ratings and RBC ratios or establish the specified quality and quantity of collateral. Similarly, we have also required collateral in connection with books of business sold pursuant to indemnity reinsurance agreements.

Reinsurers, including affiliated reinsurers, that are not licensed, accredited or authorized in the state of domicile of the reinsured ("ceding company"), i.e., unauthorized reinsurers, are required to post statutorily prescribed forms of collateral for the ceding company to receive reinsurance credit. The three primary forms of collateral are: (i) qualifying assets held in a reserve credit trust; (ii) irrevocable, unconditional, evergreen LOCs issued by a qualified U.S. financial institution; and (iii) assets held by the ceding company in a segregated funds withheld account. Collateral must be maintained in accordance with the rules of the ceding company's state of domicile and must

be readily accessible by the ceding company to cover claims under the reinsurance agreement. Accordingly, our insurance subsidiaries require unauthorized reinsurers to post acceptable forms of collateral to support their reinsurance obligations to us.

As of December 31, 2014, approximately 76%, or \$4.3 billion, of our total reinsurance recoverable was secured by collateral for our benefit. Of this amount, \$3.5 billion was held by reinsurers for our benefit in reserve credit trusts (such reserve credit trusts are held by non-affiliated reinsurers; therefore, they are not reflected on our Consolidated Balance Sheets), \$764 million was reflected as funds withheld reinsurance liabilities on our Consolidated Balance Sheets and \$50 million was secured by LOCs for which we are the beneficiary, an off-balance sheet arrangement.

Swiss Re represents our largest reinsurance exposure. In 2001, we sold our reinsurance business to Swiss Re primarily through indemnity reinsurance arrangements. Because we are not relieved of our liability to the ceding companies for this business, the liabilities and obligations associated with the reinsured policies remain on our Consolidated Balance Sheets with a corresponding reinsurance receivable from Swiss Re, which totaled \$2.5 billion and \$2.6 billion as of December 31, 2014 and 2013, respectively. Swiss Re has funded a trust with a balance of \$2.6 billion as of December 31, 2014, to support this business. In addition to various remedies that we would have in the event of a default by Swiss Re, we continue to hold assets in support of certain of the transferred reserves. These assets consist of those reported as trading securities and certain mortgage loans. Our liability for funds withheld mentioned above related to the business sold to Swiss Re. In addition, our liability for embedded derivatives as of December 31, 2014, included \$128 million that is associated with the business sold to Swiss Re.

Portions of our deferred annuity business have been reinsured on a modified coinsurance basis with other companies to limit our exposure to interest rate risks. As of December 31, 2014, the reserves associated with these reinsurance arrangements totaled \$676 million.

We monitor all of our existing reinsurers' financial strength ratings on a monthly basis. We also monitor our reinsurers' financial health, trends and commitment to the reinsurance business, statutory surplus, RBC levels, statutory earnings and fluctuations, current claims payment aging and our reinsurers' own reinsurers. In addition, we present at least annually information regarding our reinsurance exposures to the Finance Committee of our Board of Directors. For more discussion of our counterparty risk with our reinsurers, see "Part I – Item 1A. Risk Factors – Operational Matters – We face risks of non-collectability of reinsurance and increased reinsurance rates, which could materially affect our results of operations."

See Note 9 and "Results of Life Insurance – Income (Loss) from Operations – Additional Information" for further information regarding reinsurance transactions.

For factors that could cause actual results to differ materially from those set forth in this section, see "Part I – Item 1A. Risk Factors" and "Forward-Looking Statements – Cautionary Language" above.

REVIEW OF CONSOLIDATED FINANCIAL CONDITION

Liquidity and Capital Resources

Sources of Liquidity and Cash Flow

Liquidity refers to the ability of an enterprise to generate adequate amounts of cash from its normal operations to meet cash requirements with a prudent margin of safety. Our principal sources of cash flow from operating activities are insurance premiums and fees and investment income, while sources of cash flows from investing activities result from maturities and sales of invested assets. Our operating activities provided cash of \$2.5 billion, \$799 million and \$1.3 billion in 2014, 2013 and 2012, respectively. When considering our liquidity and cash flow, it is important to distinguish between the needs of our insurance subsidiaries and the needs of the holding company, LNC. As a holding company with no operations of its own, LNC derives its cash primarily from its operating subsidiaries.

The sources of liquidity of the holding company are principally comprised of dividends and interest payments from subsidiaries, augmented by holding company short-term investments, bank lines of credit and the ongoing availability of long-term public financing under an SEC-filed shelf registration statement. These sources of liquidity and cash flow support the general corporate needs of the holding company, including its common stock dividends, interest and debt service, funding of callable securities, securities repurchases, acquisitions and investment in core businesses. Our cash flows associated with collateral received from and posted with counterparties change as the market value of the underlying derivative contract changes. As the value of a derivative asset declines (or increases), the collateral required to be posted by our counterparties would also decline (or increase). Likewise, when the value of a derivative liability declines (or increases), the collateral we are required to post to our counterparties would also decline (or increase). During 2014, our payables for collateral on derivative investments increased by \$1.0 billion due primarily to falling interest rates that increased the fair values of our associated derivative investments. In the event of adverse changes in fair value of our derivative instruments, we may need to post collateral with a counterparty if our net derivative liability position reaches certain contractual levels. If we do not have sufficient high quality securities or cash and invested cash to provide as collateral, we have multiple liquidity sources to leverage that would be eligible for collateral posting. For additional information, see “Credit Risk” in Note 6.

Details underlying the primary sources of our holding company cash flows (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Dividends from Subsidiaries					
LNL	\$ 705	\$ 640	\$ 605	10%	6%
First Penn-Pacific	80	85	30	-6%	183%
Lincoln Reinsurance Company of Bermuda, Limited	6	-	-	NM	NM
Loan Repayments and Interest from Subsidiaries					
Interest on inter-company notes	126	125	147	1%	-15%
	\$ 917	\$ 850	\$ 782	8%	9%
Other Cash Flow and Liquidity Items					
Net capital received from (paid for taxes on) stock options exercises and restricted stock	\$ 29	\$ 32	\$ (5)	-9%	NM

The table above focuses on significant and recurring cash flow items and excludes the effects of certain financing activities, namely the periodic issuance and retirement of debt and cash flows related to our inter-company cash management program (discussed below). Taxes have been eliminated from the analysis due to a tax sharing agreement among our primary subsidiaries resulting in a modest effect on net cash flows at the holding company. Also excluded from this analysis is the modest amount of investment income on short-term investments of the holding company. See “Part IV – Item 15(a)(2) Financial Statement Schedules – Schedule II – Condensed Financial Information of Registrant” for the parent company cash flow statement.

Dividends from Subsidiaries

Our insurance subsidiaries are subject to certain insurance department regulatory restrictions as to the transfer of funds and payment of dividends to the holding company. Under Indiana laws and regulations, our Indiana insurance subsidiaries, including our primary insurance subsidiary, LNL, may pay dividends to LNC without prior approval of the Indiana Insurance Commissioner (the “Commissioner”) only from unassigned surplus or must receive prior approval of the Commissioner to pay a dividend if such dividend, along with all other dividends paid within the preceding 12 consecutive months, would exceed the statutory limitation. The current statutory limitation is the greater of 10% of the insurer’s contract holders’ surplus, as shown on its last annual statement on file with the Commissioner or the insurer’s statutory net gain from operations for the previous 12 months, but in no event to exceed statutory unassigned surplus. Indiana law gives the Commissioner broad discretion to disapprove requests for dividends in excess of these limits. LNL’s subsidiary, LLANY, a New York-domiciled insurance company, has similar restrictions, except that in New York it is the lesser of 10% of surplus to contract holders as of the immediately preceding calendar year or net gain from operations for the immediately preceding calendar year, not including realized capital gains.

We expect our domestic insurance subsidiaries could pay dividends of approximately \$1.3 billion in 2015 without prior approval from the respective state commissioners. The amount of surplus that our insurance subsidiaries could pay as dividends is constrained by the amount of surplus we hold to maintain our ratings, to provide an additional layer of margin for risk protection and for future investment in our businesses.

We maintain an investment portfolio of various holdings, types and maturities. These investments are subject to general credit, liquidity, market and interest rate risks. An extended disruption in the credit and capital markets could adversely affect LNC and its subsidiaries' ability to access sources of liquidity, and there can be no assurance that additional financing will be available to us on favorable terms, or at all, in the current market environment. In addition, further OTTI could reduce our statutory surplus, leading to lower RBC ratios and potentially reducing future dividend capacity from our insurance subsidiaries.

Subsidiaries' Statutory Reserving and Surplus

The RBC ratio is an important factor in the determination of the credit and financial strength ratings of LNC and its subsidiaries, as a reduction in our insurance subsidiaries' surplus may affect their RBC ratios and dividend-paying capacity. For a discussion of RBC ratios, see "Part I – Item 1. Business – Regulatory – Insurance Regulation – Risk-Based Capital."

Like other life insurers, we utilize inter-company reinsurance arrangements with captives primarily to manage risk and statutory capital. Captive reinsurers are typically special purpose vehicles that either by statute or by restriction in their licensing orders are limited to reinsuring business from insurance affiliates. Specifically, captives help us mitigate the capital impact of XXX and AG38 reserving guidelines. XXX and AG38 require insurers to use reserving assumptions that result in statutory reserves greater than what we expect to need to adequately support term life insurance policies and UL policies with secondary guarantees. The captive reinsurance structures we use provide a mechanism for the financing of a portion of the excess reserve amounts in a more efficient manner. This, in turn, frees up capital that the insurance subsidiaries can use for any number of purposes, including for paying dividends to the holding company. Once transferred to the holding company, it can deploy this capital for a variety of corporate purposes, including potentially for stock repurchases.

Currently, insurance companies are using a wide variety of captive reinsurance structures to support their respective businesses. The NAIC through its various committees, task forces and working groups has been studying the use of captives and special purpose vehicles to transfer insurance risk and has been evaluating the adequacy of existing NAIC model laws and regulations applicable to captives. Recently, the NAIC adopted AG48 regulating the terms of captive reinsurance arrangements that are entered into or amended in certain ways after December 31, 2014. AG48 imposes restrictions on the types of assets that can be used to support these arrangements. We believe that we will be able to implement these arrangements in compliance with the new requirements.

Statutory reserves established for variable annuity contracts and riders are sensitive to changes in the equity markets and are affected by the level of account values relative to the level of any guarantees, product design and reinsurance arrangements. As a result, the relationship between reserve changes and equity market performance is non-linear during any given reporting period. Market conditions greatly influence the ultimate capital required due to its effect on the valuation of reserves and derivative assets hedging these reserves.

Changes in equity markets may also affect the capital position of our insurance subsidiaries. We may decide to reallocate available capital among our insurance subsidiaries, including our captive reinsurers, which would result in different RBC ratios for our insurance subsidiaries. In addition, changes in the equity markets can affect the value of our variable annuity separate accounts. When the market value of our separate account assets increases, the statutory surplus within our insurance subsidiaries also increases. Contrarily, when the market value of our separate account assets decreases, the statutory surplus within our insurance subsidiaries may also decrease, which may affect RBC ratios, and in the case of our separate account assets becoming less than the related product liabilities, we must allocate additional capital to fund the difference.

We continue to analyze the use of existing captive reinsurance structures, as well as additional third-party reinsurance arrangements, and our current hedging strategies relative to managing the effects of equity markets and interest rates on the statutory reserves, statutory capital and the dividend capacity of our life insurance subsidiaries.

For more discussion of our strategies to lessen the burden of increased XXX and AG38 statutory reserves associated with term products and UL products containing secondary guarantees on our insurance subsidiaries, see “Results of Life Insurance – Income (Loss) from Operations – Strategies to Address Statutory Reserve Strain.”

Financing Activities

Although our subsidiaries currently generate adequate cash flow to meet the needs of our normal operations, periodically we may issue debt or equity securities to maintain ratings and increase liquidity, as well as to fund internal growth, acquisitions and the retirement of our debt and equity securities.

We currently have an effective shelf registration statement, which allows us to issue, in unlimited amounts, securities, including debt securities, preferred stock, common stock, warrants, stock purchase contracts, stock purchase units and depository shares.

Details underlying debt and financing activities (in millions) for the year ended December 31, 2014, were as follows:

	Beginning		Maturities, Repayments and	Change in Fair Value	Other Changes	Ending
	Balance	Issuance	Refinancing	Hedges	(1)	Balance
Short-Term Debt						
Current maturities of long-term debt (2)	\$ 501	\$ -	\$ (500)	\$ -	\$ 249	\$ 250
Long-Term Debt						
Senior notes	\$ 3,609	\$ -	\$ -	\$ 199	\$ (250)	\$ 3,558
Bank borrowing	250	-	-	-	-	250
Federal Home Loan Bank of Indianapolis advance	250	-	-	-	-	250
Capital securities	1,211	-	-	-	1	1,212
Total long-term debt	\$ 5,320	\$ -	\$ -	\$ 199	\$ (249)	\$ 5,270

(1) Includes the net increase (decrease) in commercial paper, non-cash reclassification of long-term debt to current maturities of long-term debt, accretion of discounts and (amortization) of premiums, as applicable.

(2) As of December 31, 2014, consisted of a \$250 million 4.30% fixed-rate senior note maturing on June 15, 2015.

During the first quarter of 2014, we repaid a \$300 million 4.75% fixed-rate senior note that matured on January 30, 2014, and a \$200 million 4.75% fixed-rate senior note that matured on February 15, 2014. Although the specific resources or combination of resources that we will use to meet the June 2015 maturity mentioned above will depend upon, among other things, capital market conditions, we expect to refinance the maturity. As of December 31, 2014, the holding company had available liquidity of \$554 million. Available liquidity consists of cash and invested cash, excluding cash held as collateral, and certain short-term investments that can be readily converted into cash, net of commercial paper outstanding.

For information about our short-term and long-term debt and our credit facilities and LOCs, see Note 12.

We have not accounted for repurchase agreements, securities lending transactions, or other transactions involving the transfer of financial assets with an obligation to repurchase the transferred assets as sales and do not have any other transactions involving the transfer of financial assets with an obligation to repurchase the transferred assets. For information about our collateralized financing transactions on our investments, see “Payables for Collateral on Investments” in Note 5.

If current credit ratings and claims-paying ratings were downgraded in the future, terms in our derivative agreements may be triggered, which could negatively affect overall liquidity. For the majority of our counterparties, there is a termination event should the long-term senior debt ratings of LNC drop below BBB-/Baa3 (S&P/Moody’s). Our long-term senior debt held a rating of A-/Baa1 (S&P/Moody’s) as of December 31, 2014. In addition, contractual selling agreements with intermediaries could be negatively affected, which could have an adverse effect on overall sales of annuities, life insurance and investment products. See “Part I – Item 1A. Risk Factors – Liquidity and Capital Position – A decrease in the capital and surplus of our insurance subsidiaries may result in a downgrade to our credit and insurer financial strength ratings” and “Part I – Item 1A. Risk Factors – Covenants and Ratings – A downgrade in our financial strength or credit ratings could limit our ability to market products, increase the number or value of policies being surrendered and/or hurt our relationships with creditors” for more information. See “Part I – Item 1. Business – Financial Strength Ratings” for additional information on our current financial strength ratings.

Our indicative credit ratings published by the primary rating agencies are set forth below. Securities are rated at the time of issuance so actual ratings may differ from the indicative ratings. There may be other rating agencies that also provide credit ratings, which we do not disclose in our reports.

The long-term credit rating scales of A.M. Best, Fitch, Moody’s and S&P are characterized as follows:

- A.M. Best – aaa to d
- Fitch – AAA to D
- Moody’s – Aaa to C
- S&P – AAA to D

As of February 18, 2015, our indicative long-term credit ratings as published by the principal rating agencies that rate our long-term credit were as follows:

A.M. Best	Fitch	Moody's	S&P
a-	BBB+	Baa1	A-
(7th of 22)	(8th of 21)	(8th of 21)	(7th of 22)

The short-term credit rating scales of A.M. Best, Fitch, Moody's and S&P are characterized as follows:

- A.M. Best – AMB-1+ to d
- Fitch – F1+ to D
- Moody's – P-1 to NP
- S&P – A-1 to D

As of February 18, 2015, our indicative short-term credit ratings as published by the principal rating agencies that rate our short-term credit were as follows:

A.M. Best	Fitch	Moody's	S&P
AMB-1	F2	P-2	A-2
(2nd of 6)	(3rd of 8)	(2nd of 4)	(2nd of 9)

A downgrade of our debt ratings could affect our ability to raise additional debt with terms and conditions similar to our current debt, and accordingly, likely increase our cost of capital. In addition, a downgrade of these ratings could make it more difficult to raise capital to refinance any maturing debt obligations, to support business growth at our insurance subsidiaries and to maintain or improve the current financial strength ratings of our principal insurance subsidiaries described in "Part I – Item 1. Business – Financial Strength Ratings."

All ratings are on outlook stable. All of our ratings are subject to revision or withdrawal at any time by the rating agencies, and therefore, no assurance can be given that we can maintain these ratings. Each rating should be evaluated independently of any other rating.

Management monitors the covenants associated with LNC's capital securities. If we fail to meet capital adequacy or net income and stockholders' equity levels (also referred to as "trigger events"), terms in the agreements may be triggered, which would require us to make interest payments in accordance with an alternative coupon satisfaction mechanism ("ACSM"). This would require us to use commercially reasonable efforts to pay interest in full on the capital securities with the net proceeds from sales of our common stock and warrants to purchase our common stock with an exercise price greater than the market price. We would have to utilize the ACSM until the trigger events above no longer existed. If we were required to utilize the ACSM and were successful in selling sufficient shares of common stock or warrants to satisfy the interest payment, we would dilute the current holders of our common stock. Furthermore, while a trigger event is occurring and if we do not pay accrued interest in full, we may not, among other things, pay dividends on or repurchase our capital stock. We have not triggered either the net income test or the overall stockholders' equity test looking forward to the quarters ending March 31, 2015, and June 30, 2015. For more information, see "Part I – Item 1A. Risk Factors – Covenants and Ratings – We will be required to pay interest on our capital securities with proceeds from the issuance of qualifying securities if we fail to achieve capital adequacy or net income and stockholders' equity levels."

Alternative Sources of Liquidity

In order to manage our capital more efficiently, we have an inter-company cash management program where certain subsidiaries can lend to or borrow from the holding company to meet short-term borrowing needs. The cash management program is essentially a series of demand loans between LNC and participating subsidiaries that reduces overall borrowing costs by allowing LNC and its subsidiaries to access internal resources instead of incurring third-party transaction costs. As of December 31, 2014, the holding company had a net outstanding payable of \$16 million to certain subsidiaries resulting from amounts placed by the subsidiaries in the inter-company cash management account in excess of funds borrowed by those subsidiaries as of December 31, 2014. Any change in holding company cash management program balances is offset by the immediate and equal change in holding company cash and invested cash. Loans under the cash management program are permitted under applicable insurance laws subject to certain restrictions. For our Indiana-domiciled insurance subsidiaries, the borrowing and lending limit is currently 3% of the insurance company's admitted assets as of its most recent year end. For our New York-domiciled insurance subsidiary, it may borrow from LNC less than 2% of its admitted assets as of the last year end but may not lend any amounts to LNC.

Our insurance subsidiaries, by virtue of their general account fixed-income investment holdings, can access liquidity through securities lending programs and repurchase agreements. As of December 31, 2014, our insurance subsidiaries had investments with a carrying value of \$2.7 billion out on loan or subject to repurchase agreements. The cash received in our securities lending programs and repurchase agreements is typically invested in cash equivalents, short-term investments or fixed maturity securities. For additional details, see "Payables for Collateral on Investments" in Note 5.

For factors that could cause actual results to differ materially from those set forth in this section, see “Part I – Item 1A. Risk Factors” and “Forward-Looking Statements – Cautionary Language” above.

Divestitures

For a discussion of our divestitures, see Note 3.

Uses of Capital

Our principal uses of cash are to pay policy claims and benefits, operating expenses, commissions and taxes, to purchase new investments, to purchase reinsurance, to fund policy surrenders and withdrawals, to pay dividends to our stockholders and to repurchase our stock and debt securities.

Return of Capital to Common Stockholders

One of the Company’s primary goals is to provide a return to our common stockholders through share price accretion, dividends and stock repurchases. In determining dividends, the Board of Directors takes into consideration items such as current and expected earnings, capital needs, rating agency considerations and requirements for financial flexibility. The amount and timing of share repurchase depends on key capital ratios, rating agency expectations, the generation of free cash flow and an evaluation of the costs and benefits associated with alternative uses of capital. Free cash flow for the holding company generally represents the amount of dividends and interest received from subsidiaries less interest paid on debt.

Details underlying this activity (in millions, except per share data), were as follows:

	For the Years Ended December			Change Over	
	31,			Prior Year	
	2014	2013	2012	2014	2013
Common dividends to stockholders	\$ 168	\$ 128	\$ 90	31%	42%
Repurchase of common stock	650	450	492	44%	-9%
Total cash returned to stockholders	\$ 818	\$ 578	\$ 582	42%	-1%
Number of shares repurchased	12.472	11.981	20.467	0%	-40%
Average price per share	\$ 52.14	\$ 37.58	\$ 24.07	37%	58%

On October 29, 2014, our Board of Directors approved an increase of the quarterly dividend on our common stock from \$0.16 to \$0.20 per share. Additionally, we expect to repurchase additional shares of common stock during 2015 depending on market conditions and alternative uses of capital. For more information regarding share repurchases, see “Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities – (c) Issuer Purchases of Equity Securities” above.

Other Uses of Capital

In addition to the amounts in the table above in “Return of Capital to Common Stockholders,” other uses of holding company cash flow (in millions) were as follows:

	For the Years Ended			Change Over	
	December 31,			Prior Year	
	2014	2013	2012	2014	2013
Debt service (interest paid)	\$ 296	\$ 289	\$ 298	2%	-3%
Capital contribution to subsidiaries	5	75	-	-93%	NM
Total	\$ 301	\$ 364	\$ 298	-17%	22%

The above table focuses on significant and recurring cash flow items and excludes the effects of certain financing activities, namely the periodic retirement of debt and cash flows related to our inter-company cash management account. Taxes have been eliminated from the analysis due to a tax sharing agreement among our primary

subsidiaries resulting in a modest effect on net cash flows at the holding company.

94

Contractual Obligations

Details underlying our future estimated cash payments for our contractual obligations (in millions) as of December 31, 2014, were as follows:

	Less Than 1 Year	1 - 3 Years	3 - 5 Years	More Than 5 Years	Total
Future contract benefits and other contract holder obligations (1)	\$ 17,936	\$ 32,557	\$ 27,083	\$ 93,460	\$ 171,036
Short-term debt (2)	250	-	-	-	250
Long-term debt (2)	-	250	937	3,836	5,023
Reserve financing and LOC expenses (3)	68	140	140	582	930
Payables for collateral on investments (4)	2,380	250	-	-	2,630
Operating leases (5)	44	74	44	19	181
Capital leases (5)	1	3	86	-	90
Football stadium naming rights (6)	7	15	15	24	61
Retirement and other plans (7)	129	222	217	523	1,091
Total	\$ 20,815	\$ 33,511	\$ 28,522	\$ 98,444	\$ 181,292

- (1) Estimates are based on financial projections of over 40 years. New business issued, changes to or variance from actuarial assumptions and economic conditions will cause these amounts to change over time, possibly materially. See Note 1 for details of what these liabilities include and represent.
- (2) Represents principal amounts of debt only. See Note 12 for additional information.
- (3) Estimates are based on the level of capacity we expect to utilize during the life of the LOCs and other reserve financing arrangements. See Note 12 for additional information.
- (4) Excludes collateral payable held for derivative investments. See Note 5 for additional information.
- (5) See Note 13 for additional information.
- (6) Includes a maximum annual increase related to the Consumer Price Index. See Note 13 for additional information.
- (7) Includes anticipated funding for benefit payments for our retirement and postretirement plans through 2024 and known payments under deferred compensation arrangements. See Note 17 for additional information.

In addition to the contractual commitments outlined in the table above, we periodically fund the employees' defined benefit plans, discussed in "Defined Benefit Contributions" below.

Due to the uncertainty with respect to the timing of future cash flows associated with our unrecognized tax benefits as of December 31, 2014, we are unable to make reasonably reliable estimates of the period of cash settlement with the

respective taxing authority. Therefore, \$17 million of unrecognized tax benefits and its associated interest have been excluded from the contractual obligations table above. See Note 7 for additional information.

Contingencies and Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that are reasonably likely to have a material effect on our financial condition, results of operations, liquidity or capital resources. Details underlying our contingent commitments and off-balance sheet arrangements (in millions) as of December 31, 2014, were as follows:

	Amount of Commitment Expiring per Period				Total Amount Committed
	Less Than 1 Year	1 - 3 Years	3 - 5 Years	After 5 Years	
Bank lines of credit	\$ -	\$ -	\$ 2,850	\$ 2,893	\$ 5,743
Investment commitments	856	190	183	147	1,376
Media commitments (1)	19	6	-	-	25
Total	\$ 875	\$ 196	\$ 3,033	\$ 3,040	\$ 7,144

(1) Consists primarily of employment contracts, sports rights fees and rating service contracts.

Defined Benefit Contributions

We contributed \$7 million, \$6 million and \$32 million in 2014, 2013 and 2012, respectively, to U.S. pension plans; \$6 million, \$6 million and \$7 million in 2014, 2013 and 2012, respectively, to our U.K. pension plan; and \$12 million, \$13 million and \$15 million in 2014, 2013 and 2012, respectively, to our postretirement plans that provide medical, dental and life insurance benefits. Our U.S. defined benefit pension plans were frozen as of December 31, 2007, or earlier; and our non-U.S. defined benefit pension plan was frozen as of September 30, 2009. For our frozen plans, there are no new participants and no future accruals of benefits from the date of the freeze.

Based on our calculations, we expect to be required to make a \$2 million contribution related to administrative expenses to our qualified pension plans in 2015 under applicable pension law. In addition, we analyze and review opportunities to make contributions in excess of those required under applicable pension law. Such excess contributions will be made from time to time if, based on our analysis, we believe that the excess contributions serve the best interests of both the Company and of plan participants.

We expect to fund \$12 million to our nonqualified U.S. defined benefit plans and \$9 million to our postretirement benefit plans during 2015. These amounts include anticipated benefit payments for nonqualified plans.

The majority of contributions and benefit payments are made by our insurance subsidiaries with little affect on holding company cash flow. See Note 17 for additional information.

Significant Trends in Sources and Uses of Cash Flow

As stated above, LNC's cash flow, as a holding company, is largely dependent upon the dividend capacity of its insurance company subsidiaries as well as their ability to advance funds to it through inter-company borrowing arrangements, which may be affected by factors influencing the insurance subsidiaries' RBC and statutory earnings performance. We currently expect to be able to meet the holding company's ongoing cash needs and to have sufficient capital to offer downside protection in the event that the capital and credit markets experience another period of extreme volatility and disruption. A decline in capital market conditions, which reduces our insurance subsidiaries' statutory surplus and RBC, may require them to retain more capital and may pressure our subsidiaries' dividends to the holding company, which may lead us to take steps to preserve or raise additional capital. For factors that could affect our expectations for liquidity and capital, see "Part I – Item 1A. Risk Factors."

OTHER MATTERS

Other Factors Affecting Our Business

In general, our businesses are subject to a changing social, economic, legal, legislative and regulatory environment. Some of the changes include initiatives to require more reserves to be carried by our insurance subsidiaries. Although the eventual effect on us of the changing environment in which we operate remains uncertain, these factors and others could have a material effect on our results of operations, liquidity and capital resources. For factors that could cause actual results to differ materially from those set forth in this section, see "Part I – Item 1A. Risk Factors" and "Forward-Looking Statements – Cautionary Language" above.

Recent Accounting Pronouncements

See Note 2 for a discussion of recent accounting pronouncements that have been implemented during the periods presented or that have been issued and are to be implemented in the future.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

We analyze and manage the risks arising from market exposures of financial instruments, as well as other risks, in an integrated asset-liability management process that considers diversification. By aggregating the potential effect of market and other risks on the entire enterprise, we estimate, review and in some cases manage the risk to our earnings and shareholder value. We have exposures to several market risks including interest rate risk, equity market risk, default risk, credit risk and, to a lesser extent, foreign currency exchange risk. The exposures of financial instruments to market risks, and the related risk management processes, are most important to our business where most of the invested assets support accumulation and investment-oriented insurance products. As an important element of our integrated asset-liability management processes, we use derivatives to minimize the effects of changes in interest levels, the shape of the yield curve, currency movements and volatility. In this context, derivatives serve to minimize interest rate risk by mitigating the effect of significant increases in interest rates on our earnings. Additional market exposures exist in our other general account insurance products and in our debt structure and derivatives positions. Our primary sources of market risk are substantial, relatively rapid and sustained increases or decreases in interest rates or a sharp drop in equity market values. These market risks are discussed in detail in the following pages and should be read in conjunction with our consolidated financial statements and the accompanying notes to the consolidated financial statements (“Notes”) presented in “Item 8. Financial Statements and Supplementary Data,” as well as “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” (“MD&A”).

Interest Rate Risk

With respect to accumulation and investment-oriented products, we seek to earn a stable and profitable spread, or margin, between investment income we earn on our invested assets and interest credited to account values of our contract holders. If we have adverse experience on investments that cannot be passed on to customers, our spreads are reduced. We are seeing spread compression abate, as the difference between our new money yield and our fixed income portfolio yield has narrowed. The combination of a probable range of interest rate changes over the next 12 months, asset-liability management strategies, flexibility in adjusting policy crediting rate levels and protection afforded by policy surrender charges all work together to mitigate this risk. The interest rate scenarios of concern are those in which there is a substantial, relatively prolonged decrease in interest rates that is sustained over a long period or a rapid increase in interest rates.

Significant Interest Rate Exposures

The following provides a general measure of our significant interest rate risk; amounts are shown by year of maturity and include amortization of premiums and discounts; interest rate cap agreements notional amounts are shown by amount outstanding (dollars in millions) as of December 31, 2014:

	2015	2016	2017	2018	2019	Thereafter	Total	Estimated Fair Value
Rate Sensitive Assets								
Fixed interest rate securities	\$ 2,352	\$ 2,838	\$ 3,434	\$ 4,512	\$ 6,161	\$ 57,293	\$ 76,590	\$ 84,741
Average interest rate	5.3%	5.3%	5.1%	5.3%	5.5%	5.0%	5.1%	
Variable interest rate securities	\$ 63	\$ 90	\$ 201	\$ 456	\$ 477	\$ 3,392	\$ 4,679	\$ 4,162

- (1) The information shown is for our fixed maturity securities and mortgage loans on real estate that support these insurance contracts.
- (2) The indexes are the 7-year and 10-year constant maturity swap.
- (3) The Constant Maturity Treasury (“CMT”) curve is the 7-year and 10-year CMT forward curve.

The following provides the principal amounts and estimated fair values of assets, liabilities and derivatives (in millions) having significant interest rate risks as of December 31, 2013:

	Principal Amount	Estimated Fair Value
Fixed interest rate securities	\$ 74,904	\$ 79,221
Variable interest rate securities	4,436	3,836
Mortgage loans on real estate	7,207	7,386
Investment type insurance contracts (1)	29,736	31,188
Debt	5,773	6,262
Interest rate and foreign currency swaps	17,559	(172)
Interest rate cap agreements	28,175	41
Interest rate futures	3,180	-

(1) The information shown is for our fixed maturity securities and mortgage loans on real estate that support these insurance contracts.

Effect of Interest Rate Sensitivity

The following table presents our estimate of the effect on income (loss) from operations by segment (in millions) for the next 12-month period if the level of interest rates were to instantaneously increase or decrease by 1% and remain at those levels immediately after December 31, 2014:

	1% Increase	1% Decrease
Annuities (1)	\$ (10)	\$ 1
Retirement Plan Services	2	(12)
Life Insurance	(1)	(9)
Group Protection	1	(1)
Other Operations	2	(2)
Income (loss) from operations	\$ (6)	\$ (23)

(1) Includes the impact on bond funds in our separate accounts, which move in the opposite direction of interest rates.

For purposes of this estimate, we exclude any effect related to sales, unlocking, persistency, hedge program performance or customer behavior caused by the interest rate change.

Interest Rate Risk on Fixed Insurance Businesses – Falling Rates

In periods of declining interest rates, we have to reinvest the cash we receive as interest or return of principal on our investments in lower yielding instruments. Moreover, borrowers may prepay fixed-income securities, commercial mortgages and mortgage-backed securities in our general accounts in order to borrow at lower market rates, which exacerbates this risk. Because we are entitled to reset the interest rates on our fixed-rate annuities only at limited, pre-established intervals, and because many of our contracts have guaranteed minimum interest or crediting rates, our spreads could decrease and potentially become negative.

Prolonged historically low rates are not healthy for our business fundamentals. However, we have recognized this risk and have been proactive in our investment strategies, product designs, crediting rate strategies and overall asset-liability practices to mitigate the risk of unfavorable consequences in this type of environment. For some time now, new products have been sold with low minimum crediting floors, and we apply disciplined asset-liability management standards, such as locking in spreads on these products at the time of issue. See “Part I – Item 1A. Risk Factors – Market Conditions – Changes in interest rates and sustained low interest rates may cause interest rate spreads to decrease and changes in interest rates may also result in increased contract withdrawals” for additional information on interest rates.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

The following provides detail on the percentage differences between the December 31, 2014, interest rates being credited to contract holders based on the fourth quarter of 2014 declared rates and the respective minimum guaranteed policy rate (in millions), broken out by contract holder account values reported within our segments:

	Account Values			Total	% Account Values
	Annuities	Retirement Plan Services	Life Insurance (1)		
Excess of Crediting Rates over Contract Minimums					
Discretionary rate setting products: (2)					
Occurring within the next twelve months: (3)					
No difference	\$ 8,575	\$ 9,796	\$ 31,666	\$ 50,037	70.5%
Up to 0.50%	1,588	450	473	2,511	3.5%
0.51% to 1.00%	1,243	154	17	1,414	2.0%
1.01% to 1.50%	882	15	117	1,014	1.4%
1.51% to 2.00%	739	-	520	1,259	1.8%
2.01% to 2.50%	810	-	-	810	1.2%
2.51% to 3.00%	230	-	-	230	0.3%
3.01% or greater	67	-	-	67	0.1%
Occurring after the next twelve months (4)	5,602	-	-	5,602	7.9%
Total discretionary rate setting products	19,736	10,415	32,793	62,944	88.7%
Other contracts (5)	2,184	5,814	-	7,998	11.3%
Total account values	\$ 21,920	\$ 16,229	\$ 32,793	\$ 70,942	100.0%
Percentage of discretionary rate setting product account values at minimum guaranteed rates	43.4%	94.1%	96.6%	79.5%	

(1) Excludes policy loans.

(2) Contracts currently within new money rate bands are grouped according to the corresponding portfolio rate band in which they will fall upon their first anniversary.

(3) The average crediting rates were 46 basis points, 2 basis points and 4 basis points in excess of average minimum guaranteed rates for our Annuities, Retirement Plan Services and Life Insurance segments, respectively.

(4) The average crediting rates were 110 basis points in excess of average minimum guaranteed rates. Of our account values for these products, 29% are scheduled to reset in more than one year but not more than two years; 24% are scheduled to reset in more than two years but not more than three years; and 47% are scheduled to reset in more than three years.

(5) For Annuities, this amount relates primarily to income annuity and short-term dollar cost averaging business. For Retirement Plan Services, this amount relates primarily to indexed-based rate setting products in which the average crediting rates were 8 basis points in excess of average minimum guaranteed rates, and 82% of account values were already at their minimum guaranteed rates.

The maturity structure and call provisions of the related portfolios are structured to afford protection against erosion of investment portfolio yields during periods of declining interest rates. We devote extensive effort to evaluating the risks associated with falling interest rates by simulating asset and liability cash flows for a wide range of interest rate scenarios. We seek to manage these exposures by maintaining a suitable maturity structure and by limiting our exposure to call risk in each respective investment portfolio.

Interest Rate Risk on Fixed Insurance Businesses – Rising Rates

For both annuities and universal life insurance, a rapid rise in interest rates poses risks of deteriorating spreads and high surrenders. The portfolios supporting these products have fixed-rate assets laddered over maturities generally ranging from 1 to 10 years or more. Accordingly, the earned rate on each portfolio lags behind changes in market yields. As rates rise, the lag may be increased by slowing mortgage-backed securities prepayments. The greater and faster the rise in interest rates, the more the earned rate will tend to lag behind market rates. If we set renewal crediting rates to earn the desired spread, the gap between our renewal crediting rates and competitors' new money rates may be wide enough to cause increased surrenders that could cause us to liquidate a portion of our portfolio to fund these surrenders. If we credit more competitive renewal rates to limit surrenders, our spreads will narrow. We devote extensive effort to evaluating these risks by simulating asset and liability cash flows for a wide range of interest rate scenarios. Such analysis has led to adjustments in the target maturity structure and to hedging the risk of rising rates by entering into interest rate cap corridor agreements. With these instruments in place, the potential adverse effect of a rapid and sustained rise in rates is kept within our risk tolerances.

Debt

We manage the timing of maturities and the mixture of fixed-rate and floating-rate debt as part of the process of integrated management of interest rate risk for the entire enterprise. See Note 12 for additional information on our debt.

Derivatives

See Note 6 for information on our derivatives used to hedge our exposure to changes in interest rates.

Equity Market Risk

Our revenues, assets and liabilities are exposed to equity market risk that we often hedge with derivatives. Due to the use of our reversion to the mean (“RTM”) process and our hedging strategies, we expect that, in general, short-term fluctuations in the equity markets should not have a significant effect on our quarterly earnings from unlocking of assumptions for deferred acquisition costs, value of business acquired, deferred sales inducements and deferred front-end loads. However, earnings are affected by equity market movements on account values and assets under management and the related fees we earn on those assets. Refer to “Critical Accounting Policies and Estimates – DAC, VOBA, DSI and DFEL” in the MD&A for further discussion of the effects of equity markets on our RTM.

Fee Income

The fees earned from variable annuities and variable life insurance products are exposed to the risk of a decline in equity market values. These fees are generally a fixed percentage of the market value of assets under management. In a severe equity market decline, fee income could be reduced by not only reduced market valuations but also by customer withdrawals and redemptions. Such withdrawals and redemptions from equity funds and accounts might be partially offset by transfers to our fixed-income accounts and the transfer of funds to us from our competitors’ customers.

Assets

While we invest in equity assets with the expectation of achieving higher returns than would be available in our core fixed-income investments, the returns on and values of these equity investments are subject to somewhat greater market risk than our fixed-income investments. These investments, however, add diversification benefits to our fixed-income investments. The following provides the sensitivity of price changes (in millions) to our equity assets owned and equity derivatives:

	As of December 31, 2014				As of December 31, 2013	
	Carrying Value	Estimated Fair Value	10% Fair	10% Fair	Carrying Value	Estimated Fair Value
			Value Increase	Value Decrease

Put options	8,104	286	(85)	111	8,004	406
Call options (based on S&P 500)	6,910	376	102	(70)	6,255	393
Total	\$ 17,361	\$ 662	\$ (155)	\$ 213	\$ 17,427	\$ 758

(1) Assumes a plus or minus 10% change in underlying indexes. Estimated fair value does not reflect daily settlement of futures or monthly settlement of total return swaps.

Liabilities

We have exposure to changes in our stock price through stock appreciation rights (“SARs”) issued in 2010 through 2014. See Notes 6 and 19 for additional information on our SARs and the related call options used to hedge the expected increase in liabilities from SARs granted on our stock.

Derivatives Hedging Equity Market Risk

We have entered into derivative transactions to hedge our exposure to equity market fluctuations. Such derivatives include over-the-counter equity call options, equity collars, total return swaps, put options, equity futures and call options. See Note 6 for additional information on our derivatives used to hedge our exposure to equity market fluctuations.

Effect of Equity Market Sensitivity

If the level of the Standard & Poor’s (“S&P”) 500 Index® (“S&P 500”) were to have instantaneously increased or decreased by 1% immediately after December 31, 2014, we estimate the effect on income (loss) from operations for the next 12-month period from the change in asset-based fees and related expenses would be approximately \$9 million. For purposes of this sensitivity, we used the S&P 500 as a proxy for equity market performance. This estimate excludes any effect related to sales, unlocking, persistency, hedge program performance or customer behavior caused by the equity market change.

The effect of quarterly equity market changes upon fee income and asset-based expenses is generally not fully recognized in the first quarter of the change because fee income is earned and related expenses are incurred based upon daily variable account values. The difference between the current period average daily variable account values compared to the end-of-period variable account values affects fee income in subsequent periods. Additionally, the effect on earnings may not necessarily be symmetrical with comparable increases or decreases in the equity markets. This discussion concerning the estimated effects of ongoing equity market volatility on the fees we earn from account values and assets under management is intended to be illustrative and is concentrated primarily in our Annuities and Retirement Plan Services segments. Actual effects may vary depending on a variety of factors, many of which are outside of our control, such as changing customer behaviors that might result in changes in the mix of our business between variable and fixed annuity contracts, switching among investment alternatives available within variable products, changes in sales production levels or changes in policy persistency. For purposes of this guidance, the change in account values is assumed to correlate with the change in the relevant index.

Default Risk

Our portfolio of invested assets was \$103.0 billion and \$95.3 billion as of December 31, 2014 and 2013, respectively. Of this total, \$74.9 billion and \$69.5 billion consisted of corporate bonds and \$7.6 billion and \$7.2 billion consisted of mortgage loans on real estate as of December 31, 2014 and 2013, respectively. We manage the risk of adverse default experience on these investments by applying disciplined credit evaluation and underwriting standards, prudently limiting allocations to lower-quality, higher-yielding investments and diversifying exposures by issuer, industry, region and property type. For each counterparty or borrowing entity and its affiliates, our exposures from all transactions are aggregated and managed in relation to formal limits set by rating quality. Additional diversification limits, such as limits per industry, are also applied. We remain exposed to occasional adverse cyclical economic downturns during which default rates may be significantly higher than the long-term historical average used in pricing.

We depend on the ability of derivative product dealers and their guarantors to honor their obligations to pay the contract amounts under various derivatives agreements. In order to minimize the risk of default losses, we diversify our exposures among several dealers and limit the amount of exposure to each in accordance with the credit rating of each dealer or its guarantor. We generally limit our selection of counterparties that are obligated under these derivative contracts to those with an A credit rating or above.

Credit Risk

We may use credit-related derivatives to minimize our exposure to credit-related events, and we also sell credit default swaps to offer credit protection to our contract holders and investors. See Note 6 for additional information.

In addition to the information provided about our counterparty exposure in Note 6, the fair value of our exposure by rating (in millions) was as follows:

	As of December 31, 2014	As of December 31, 2013
AA	\$ 17	\$ (3)
A	19	62
BBB	5	10
Total	\$ 41	\$ 69

See Note 6 for additional information on our credit risk.

Foreign Currency Exchange Risk

Foreign Currency Denominated Investments

We invest in foreign currency securities for incremental return and risk diversification relative to U.S. dollar-denominated securities. We use foreign currency swaps and foreign currency forwards to hedge some of the foreign exchange risk related to our investment in securities denominated in foreign currencies. The currency risk is hedged using foreign currency derivatives of the same currency as the bonds. See Note 6 for additional information on our foreign currency swaps and foreign currency forwards used to hedge our exposure to foreign currency exchange risk.

Item 8. Financial Statements and Supplementary Data

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining adequate internal control over financial reporting for Lincoln National Corporation to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Internal control over financial reporting includes those policies and procedures that: (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with United States of America generally accepted accounting principles, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of internal control over financial reporting effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

Management assessed our internal control over financial reporting as of December 31, 2014, the end of our fiscal year. Management based its assessment on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework). Management's assessment included evaluation of such elements as the design and operating effectiveness of key financial reporting controls, process documentation, accounting policies, and our overall control environment.

Based on the assessment, management has concluded that our internal control over financial reporting was effective as of the end of the fiscal year to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external reporting purposes in accordance with United States of America generally accepted accounting principles.

The effectiveness of our internal control over financial reporting as of December 31, 2014, has been audited by Ernst & Young LLP, an independent registered public accounting firm, as stated in their report which is included on the following page.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders of

Lincoln National Corporation

We have audited Lincoln National Corporation's (the "Corporation") internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (the "COSO criteria"). The Corporation's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Corporation's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Lincoln National Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Lincoln National Corporation as of December 31, 2014 and 2013, and the related consolidated statements of comprehensive income (loss), stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2014 and our report dated February 26, 2015, expressed an unqualified opinion thereon.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders of

Lincoln National Corporation

We have audited the accompanying consolidated balance sheets of Lincoln National Corporation (the "Corporation") as of December 31, 2014 and 2013, and the related consolidated statements of comprehensive income (loss), stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2014. Our audits also included the financial statement schedules listed in the Index at Item 15(a)(2). These financial statements and schedules are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements and schedules based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Lincoln National Corporation at December 31, 2014 and 2013, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2014, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedules, when considered in relation to the basic financial statements taken as a whole, present fairly in all material respects the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Lincoln National Corporation's internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated February 26, 2015, expressed an unqualified opinion thereon.

LINCOLN NATIONAL CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Nature of Operations, Basis of Presentation and Summary of Significant Accounting Policies

Nature of Operations

Lincoln National Corporation and its majority-owned subsidiaries (“LNC” or the “Company,” which also may be referred to as “we,” “our” or “us”) operate multiple insurance businesses through four business segments. See Note 22 for additional details. The collective group of businesses uses “Lincoln Financial Group” as its marketing identity. Through our business segments, we sell a wide range of wealth protection, accumulation and retirement income products and solutions. These products include fixed and indexed annuities, variable annuities, universal life insurance (“UL”), variable universal life insurance (“VUL”), linked-benefit UL, indexed universal life insurance (“IUL”), term life insurance, employer-sponsored retirement plans and services, and group life, disability and dental.

Basis of Presentation

The accompanying consolidated financial statements are prepared in accordance with United States of America generally accepted accounting principles (“GAAP”). Certain GAAP policies, which significantly affect the determination of financial condition, results of operations and cash flows, are summarized below.

Summary of Significant Accounting Policies

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of LNC and all other entities in which we have a controlling financial interest and any variable interest entities (“VIEs”) in which we are the primary beneficiary. Entities in which we do not have a controlling financial interest and do not exercise significant management influence over the operating and financing decisions are reported using the equity method. All material inter-company accounts and transactions have been eliminated in consolidation.

Our involvement with VIEs is primarily to invest in assets that allow us to gain exposure to a broadly diversified portfolio of asset classes. A VIE is an entity that does not have sufficient equity to finance its own activities without additional financial support or where investors lack certain characteristics of a controlling financial interest. We assess our contractual, ownership or other interests in a VIE to determine if our interest participates in the variability the VIE was designed to absorb and pass onto variable interest holders. We perform an ongoing qualitative assessment of our variable interests in VIEs to determine whether we have a controlling financial interest and would therefore be considered the primary beneficiary of the VIE. If we determine we are the primary beneficiary of a VIE, we consolidate the assets and liabilities of the VIE in our consolidated financial statements.

Accounting Estimates and Assumptions

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions affecting the reported amounts of assets and liabilities and the disclosures of contingent assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses for the reporting period. Those estimates are inherently subject to change and actual results could differ from those estimates. Included among the material (or potentially material) reported amounts and disclosures that require extensive use of estimates are: fair value of certain invested assets and derivatives, other-than-temporary impairment (“OTTI”) and asset valuation allowances, deferred acquisition costs (“DAC”), value of business acquired (“VOBA”), deferred sales inducements (“DSI”), goodwill, future contract benefits, other contract holder funds including deferred front-end loads (“DFEL”), pension plans, stock-based incentive compensation, income taxes and the potential effects of resolving litigated matters.

Business Combinations

We use the acquisition method of accounting for all business combination transactions, and accordingly, recognize the fair values of assets acquired, liabilities assumed and any noncontrolling interests in our consolidated financial statements. The allocation of fair values may be subject to adjustment after the initial allocation for up to a one-year period as more information becomes available relative to the fair values as of the acquisition date. The consolidated financial statements include the results of operations of any acquired company since the acquisition date.

Fair Value Measurement

Our measurement of fair value is based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset or non-performance risk, which would include our own credit risk. Our estimate of an exchange price is the price in an orderly transaction between market participants to sell the asset or transfer the liability (“exit price”) in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability, as opposed to the price that would be paid to

acquire the asset or receive a liability (“entry price”). Pursuant to the Fair Value Measurements and Disclosures Topic of the Financial Accounting Standards Board (“FASB”) Accounting Standards Codification™ (“ASC”),

111

we categorize our financial instruments carried at fair value into a three-level fair value hierarchy, based on the priority of inputs to the respective valuation technique. The three-level hierarchy for fair value measurement is defined as follows:

- Level 1 – inputs to the valuation methodology are quoted prices available in active markets for identical investments as of the reporting date, except for large holdings subject to “blockage discounts” that are excluded;
- Level 2 – inputs to the valuation methodology are other than quoted prices in active markets, which are either directly or indirectly observable as of the reporting date, and fair value can be determined through the use of models or other valuation methodologies; and
- Level 3 – inputs to the valuation methodology are unobservable inputs in situations where there is little or no market activity for the asset or liability, and we make estimates and assumptions related to the pricing of the asset or liability, including assumptions regarding risk.

In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment and considers factors specific to the investment.

When a determination is made to classify an asset or liability within Level 3 of the fair value hierarchy, the determination is based upon the significance of the unobservable inputs to the overall fair value measurement. Because certain securities trade in less liquid or illiquid markets with limited or no pricing information, the determination of fair value for these securities is inherently more difficult. However, Level 3 fair value investments may include, in addition to the unobservable or Level 3 inputs, observable components, which are components that are actively quoted or can be validated to market-based sources.

Available-For-Sale Securities – Fair Valuation Methodologies and Associated Inputs

Securities classified as available-for-sale (“AFS”) consist of fixed maturity and equity securities and are stated at fair value with unrealized gains and losses included within accumulated other comprehensive income (loss) (“AOCI”), net of associated DAC, VOBA, DSI, future contract benefits, other contract holder funds and deferred income taxes.

We measure the fair value of our securities classified as AFS based on assumptions used by market participants in pricing the security. The most appropriate valuation methodology is selected based on the specific characteristics of the fixed maturity or equity security, and we consistently apply the valuation methodology to measure the security’s fair value. Our fair value measurement is based on a market approach that utilizes prices and other relevant information generated by market transactions involving identical or comparable securities. Sources of inputs to the market approach primarily include third-party pricing services, independent broker quotations or pricing matrices. We do not adjust prices received from third parties; however, we do analyze the third-party pricing services’ valuation methodologies and related inputs and perform additional evaluation to determine the appropriate level within the fair value hierarchy.

The observable and unobservable inputs to our valuation methodologies are based on a set of standard inputs that we generally use to evaluate all of our AFS securities. Observable inputs include benchmark yields, reported trades, broker-dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers and reference data. In addition, market indicators, industry and economic events are monitored, and further market data is acquired if certain triggers are met. For certain security types, additional inputs may be used, or some of the inputs described above may not be applicable. For private placement securities, we use pricing matrices that utilize observable pricing inputs of similar public securities and Treasury yields as inputs to the fair value measurement. Depending on the type of security or the daily market activity, standard inputs may be prioritized differently or may not be available for all AFS securities on any given day. For broker-quoted only securities, non-binding quotes from market makers or broker-dealers are obtained from sources recognized as market participants. For securities trading in less liquid or illiquid markets with limited or no pricing information, we use unobservable inputs to measure fair value.

The following summarizes our fair valuation methodologies and associated inputs, which are particular to the specified security type and are in addition to the defined standard inputs to our valuation methodologies for all of our AFS securities discussed above:

- Corporate bonds and U.S. government bonds – We also use Trade Reporting and Compliance Engine™ reported tables for our corporate bonds and vendor trading platform data for our U.S. government bonds.
- Mortgage- and asset-backed securities (“ABS”) – We also utilize additional inputs, which include new issues data, monthly payment information and monthly collateral performance, including prepayments, severity, delinquencies, step-down features and over collateralization features for each of our mortgage-backed securities (“MBS”), which include collateralized mortgage obligations and mortgage pass through securities backed by residential mortgages (“RMBS”), commercial mortgage-backed securities (“CMBS”), collateralized loan obligations (“CLOs”) and collateralized debt obligations (“CDOs”).
- State and municipal bonds – We also use additional inputs that include information from the Municipal Securities Rule Making Board, as well as material event notices, new issue data, issuer financial statements and Municipal Market Data benchmark yields for our state and municipal bonds.
- Hybrid and redeemable preferred and equity securities – We also utilize additional inputs of exchange prices (underlying and common stock of the same issuer) for our hybrid and redeemable preferred and equity securities.

In order to validate the pricing information and broker-dealer quotes, we employ, where possible, procedures that include comparisons with similar observable positions, comparisons with subsequent sales and observations of general market movements for those security classes. We have policies and procedures in place to review the process that is utilized by our third-party pricing service and the output that is provided to us by the pricing service. On a periodic basis, we test the pricing for a sample of securities to evaluate the inputs and assumptions used by the pricing service, and we perform a comparison of the pricing service output to an alternative pricing source. We also evaluate prices provided by our primary pricing service to ensure that they are not stale or unreasonable by reviewing the prices for unusual changes from period to period based on certain parameters or for lack of change from one period to the next.

AFS Securities – Evaluation for Recovery of Amortized Cost

We regularly review our AFS securities for declines in fair value that we determine to be other-than-temporary. For an equity security, if we do not have the ability and intent to hold the security for a sufficient period of time to allow for a recovery in value, we conclude that an OTTI has occurred and the amortized cost of the equity security is written down to the current fair value, with a corresponding charge to realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). When assessing our ability and intent to hold the equity security to recovery, we consider, among other things, the severity and duration of the decline in fair value of the equity security as well as the cause of the decline, a fundamental analysis of the liquidity, and business prospects and overall financial condition of the issuer.

For our fixed maturity AFS securities (also referred to as “debt securities”), we generally consider the following to determine whether our unrealized losses are other-than-temporarily impaired:

- The estimated range and average period until recovery;
- The estimated range and average holding period to maturity;
- Remaining payment terms of the security;
- Current delinquencies and nonperforming assets of underlying collateral;
- Expected future default rates;
- Collateral value by vintage, geographic region, industry concentration or property type;
- Subordination levels or other credit enhancements as of the balance sheet date as compared to origination; and
- Contractual and regulatory cash obligations.

For a debt security, if we intend to sell a security, or it is more likely than not we will be required to sell a debt security before recovery of its amortized cost basis and the fair value of the debt security is below amortized cost, we conclude that an OTTI has occurred and the amortized cost is written down to current fair value, with a corresponding charge to realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). If we do not intend to sell a debt security, or it is not more likely than not we will be required to sell a debt security before recovery of its amortized cost basis but the present value of the cash flows expected to be collected is less than the amortized cost of the debt security (referred to as the credit loss), we conclude that an OTTI has occurred and the amortized cost is written down to the estimated recovery value with a corresponding charge to realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss), as this amount is deemed the credit portion of the OTTI. The remainder

of the decline to fair value is recorded in other comprehensive income (“OCI”) to unrealized OTTI on AFS securities on our Consolidated Statements of Stockholders’ Equity, as this amount is considered a noncredit (i.e., recoverable) impairment.

When assessing our intent to sell a debt security, or if it is more likely than not we will be required to sell a debt security before recovery of its cost basis, we evaluate facts and circumstances such as, but not limited to, decisions to reposition our security portfolio, sales of securities to meet cash flow needs and sales of securities to capitalize on favorable pricing. In order to determine the amount of the credit loss for a debt security, we calculate the recovery value by performing a discounted cash flow analysis based on the current cash flows and future cash flows we expect to recover. The discount rate is the effective interest rate implicit in the underlying debt security. The effective interest rate is the original yield, or the coupon if the debt security was previously impaired. See the discussion below for additional information on the methodology and significant inputs, by security type, which we use to determine the amount of a credit loss.

Our conclusion that it is not more likely than not that we will be required to sell the fixed maturity AFS securities before recovery of their amortized cost basis, the estimated future cash flows are equal to or greater than the amortized cost basis of the debt securities, or we have the ability to hold the equity AFS securities for a period of time sufficient for recovery is based upon our asset-liability management process. Management considers the following as part of the evaluation:

- The current economic environment and market conditions;
- Our business strategy and current business plans;
- The nature and type of security, including expected maturities and exposure to general credit, liquidity, market and interest rate risk;
- Our analysis of data from financial models and other internal and industry sources to evaluate the current effectiveness of our hedging and overall risk management strategies;
- The current and expected timing of contractual maturities of our assets and liabilities, expectations of prepayments on investments and expectations for surrenders and withdrawals of life insurance policies and annuity contracts;
- The capital risk limits approved by management; and
- Our current financial condition and liquidity demands.

To determine the recovery period of a debt security, we consider the facts and circumstances surrounding the underlying issuer including, but not limited to, the following:

- Historical and implied volatility of the security;
- Length of time and extent to which the fair value has been less than amortized cost;
- Adverse conditions specifically related to the security or to specific conditions in an industry or geographic area;
- Failure, if any, of the issuer of the security to make scheduled payments; and
- Recoveries or additional declines in fair value subsequent to the balance sheet date.

In periods subsequent to the recognition of an OTTI, the AFS security is accounted for as if it had been purchased on the measurement date of the OTTI. Therefore, for the fixed maturity AFS security, the original discount or reduced premium is reflected in net investment income over the contractual term of the investment in a manner that produces a constant effective yield.

To determine recovery value of a corporate bond, CLO or CDO, we perform additional analysis related to the underlying issuer including, but not limited to, the following:

- Fundamentals of the issuer to determine what we would recover if they were to file bankruptcy versus the price at which the market is trading;
- Fundamentals of the industry in which the issuer operates;
- Earnings multiples for the given industry or sector of an industry that the underlying issuer operates within, divided by the outstanding debt to determine an expected recovery value of the security in the case of a liquidation;
- Expected cash flows of the issuer (e.g., whether the issuer has cash flows in excess of what is required to fund its operations);
- Expectations regarding defaults and recovery rates;
- Changes to the rating of the security by a rating agency; and
- Additional market information (e.g., if there has been a replacement of the corporate debt security).

Each quarter we review the cash flows for the MBS to determine whether or not they are sufficient to provide for the recovery of our amortized cost. We revise our cash flow projections only for those securities that are at most risk for impairment based on current credit enhancement and trends in the underlying collateral performance. To determine recovery value of a MBS, we perform additional analysis related to the underlying issuer including, but not limited to, the following:

- Discounted cash flow analysis based on the current cash flows and future cash flows we expect to recover;
- Level of creditworthiness of the home equity loans or residential mortgages that back an RMBS or commercial mortgages that back a CMBS;
- Susceptibility to fair value fluctuations for changes in the interest rate environment;
- Susceptibility to reinvestment risks, in cases where market yields are lower than the securities' book yield earned;

- Susceptibility to reinvestment risks, in cases where market yields are higher than the book yields earned on a security;
- Expectations of sale of such a security where market yields are higher than the book yields earned on a security; and
- Susceptibility to variability of prepayments.

When evaluating MBS and mortgage-related ABS, we consider a number of pool-specific factors as well as market level factors when determining whether or not the impairment on the security is temporary or other-than-temporary. The most important factor is the performance of the underlying collateral in the security and the trends of that performance in the prior periods. We use this information about the collateral to forecast the timing and rate of mortgage loan defaults, including making projections for loans that are already delinquent and for those loans that are currently performing but may become delinquent in the future. Other factors used in this analysis include type of underlying collateral (e.g., prime, Alt-A or subprime), geographic distribution of underlying loans and timing of liquidations by state. Once default rates and timing assumptions are determined, we then make assumptions regarding the severity of a default if it were to occur. Factors that impact the severity assumption include expectations for future home price appreciation or depreciation, loan size, first lien versus second lien, existence of loan level private mortgage insurance, type of occupancy and geographic distribution of loans. Once default and severity assumptions are determined for the security in question, cash flows for the underlying collateral are projected including expected defaults and prepayments. These cash flows on the collateral are then translated to cash flows on our tranche based on the cash flow waterfall of the entire capital security structure. If this analysis indicates the entire principal on a particular security will not be returned, the security is reviewed for OTTI by comparing the expected cash flows to amortized cost. To the extent that the security has already been impaired or was purchased at a discount, such that the amortized cost of the security is less than or equal to the present value of cash flows expected to be collected, no impairment is required.

Otherwise, if the amortized cost of the security is greater than the present value of the cash flows expected to be collected, and the security was not purchased at a discount greater than the expected principal loss, then impairment is recognized.

We further monitor the cash flows of all of our AFS securities backed by pools on an ongoing basis. We also perform detailed analysis on all of our subprime, Alt-A, non-agency residential MBS and on a significant percentage of our AFS securities backed by pools of commercial mortgages. The detailed analysis includes revising projected cash flows by updating the cash flows for actual cash received

and applying assumptions with respect to expected defaults, foreclosures and recoveries in the future. These revised projected cash flows are then compared to the amount of credit enhancement (subordination) in the structure to determine whether the amortized cost of the security is recoverable. If it is not recoverable, we record an impairment of the security.

Trading Securities

Trading securities consist of fixed maturity and equity securities in designated portfolios, some of which support modified coinsurance (“Modco”) and coinsurance with funds withheld (“CFW”) reinsurance arrangements. Investment results for the portfolios that support Modco and CFW reinsurance arrangements, including gains and losses from sales, are passed directly to the reinsurers pursuant to contractual terms of the reinsurance arrangements. Trading securities are carried at fair value and changes in fair value and changes in the fair value of embedded derivative liabilities associated with the underlying reinsurance arrangements, are recorded in realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss) as they occur.

Alternative Investments

Alternative investments, which consist primarily of investments in limited partnerships (“LPs”), are included in other investments on our Consolidated Balance Sheets. We account for our investments in LPs using the equity method to determine the carrying value. Recognition of alternative investment income is delayed due to the availability of the related financial statements, which are generally obtained from the partnerships’ general partners. As a result, our venture capital, real estate and oil and gas portfolios are generally on a three-month delay and our hedge funds are on a one-month delay. In addition, the impact of audit adjustments related to completion of calendar-year financial statement audits of the investees are typically received during the second quarter of each calendar year. Accordingly, our investment income from alternative investments for any calendar-year period may not include the complete impact of the change in the underlying net assets for the partnership for that calendar-year period.

Payables for Collateral on Investments

When we enter into collateralized financing transactions on our investments, a liability is recorded equal to the cash or non-cash collateral received. This liability is included within payables for collateral on investments on our Consolidated Balance Sheets. Income and expenses associated with these transactions are recorded as investment income and investment expenses within net investment income on our Consolidated Statements of Comprehensive Income (Loss). Changes in payables for collateral on investments are reflected within cash flows from investing activities on our Consolidated Statements of Cash Flows.

Mortgage Loans on Real Estate

Mortgage loans on real estate are carried at unpaid principal balances adjusted for amortization of premiums and accretion of discounts and are net of valuation allowances. Interest income is accrued on the principal balance of the loan based on the loan's contractual interest rate. Premiums and discounts are amortized using the effective yield method over the life of the loan. Interest income and amortization of premiums and discounts are reported in net investment income on our Consolidated Statements of Comprehensive Income (Loss) along with mortgage loan fees, which are recorded as they are incurred.

Our commercial loan portfolio is comprised of long-term loans secured by existing commercial real estate. As such, it does not exhibit risk characteristics unique to mezzanine, construction, residential, agricultural, land or other types of real estate loans. We believe all of the loans in our portfolio share three primary risks: borrower creditworthiness; sustainability of the cash flow of the property; and market risk; therefore, our methods for monitoring and assessing credit risk are consistent for our entire portfolio. Loans are considered impaired when it is probable that, based upon current information and events, we will be unable to collect all amounts due under the contractual terms of the loan agreement. When we determine that a loan is impaired, a valuation allowance is established for the excess carrying value of the loan over its estimated value. The loan's estimated value is based on: the present value of expected future cash flows discounted at the loan's effective interest rate; the loan's observable market price; or the fair value of the loan's collateral. Valuation allowances are maintained at a level we believe is adequate to absorb estimated probable credit losses of each specific loan. Our periodic evaluation of the adequacy of the allowance for losses is based on our past loan loss experience, known and inherent risks in the portfolio, adverse situations that may affect the borrower's ability to repay (including the timing of future payments), the estimated value of the underlying collateral, composition of the loan portfolio, current economic conditions and other relevant factors. Trends in market vacancy and rental rates are incorporated into the analysis that we perform for monitored loans and may contribute to the establishment of (or an increase or decrease in) an allowance for credit losses. In addition, we review each loan individually in our commercial mortgage loan portfolio on an annual basis to identify emerging risks. We focus on properties that experienced a reduction in debt-service coverage or that have significant exposure to tenants with deteriorating credit profiles. Where warranted, we establish or increase loss reserves for a specific loan based upon this analysis. Our process for determining past due or delinquency status begins when a payment date is missed, at which time the borrower is contacted. After the grace period expiration that may last up to 10 days, we send a default notice. The default notice generally provides a short time period to cure the default. Our policy is to report loans that are 60 or more days past due, which equates to two or more payments missed, as delinquent. We do not accrue interest on loans 90 days past due, and any interest received on these loans is either applied to the principal or recorded in net investment income on our Consolidated Statements of Comprehensive Income (Loss) when received, depending on the assessment of the collectability of the loan. We resume accruing interest once a loan complies with all of its original terms or restructured terms. Mortgage loans deemed uncollectable are charged against the allowance for losses, and subsequent recoveries, if any, are credited to the allowance for losses. All mortgage loans that are impaired have an established allowance for credit losses. Changes in valuation allowances are reported in realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss).

We measure and assess the credit quality of our mortgage loans by using loan-to-value and debt-service coverage ratios. The loan-to-value ratio compares the principal amount of the loan to the fair value at origination of the underlying property collateralizing the loan and is commonly expressed as a percentage. Loan-to-value ratios greater than 100% indicate that the principal amount is greater than the collateral value. Therefore, all else being equal, a lower loan-to-value ratio generally indicates a higher quality loan. The debt-service coverage ratio compares a property's net operating income to its debt-service payments. Debt-service coverage ratios of less than 1.0 indicate that property operations do not generate enough income to cover its current debt payments. Therefore, all else being equal, a higher debt-service coverage ratio generally indicates a higher quality loan.

Policy Loans

Policy loans represent loans we issue to contract holders that use the cash surrender value of their life insurance policy as collateral. Policy loans are carried at unpaid principal balances.

Real Estate

Real estate includes both real estate held for the production of income and real estate held-for-sale. Real estate held for the production of income is carried at cost less accumulated depreciation. Depreciation is calculated on a straight-line basis over the estimated useful life of the asset. We periodically review properties held for the production of income for impairment. Properties whose carrying values are greater than their projected undiscounted cash flows are written down to estimated fair value, with impairment losses reported in realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). The estimated fair value of real estate is generally computed using the present value of expected future cash flows from the real estate discounted at a rate commensurate with the underlying risks. Real estate classified as held-for-sale is stated at the lower of depreciated cost or fair value less expected disposition costs at the time classified as held-for-sale. Real estate is not depreciated while it is classified as held-for-sale. Also, valuation allowances for losses are established, as appropriate, for real estate held-for-sale and any changes to the valuation allowances are reported in realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss). Real estate acquired through foreclosure proceedings is recorded at fair value at the settlement date.

Derivative Instruments

We hedge certain portions of our exposure to interest rate risk, foreign currency exchange risk, equity market risk and credit risk by entering into derivative transactions. All of our derivative instruments are recognized as either assets or liabilities on our Consolidated Balance Sheets at estimated fair value. We categorized derivatives into a three-level hierarchy, based on the priority of the inputs to the respective valuation technique as discussed above in "Fair Value Measurement." The accounting for changes in the estimated fair value of a derivative instrument depends on whether it

has been designated and qualifies as part of a hedging relationship, and further, on the type of hedging relationship. For those derivative instruments that are designated and qualify as hedging instruments, we designate the hedging instrument based upon the exposure being hedged: as a cash flow hedge or a fair value hedge.

For derivative instruments that are designated and qualify as a cash flow hedge, the effective portion of the gain or loss on the derivative instrument is reported as a component of AOCI and reclassified into net income in the same period or periods during which the hedged transaction affects net income. The remaining gain or loss on the derivative instrument in excess of the cumulative change in the present value of designated future cash flows of the hedged item (hedge ineffectiveness), if any, is recognized in net income during the period of change. For derivative instruments that are designated and qualify as a fair value hedge, the gain or loss on the derivative instrument, as well as the offsetting gain or loss on the hedged item attributable to the hedged risk are recognized in net income during the period of change in estimated fair values. For derivative instruments not designated as hedging instruments, but that are economic hedges, the gain or loss is recognized in net income.

We purchase and issue financial instruments and products that contain embedded derivative instruments. When it is determined that the embedded derivative possesses economic characteristics that are not clearly and closely related to the economic characteristics of the host contract, and a separate instrument with the same terms would qualify as a derivative instrument, the embedded derivative is bifurcated from the host for measurement purposes. The embedded derivative is carried at fair value with changes in fair value recognized in net income during the period of change.

We employ several different methods for determining the fair value of our derivative instruments. The fair value of our derivative contracts are measured based on current settlement values, which are based on quoted market prices, industry standard models that are commercially available and broker quotes. These techniques project cash flows of the derivatives using current and implied future market conditions. We calculate the present value of the cash flows to measure the current fair market value of the derivative.

Cash and Invested Cash

Cash and invested cash is carried at cost and includes all highly liquid debt instruments purchased with an original maturity of three months or less.

DAC, VOBA, DSI and DFEL

Acquisition costs directly related to successful contract acquisitions or renewals of UL insurance, VUL insurance, traditional life insurance, annuities and other investment contracts have been deferred (i.e., DAC) to the extent recoverable. VOBA is an intangible asset that reflects the estimated fair value of in-force contracts in a life insurance company acquisition and represents the portion of the purchase price that is allocated to the value of the right to receive future cash flows from the business in force at the acquisition date. Bonus credits and excess interest for dollar cost averaging contracts are considered DSI. Contract sales charges that are collected in the early years of an insurance contract are deferred (i.e., DFEL), and the unamortized balance is reported in other contract holder funds on our Consolidated Balance Sheets.

Both DAC and VOBA amortization, excluding amounts reported in realized gain (loss), is reported within commissions and other expenses on our Consolidated Statements of Comprehensive Income (Loss). DSI amortization, excluding amounts reported in realized gain (loss), is reported in interest credited on our Consolidated Statements of Comprehensive Income (Loss). The amortization of DFEL, excluding amounts reported in realized gain (loss), is reported within fee income on our Consolidated Statements of Comprehensive Income (Loss). The methodology for determining the amortization of DAC, VOBA, DSI and DFEL varies by product type. For all insurance contracts, amortization is based on assumptions consistent with those used in the development of the underlying contract adjusted for emerging experience and expected trends.

Acquisition costs for UL and VUL insurance and investment-type products, which include fixed and variable deferred annuities, are generally amortized over the lives of the policies in relation to the incidence of estimated gross profits (“EGPs”) from surrender charges, investment, mortality net of reinsurance ceded and expense margins and actual realized gain (loss) on investments. Contract lives for UL and VUL policies are estimated to be 30 to 40 years based on the expected lives of the contracts. Contract lives for fixed and variable deferred annuities are generally between 13 and 30 years, while some of our fixed multi-year guarantee products have amortization periods equal to the guarantee period. The front-end load annuity product has an assumed life of 25 years. Longer lives are assigned to those blocks that have demonstrated favorable lapse experience.

Acquisition costs for all traditional contracts, including traditional life insurance contracts, such as individual whole life, group business and term life insurance, are amortized over the expected premium-paying period that ranges from 7 to 77 years. Acquisition costs are either amortized on a straight-line basis or as a level percent of premium of the related policies depending on the block of business. There is currently no DAC, VOBA, DSI or DFEL balance or related amortization for fixed and variable payout annuities.

We account for modifications of insurance contracts that result in a substantially unchanged contract as a continuation of the replaced contract. We account for modifications of insurance contracts that result in a substantially changed contract as an extinguishment of the replaced contract.

The carrying amounts of DAC, VOBA, DSI and DFEL are adjusted for the effects of realized and unrealized gains and losses on securities classified as AFS and certain derivatives and embedded derivatives. Amortization expense of DAC, VOBA, DSI and DFEL reflects an assumption for an expected level of credit-related investment losses. When actual credit-related investment losses are realized, we recognize a true-up to our DAC, VOBA, DSI and DFEL amortization within realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss) reflecting the incremental effect of actual versus expected credit-related investment losses. These actual to expected amortization adjustments can create volatility from period to period in realized gain (loss).

During the third quarter of each year, we conduct our annual comprehensive review of the assumptions and the projection models used for our estimates of future gross profits underlying the amortization of DAC, VOBA, DSI and DFEL and the calculations of the embedded derivatives and reserves for life insurance and annuity products with living benefit and death benefit guarantees. These assumptions include investment margins, mortality, retention, rider utilization and maintenance expenses (costs associated with maintaining records relating to insurance and individual and group annuity contracts, and with the processing of premium collections, deposits, withdrawals and commissions). Based on our review, the cumulative balances of DAC, VOBA, DSI and DFEL included on our Consolidated Balance Sheets are adjusted with an offsetting benefit or charge to revenue or amortization expense to reflect such change related to our expectations of future EGPs (“unlocking”). We may have unlocking in other quarters as we become aware of information that warrants updating assumptions outside of our annual comprehensive review. We may also identify and implement actuarial modeling refinements that result in increases or decreases to the carrying values of DAC, VOBA, DSI, DFEL, embedded derivatives and reserves for life insurance and annuity products with living benefit and death benefit guarantees.

DAC, VOBA, DSI and DFEL are reviewed to ensure that the unamortized portion does not exceed the expected recoverable amounts.

Reinsurance

Our insurance companies enter into reinsurance agreements with other companies in the normal course of business. Assets and liabilities and premiums and benefits from certain reinsurance contracts that grant statutory surplus relief to other insurance companies are netted on our Consolidated Balance Sheets and Consolidated Statements of Comprehensive Income (Loss), respectively, because there is a right of offset. All other reinsurance agreements are reported on a gross basis on our Consolidated Balance Sheets as an asset for amounts recoverable from reinsurers or as a component of other liabilities for amounts, such as premiums, owed to the reinsurers, with the exception of Modco agreements for which the right of offset also exists. Reinsurance premiums and benefits paid or provided are accounted for on bases consistent with those used in accounting for the original policies issued and the terms of the reinsurance contracts. Premiums, benefits and DAC are reported net of insurance ceded.

Goodwill

We recognize the excess of the purchase price, plus the fair value of any noncontrolling interest in the acquiree, over the fair value of identifiable net assets acquired as goodwill. Goodwill is not amortized, but is reviewed at least annually for indications of value impairment, with consideration given to financial performance and other relevant factors. We perform a two-step test in our evaluation of the carrying value of goodwill for each of our reporting units, if qualitative factors determine it is necessary to complete the two-step goodwill impairment test. The results of one test on one reporting unit cannot subsidize the results of another reporting unit. In Step 1 of the evaluation, the fair value of each reporting unit is determined and compared to the carrying value of the reporting unit. If the fair value is greater than the carrying value, then the carrying value of the reporting unit is deemed to be recoverable, and Step 2 is not required. If the fair value estimate is less than the carrying value, it is an indicator that impairment may exist, and Step 2 is required. In Step 2, the implied fair value of goodwill is determined for the reporting unit. The reporting unit's fair value as determined in Step 1 is assigned to all of its net assets (recognized and unrecognized) as if the reporting unit were acquired in a business combination as of the date of the impairment test. If the implied fair value of the reporting unit's goodwill is lower than its carrying amount, goodwill is impaired and written down to its fair value; and a charge is reported in impairment of intangibles on our Consolidated Statements of Comprehensive Income (Loss).

Other Assets and Other Liabilities

Other assets consist primarily of DSI, specifically identifiable intangible assets, property and equipment owned by the Company, balances associated with corporate-owned and bank-owned life insurance, certain reinsurance assets, receivables resulting from sales of securities that had not yet settled as of the balance sheet date, debt issue costs, assets under capital leases and other prepaid expenses. Other liabilities consist primarily of current and deferred taxes, pension and other employee benefit liabilities, derivative instrument liabilities, certain reinsurance payables, payables resulting from purchases of securities that had not yet settled as of the balance sheet date, interest on borrowed funds, obligations under capital leases and other accrued expenses.

Other assets and other liabilities on our Consolidated Balance Sheets include guaranteed living benefit ("GLB") features and remaining guaranteed interest and similar contracts that are carried at fair value, which may be reported in either other assets or other liabilities. The fair value of these items represents approximate exit price including an estimate for our non-performance risk ("NPR"). Certain of these features have elements of both insurance benefits and embedded derivatives. Through our hybrid accounting approach, for reserve calculation purposes we assign product cash flows to the embedded derivative or insurance portion of the reserves based on the life-contingent nature of the benefits. We classify these GLB reserves embedded derivatives in Level 3 within the hierarchy levels described above in "Fair Value Measurement." We report the insurance portion of the reserves in future contract benefits.

The carrying values of specifically identifiable intangible assets are reviewed at least annually for indicators of impairment in value that are other-than-temporary, including unexpected or adverse changes in the following: the

economic or competitive environments in which the company operates; profitability analyses; cash flow analyses; and the fair value of the relevant business operation. If there was an indication of impairment, then the discounted cash flow method would be used to measure the impairment, and the carrying value would be adjusted as necessary and reported in impairment of intangibles on our Consolidated Statements of Comprehensive Income (Loss). Sales force intangibles are attributable to the value of the new business distribution system acquired through business combinations. These assets are amortized on a straight-line basis over their useful life of 25 years. Federal Communications Commission ("FCC") licenses acquired through business combinations are not amortized.

Property and equipment owned for company use is carried at cost less allowances for depreciation. Provisions for depreciation of investment real estate and property and equipment owned for company use are computed principally on the straight-line method over the estimated useful lives of the assets, which include buildings, computer hardware and software and other property and equipment. Certain assets on our Consolidated Balance Sheets are related to capital leases. These assets under capital leases are depreciated in a manner consistent with our current depreciation policy for owned assets. We periodically review the carrying value of our long-lived assets, including property and equipment, for impairment whenever events or circumstances indicate that the carrying amount of such assets may not be fully recoverable. For long-lived assets to be held and used, impairments are recognized when the carrying amount of a long-lived asset is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. An impairment loss is measured as the amount by which the carrying amount of a long-lived asset exceeds its fair value.

Long-lived assets to be disposed of by abandonment or in an exchange for a similar productive long-lived asset are classified as held-for-use until they are disposed. Long-lived assets to be sold are classified as held-for-sale and are no longer depreciated. Certain criteria have to be met in order for the long-lived asset to be classified as held-for-sale, including that a sale is probable and expected to occur within one year. Long-lived assets classified as held-for-sale are recorded at the lower of their carrying amount or fair value less cost to sell.

Separate Account Assets and Liabilities

We maintain separate account assets, which are reported at fair value. The related liabilities are reported at an amount equivalent to the separate account assets. Investment risks associated with market value changes are borne by the contract holders, except to the extent of minimum guarantees made by the Company with respect to certain accounts.

We issue variable annuity contracts through our separate accounts for which investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder (traditional variable annuities). We also issue variable annuity and life contracts through separate accounts that include various types of guaranteed death benefit (“GDB”), guaranteed withdrawal benefit (“GWB”) and guaranteed income benefit (“GIB”) features. The GDB features include those where we contractually guarantee to the contract holder either: return of no less than total deposits made to the contract less any partial withdrawals (“return of net deposits”); total deposits made to the contract less any partial withdrawals plus a minimum return (“minimum return”); or the highest contract value on any contract anniversary date through age 80 minus any payments or withdrawals following the contract anniversary (“anniversary contract value”).

As discussed in Note 6, certain features of these guarantees are accounted for as embedded derivative reserves, whereas other guarantees are accounted for as benefit reserves. Other guarantees contain characteristics of both and are accounted for under an approach that calculates the value of the embedded derivative reserve and the benefit reserve based on the specific characteristics of each GLB feature. We use derivative instruments to hedge our exposure to the risks and earnings volatility that result from the embedded derivatives for living benefits in certain of our variable annuity products. The change in fair value of these instruments tends to move in the opposite direction of the change in the value of the associated reserves. The net impact of these changes is reported as a component of realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss).

The “market consistent scenarios” used in the determination of the fair value of the GLB liability are similar to those used by an investment bank to value derivatives for which the pricing is not transparent and the aftermarket is nonexistent or illiquid. We use risk-neutral Monte Carlo simulations in our calculation to value the entire block of guarantees, which involve 100 unique scenarios per policy or approximately 46 million scenarios. The market consistent scenario assumptions, as of each valuation date, are those we view to be appropriate for a hypothetical market participant. The market consistent inputs include assumptions for the capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.), policyholder behavior (e.g., policy lapse, benefit utilization, mortality, etc.), risk margins, administrative expenses and a margin for profit. We believe these assumptions are consistent with those that would be used by a market participant; however, as the related markets develop we will continue to reassess our assumptions. It is possible that different valuation techniques and assumptions could produce a materially different estimate of fair value.

Future Contract Benefits and Other Contract Holder Funds

Future contract benefits represent liability reserves that we have established and carry based on estimates of how much we will need to pay for future benefits and claims. Other contract holder funds represent liabilities for fixed account values, including the fixed portion of variable, dividends payable, premium deposit funds, undistributed earnings on participating business and other contract holder funds as well the carrying value of DFEL discussed above.

The liabilities for future contract benefits and claim reserves for UL and VUL insurance policies consist of contract account balances that accrue to the benefit of the contract holders, excluding surrender charges. The liabilities for future insurance contract benefits and claim reserves for traditional life policies are computed using assumptions for investment yields, mortality and withdrawals based principally on generally accepted actuarial methods and assumptions at the time of contract issue. Investment yield assumptions for traditional direct individual life reserves for all contracts range from 2.25% to 7.75% depending on the time of contract issue. The investment yield assumptions for immediate and deferred paid-up annuities range from 1.50% to 13.50%. These investment yield assumptions are intended to represent an estimation of the interest rate experience for the period that these contract benefits are payable.

The liabilities for future claim reserves for variable annuity products containing GDB features are calculated by estimating the present value of total expected benefit payments over the life of the contract from inception divided by the present value of total expected assessments over the life of the contract ("benefit ratio") multiplied by the cumulative assessments recorded from the contract inception through the balance sheet date less the cumulative GDB payments plus interest on the liability. The change in the liability for a period is the benefit ratio multiplied by the assessments recorded for the period less GDB claims paid in the period plus interest. As experience or assumption changes result in a change in expected benefit payments or assessments, the benefit ratio is unlocked, that is, recalculated using the updated expected benefit payments and assessments over the life of the contract since inception. The revised benefit ratio is then applied to the liability calculation described above, with the resulting change in liability reported in benefits on our Consolidated Statements of Comprehensive Income (Loss).

With respect to our future contract benefits and other contract holder funds, we continually review overall reserve position, reserving techniques and reinsurance arrangements. As experience develops and new information becomes known, liabilities are adjusted as deemed necessary. The effects of changes in estimates are included in the operating results for the period in which such changes occur.

The business written or assumed by us includes participating life insurance contracts, under which the contract holder is entitled to share in the earnings of such contracts via receipt of dividends. The dividend scale for participating policies is reviewed annually and may be adjusted to reflect recent experience and future expectations. As of December 31, 2014 and 2013, participating policies comprised

approximately 1% of the face amount of insurance in force, and dividend expenses were \$64 million, \$62 million and \$71 million for the years ended December 31, 2014, 2013 and 2012, respectively.

Liabilities for the secondary guarantees on UL-type products are calculated by multiplying the benefit ratio by the cumulative assessments recorded from contract inception through the balance sheet date less the cumulative secondary guarantee benefit payments plus interest. If experience or assumption changes result in a new benefit ratio, the reserves are adjusted to reflect the changes in a manner similar to the unlocking of DAC, VOBA, DFEL and DSI. The accounting for secondary guarantee benefits impacts, and is impacted by, EGPs used to calculate amortization of DAC, VOBA, DFEL and DSI.

Certain of our variable annuity contracts reported within future contract benefits contain GLB reserves embedded derivatives, a portion of which may be reported in either other assets or other liabilities, and include guaranteed interest and similar contracts, that are carried at fair value on our Consolidated Balance Sheets, which represents approximate exit price including an estimate for our NPR. Certain of these features have elements of both insurance benefits and embedded derivatives. Through our hybrid accounting approach, for reserve calculation purposes we assign product cash flows to the embedded derivative or insurance portion of the reserves based on the life-contingent nature of the benefits. We classify these GLB reserves embedded derivatives items in Level 3 within the hierarchy levels described above in "Fair Value Measurement." We report the insurance portion of the reserves in future contract benefits.

The fair value of our indexed annuity contracts is based on their approximate surrender values.

Borrowed Funds

LNC's short-term borrowings are defined as borrowings with contractual or expected maturities of one year or less. Long-term borrowings have contractual or expected maturities greater than one year.

Deferred Gain on Business Sold Through Reinsurance

Our reinsurance operations were acquired by Swiss Re Life & Health America, Inc. ("Swiss Re") in December 2001 through a series of indemnity reinsurance transactions. We are recognizing the gain related to these transactions at the rate that earnings on the reinsured business are expected to emerge, over a period of 15 years from the date of sale.

Contingencies and Commitments

Contingencies arising from environmental remediation costs, regulatory judgments, claims, assessments, guarantees, litigation, recourse reserves, fines, penalties and other sources are recorded when deemed probable and reasonably estimable.

Fee Income

Fee income for investment and interest-sensitive life insurance contracts consist of asset-based fees, cost of insurance charges, percent of premium charges, contract administration charges and surrender charges that are assessed against contract holder account balances. Investment products consist primarily of individual and group variable and fixed deferred annuities. Interest-sensitive life insurance products include UL insurance, VUL insurance and other interest-sensitive life insurance policies. These products include life insurance sold to individuals, corporate-owned life insurance and bank-owned life insurance.

In bifurcating the embedded derivative of our GLB features on our variable annuity products, we attribute to the embedded derivative the portion of total fees collected from the contract holder that relate to the GLB riders (the “attributed fees”), which are not reported within fee income on our Consolidated Statements of Comprehensive Income (Loss). These attributed fees represent the present value of future claims expected to be paid for the GLB at the inception of the contract plus a margin that a theoretical market participant would include for risk/profit and are reported within realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss).

The timing of revenue recognition as it relates to fees assessed on investment contracts is determined based on the nature of such fees. Asset-based fees, cost of insurance and contract administration charges are assessed on a daily or monthly basis and recognized as revenue when assessed and earned. Percent of premium charges are assessed at the time of premium payment and recognized as revenue when assessed and earned. Certain amounts assessed that represent compensation for services to be provided in future periods are reported as unearned revenue and recognized in income over the periods benefited. Surrender charges are recognized upon surrender of a contract by the contract holder in accordance with contractual terms.

For investment and interest-sensitive life insurance contracts, the amounts collected from contract holders are considered deposits and are not included in revenue.

Insurance Premiums

Our insurance premiums for traditional life insurance and group insurance products are recognized as revenue when due from the contract holder. Our traditional life insurance products include those products with fixed and guaranteed

premiums and benefits and consist primarily of whole life insurance, limited-payment life insurance, term life insurance and certain annuities with life contingencies. Our group non-medical insurance products consist primarily of term life, disability and dental.

120

Net Investment Income

Dividends and interest income, recorded in net investment income, are recognized when earned. Amortization of premiums and accretion of discounts on investments in debt securities are reflected in net investment income over the contractual terms of the investments in a manner that produces a constant effective yield.

For CLOs and MBS, included in the trading and AFS fixed maturity securities portfolios, we recognize income using a constant effective yield based on anticipated prepayments and the estimated economic life of the securities. When actual prepayments differ significantly from originally anticipated prepayments, the retrospective effective yield is recalculated to reflect actual payments to date and a catch up adjustment is recorded in the current period. In addition, the new effective yield, which reflects anticipated future payments, is used prospectively. Any adjustments resulting from changes in effective yield are reflected in net investment income on our Consolidated Statements of Comprehensive Income (Loss).

Realized Gain (Loss)

Realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss) includes realized gains and losses from the sale of investments, write-downs for other-than-temporary impairments of investments, certain derivative and embedded derivative gains and losses, gains and losses on the sale of subsidiaries and businesses and net gains and losses on reinsurance embedded derivatives and trading securities. Realized gains and losses on the sale of investments are determined using the specific identification method. Realized gain (loss) is recognized in net income, net of associated amortization of DAC, VOBA, DSI and DFEL. Realized gain (loss) is also net of allocations of investment gains and losses to certain contract holders and certain funds withheld on reinsurance arrangements for which we have a contractual obligation.

Other Revenues

Other revenues consists primarily of proceeds from reinsurance recaptures, fees attributable to broker-dealer services recorded as earned at the time of sale, changes in the market value of our seed capital investments and communications sales recognized as earned, net of agency and representative commissions.

Interest Credited

Interest credited includes interest credited to contract holder account balances. Interest crediting rates associated with funds invested in the general account of LNC's insurance subsidiaries during 2012 through 2014 ranged from 1% to

10%.

Benefits

Benefits for UL and other interest-sensitive life insurance products include benefit claims incurred during the period in excess of contract account balances. Benefits also include the change in reserves for life insurance products with secondary guarantee benefits, annuity products with guaranteed death and living benefits and certain annuities with life contingencies. For traditional life, group health and disability income products, benefits are recognized when incurred in a manner consistent with the related premium recognition policies.

Pension and Other Postretirement Benefit Plans

Pursuant to the accounting rules for our obligations to employees and agents under our various pension and other postretirement benefit plans, we are required to make a number of assumptions to estimate related liabilities and expenses. The mortality assumption is based on actual and anticipated plan experience, determined using acceptable actuarial methods. We use assumptions for the weighted-average discount rate and expected return on plan assets to estimate pension expense. The discount rate assumptions are determined using an analysis of current market information and the projected benefit flows associated with these plans. The expected long-term rate of return on plan assets is based on historical and projected future rates of return on the funds invested in the plan. The calculation of our accumulated postretirement benefit obligation also uses an assumption of weighted-average annual rate of increase in the per capita cost of covered benefits, which reflects a health care cost trend rate.

Stock-Based Compensation

In general, we expense the fair value of stock awards included in our incentive compensation plans. As of the date our stock awards are approved, the fair value of stock options is determined using a Black-Scholes options valuation methodology, and the fair value of other stock awards is based upon the market value of the stock. The fair value of the awards is expensed over the performance or service period, which generally corresponds to the vesting period, and is recognized as an increase to common stock in stockholders' equity. We classify certain stock awards as liabilities. For these awards, the settlement value is classified as a liability on our Consolidated Balance Sheets, and the liability is marked-to-market through net income at the end of each reporting period. Stock-based compensation expense is reflected in commissions and other expenses on our Consolidated Statements of Comprehensive Income (Loss).

Interest and Debt Expense

Interest expense on our short-term and long-term debt is recognized as due and any associated premiums, discounts and costs are amortized (accrued) over the term of the related borrowing utilizing the effective interest method. In addition, gains or losses related to certain derivative instruments associated with debt are recognized in interest and debt expense during the period of the change.

Income Taxes

We file a U.S. consolidated income tax return that includes all of our eligible subsidiaries. Ineligible subsidiaries file separate individual corporate tax returns. Subsidiaries operating outside of the U.S. are taxed, and income tax expense is recorded based on applicable foreign statutes. Deferred income taxes are recognized, based on enacted rates, when assets and liabilities have different values for financial statement and tax reporting purposes. A valuation allowance is recorded to the extent required. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, we consider many factors, including: the nature and character of the deferred tax assets and liabilities; taxable income in prior carryback years; future reversals of temporary differences; the length of time carryovers can be utilized; and any tax planning strategies we would employ to avoid a tax benefit from expiring unused.

Discontinued Operations

As of October 1, 2014, the results of operations of a component of the Company that either has been disposed of or is classified as held-for-sale are reported in income (loss) from discontinued operations, net of federal income taxes, if the disposal represents a strategic shift that has, or will have, a major effect on our consolidated financial condition and results of operations. See Note 2 for more information regarding the change to our discontinued operations policy. Prior to October 1, 2014, the results of operations of a component of the Company that either was disposed of or was classified as held-for-sale was reported in income (loss) from discontinued operations, net of federal income taxes, for all periods presented if the operations and cash flows of the component were or would be eliminated from our ongoing operations as a result of the disposal transaction and we did not have any significant continuing involvement in the operations.

Foreign Currency Translation

The balance sheet accounts and income statement items of foreign subsidiaries, reported in functional currencies other than the U.S. dollar are translated at the current and average exchange rates for the year, respectively. Resulting translation adjustments and other translation adjustments for foreign currency transactions that affect cash flows are

reported in AOCI, a component of stockholders' equity.

Earnings Per Share

Basic earnings per share ("EPS") is computed by dividing earnings available to common shareholders by the average common shares outstanding. Diluted EPS is computed assuming the conversion or exercise of dilutive convertible preferred securities, nonvested stock, stock options, performance share units and warrants outstanding during the year.

Our deferred compensation plans allow participants the option to diversify from LNC stock to other investment alternatives. When calculating our weighted-average dilutive shares, we presume the investment option will be settled in cash and exclude these shares from our calculation, unless the effect of settlement in shares would be more dilutive to our diluted EPS calculation.

For any period where a loss from continuing operations is experienced, shares used in the diluted EPS calculation represent basic shares because using diluted shares would be anti-dilutive to the calculation.

2. New Accounting Standards

Adoption of New Accounting Standards

The following table provides a description of our adoption of new Accounting Standard Updates (“ASUs”) issued by the FASB and the impact of the adoption on our financial statements:

Standard	Description	Date of Adoption	Effect on Financial Statements or Other Significant Matters
ASU 2011-06, Fees Paid to the Federal Government by Health Insurer	This standard addresses the recognition and classification of fees mandated by the Patient Protection and Affordable Care Act. The annual fee is imposed on health insurers for each calendar year beginning on or after January 1, 2014, and is payable no later than September 30 of the applicable year. If a fee payment is required, the insurer is required to record the liability in full with a corresponding deferred cost that is amortized to expense using a straight-line method of allocation over the applicable year. The ASU indicates that the annual fee does not meet the definition of an acquisition cost.	January 1, 2014	The amendments in this ASU did not have a material effect on our consolidated financial condition and results of operations.
ASU 2013-08, Amendments to the Scope, Measurement, and Disclosure Requirements (Topic 946, Investment Companies)	This standard provides comprehensive accounting guidance for assessing whether an entity is an investment company through the use of a new two-tiered approach; considering the entity’s purpose and design to determine whether the entity is an investment company. Upon adoption, all entities must be re-evaluated against the new investment company criteria to determine if investment company classification is permitted.	January 1, 2014	The adoption of this ASU did not have an effect on our consolidated financial condition and results of operations.
ASU 2013-11, Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists	This standard requires an entity to present unrecognized tax benefits as a reduction to a deferred tax asset for a net operating loss carryforward, a similar tax loss, or a tax credit carryforward. The standard defines specific exceptions when the unrecognized tax benefit should be presented in the financial statements as a liability and not combined with deferred tax assets.	January 1, 2014	The adoption of this ASU did not have an effect on the deferred tax asset or liability classification on our balance sheet and did not result in any additional disclosures to our financial statements.
ASU 2014-08, Reporting Discontinued Operations and Disclosures of	This standard changes the requirements for reporting discontinued operations. The disposal of a component of an entity must be reported as a discontinued operation if the disposal represents a strategic shift that has a major	Early adopted as of October 1, 2014	We applied the guidance in this standard to the sale of Lincoln Financial Media (“LFM”) in the

Disposals of
Components of an
Entity

effect on an entity's operations and financial results. The amendments also require entities to provide new disclosures about a disposal of an individually significant component of an entity that does not qualify for discontinued operations presentation. Early adoption is permitted, but only for disposals that have not been reported in financial statements previously issued or available for issuance.

fourth quarter of 2014. For more information regarding the sale of LFM, see Note 3.

Future Adoption of New Accounting Standards

The following table provides a description of future adoptions of new accounting standards that may have an impact on our financial statements when adopted:

Standard	Description	Projected Date of Adoption	Effect on Financial Statements or Other Significant Matters
ASU 2014-01, Accounting for Investments in Qualified Affordable Housing Projects	Under current GAAP, the use of the effective yield method for investments in qualified affordable housing projects is limited, and may result in certain investments being accounted for under a method of accounting that may not fairly represent the economics of the investment. This standard permits an entity to make an accounting policy election to use the proportional amortization method of accounting if certain conditions are met. The amendments are to be applied retrospectively for interim and annual reporting periods.	January 1, 2015	We are currently evaluating the impact of adopting this standard, and do not expect the adoption to have a material effect on our consolidated financial condition and results of operations.
ASU 2014-09, Revenue from Contracts with Customers	This standard establishes the core principle of recognizing revenue to depict the transfer of promised goods and services. The amendments define a five-step process that systematically identifies the various components of the revenue recognition process, culminating with the recognition of revenue upon satisfaction of an entity's performance obligation. Retrospective application is required, and early adoption is not permitted.	January 1, 2017	We will adopt the accounting guidance in this standard for non-insurance related products and services, and are currently evaluating the impact of adoption on our consolidated financial condition and results of operations.
ASU 2014-11, Repurchase-to-Maturity Transactions, Repurchase Financings and Disclosures	This standard eliminates a distinction in current GAAP related to certain repurchase agreements, and amends current GAAP to require repurchase-to-maturity transactions and linked repurchase financings to be accounted for as secured borrowings; consistent with the accounting for other repurchase agreements. The standard also includes new disclosure requirements related to transfers accounted for as sales that are economically similar to repurchase agreements. The new disclosures are not required for comparative periods before the effective date.	January 1, 2015	We are currently evaluating the impact of adopting this standard on our consolidated financial condition and results of operations and will provide the required disclosures, as necessary, in our first quarter 2015 consolidated financial statements.

<p>ASU 2014-16, Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share Is More Akin to Debt or to Equity</p>	<p>This standard clarifies that when considering the nature of the host contract in a hybrid financial instrument issued in the form of a share; an entity must consider all of the stated and implied substantive terms of the hybrid instrument, including the embedded derivative feature that is being considered for separate accounting from the host contract. Early adoption of this standard is permitted and application is under a modified retrospective basis to existing hybrid financial instruments that are within the scope of the standard.</p>	<p>January 1, 2016</p>	<p>We are currently evaluating the impact of adopting this standard on our consolidated financial condition and results of operations.</p>
<p>ASU 2015-02, Amendments to the Consolidation Analysis</p>	<p>This standard is intended to improve consolidation accounting guidance related to limited partnerships, limited liability corporations and securitization structures. The new standard includes changes to existing consolidation models that will eliminate the presumption that a general partner should consolidate a limited partnership, clarify when fees paid to a decision maker should be a factor in the VIE consolidation evaluation and reduce the VIE consolidation models from two to one by eliminating the indefinite deferral for certain investment funds. Early adoption is permitted including adoption in an interim period.</p>	<p>January 1, 2016</p>	<p>We are currently evaluating the impact of adopting this standard on our consolidated financial condition and results of operations.</p>

3. Dispositions

LFM

On December 7, 2014, we entered into a stock purchase agreement with Entercom Communications Corp. (“Entercom Parent”) and Entercom Radio, LLC (“Entercom”), pursuant to which we agreed to sell LFM to Entercom for \$105 million consisting of cash and perpetual cumulative convertible preferred stock of Entercom Parent. The transaction is subject to FCC, Hart-Scott-Rodino (“H-S-R”) and other customary regulatory approvals and closing conditions. As a result of a request for additional information under the H-S-R Act, closing may be delayed beyond the second quarter of 2015.

As of December 31, 2014, we adjusted the carrying amount of the assets and liabilities of LFM that will be sold to fair value less cost to sell and have reclassified such amounts as held-for-sale within other assets and other liabilities on our Consolidated Balance Sheets. Accordingly, we recognized a loss of \$28 million, after-tax, during the fourth quarter of 2014 reflected within income (loss) from continuing operations on our Consolidated Statements of Comprehensive Income (Loss).

Discontinued Investment Management Operations

On January 4, 2010, we closed on the stock sale of our subsidiary Delaware Management Holdings, Inc. (“Delaware”), which provided investment products and services to individuals and institutions, to Macquarie Bank Limited.

We reclassified the results of operations of Delaware into income (loss) from discontinued operations, net of federal income taxes, for all periods presented on our Consolidated Statements of Comprehensive Income (Loss), and selected amounts (in millions) were as follows:

For the Years
Ended December

	31,		
	2014	2013	2012
Disposal			
Gain (loss) on disposal, before federal income taxes	\$ 1	\$ -	\$ (1)
Federal income tax expense (benefit)	-	-	(28)
Gain (loss) on disposal	1	-	27
Income (loss) from discontinued operations	\$ 1	\$ -	\$ 27

The income from discontinued operations for the year ended December 31, 2012, related to the release of reserves associated with prior tax years that were closed out during the year and a purchase price adjustment associated with the termination of a portion of the investment advisory agreement with Delaware.

4. VIEs

Consolidated VIEs

Credit-Linked Notes

We have invested in the Class 1 notes of two credit-linked note (“CLN”) structures, which represent special purpose trusts combining ABS with credit default swaps to produce multi-class structured securities. The CLN structures also include subordinated Class 2 notes, which are held by third parties, and, together with the Class 1 notes, represent 100% of the outstanding notes of the CLN structures. The entities that issued the CLNs are financed by the note holders, and, as such, the note holders participate in the expected losses and residual returns of the entities.

Because the note holders do not have voting rights or similar rights, we determined the entities issuing the CLNs are VIEs, and as a note holder, our interest represented a variable interest. We have the power to direct the most significant activity affecting the performance of both CLN structures, as we have the ability to actively manage the reference portfolios underlying the credit default swaps. In addition, we receive returns from the CLN structures and may absorb losses that could potentially be significant to the CLN structures. As such, we concluded that we are the primary beneficiary of the VIEs associated with the CLNs. We reflect the assets and liabilities on our Consolidated Balance Sheets and recognize the results of operations of these VIEs on our Consolidated Statements of Comprehensive Income (Loss).

As a result of consolidating the CLNs, we also consolidate the derivative instruments in the CLN structures. The credit default swaps create variability in the CLN structures and expose the note holders to the credit risk of the referenced portfolio. The contingent forward contracts transfer a portion of the loss in the underlying fixed maturity corporate asset-backed credit card loan securities back to the counterparty after credit losses reach our attachment point.

The following summarizes information regarding the CLN structures (dollars in millions) as of December 31, 2014:

	Amount and Date of Issuance	
	\$400 December 2006	\$200 April 2007
Original attachment point (subordination)	5.50%	2.05%
Current attachment point (subordination)	4.21%	1.48%
Maturity	12/20/2016	3/20/2017
Current rating of tranche	BBB-	Ba2
Current rating of underlying reference obligations	AA - BB	AAA - CCC
Number of defaults in underlying reference obligations	3	2
Number of entities	123	99
Number of countries	20	21

There has been no event of default on the CLNs themselves. Based upon our analysis, the remaining subordination as represented by the attachment point should be sufficient to absorb future credit losses, subject to changing market conditions. Similar to other debt market instruments, our maximum principal loss is limited to our original investment.

The following summarizes the exposure of the CLN structures' underlying reference portfolios by industry and rating as of December 31, 2014:

AAA	AA	A	BBB	BB	B	CCC	Total
-----	----	---	-----	----	---	-----	-------

Industry								
Financial intermediaries	0.0%	2.1%	6.4%	2.1%	0.0%	0.0%	0.0%	10.6%
Telecommunications	0.0%	0.0%	3.5%	6.1%	1.4%	0.0%	0.0%	11.0%

Forest products	0.0%	0.0%	0.5%	1.1%	1.4%	0.0%	0.0%	3.0%
Other	0.0%	4.7%	14.2%	17.5%	5.5%	0.3%	0.3%	42.5%
Total	0.6%	14.1%	38.7%	36.9%	9.1%	0.3%	0.3%	100.0%

Statutory Trust Note

In August 2011, we purchased a \$100 million note issued by a statutory trust (“Issuer”) in a private placement offering. The proceeds were used by the Issuer to purchase U.S. government bonds to be held as collateral assets supporting an excess mortality swap. We concluded that the Issuer of the note was a VIE and that we were the primary beneficiary. We consolidated all of the assets and liabilities of the Issuer on our Consolidated Balance Sheets as of August 1, 2011.

On December 16, 2013, the excess mortality swap underlying this VIE was terminated as a result of a cancellation event under the associated swap agreement. Subsequently, the U.S. government bonds were redeemed on January 6, 2014, and our \$100 million note issued by the statutory trust was cancelled. The combination of these two events, under the direction of LNC and its counterparty, has provided for the dissolution of this VIE effective January 6, 2014. As such, we no longer have any exposure to loss related to this VIE.

Lincoln Financial Limited Liability Company I

In July 2013, we formed a new limited liability company, Lincoln Financial Limited Liability Company I (“LFLLCI”), and we became the sole equity owner of LFLLCI through our capital contribution. The activities of LFLLCI relate solely to our reinsurance subsidiary, the Lincoln Reinsurance Company of Vermont V, and primarily are to acquire, hold and issue notes as well as pay and collect interest on the notes. We concluded that LFLLCI is a VIE and that LNC is the primary beneficiary as we have the power to direct the most significant activities affecting the performance of LFLLCI. We do not expect the financial results of LFLLCI to have a material effect on our consolidated results of operations or financial condition.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Asset and liability information (dollars in millions) for the consolidated VIEs included on our Consolidated Balance Sheets was as follows:

	As of December 31, 2014			As of December 31, 2013		
	Number of Instruments	Notional Amounts	Carrying Value	Number of Instruments	Notional Amounts	Carrying Value
Assets						
Fixed maturity securities:

Contingent forwards	2	-	-	2	-	-
Total liabilities (2)	4	\$ 600	\$ 13	4	\$ 600	\$ 27

(1) Reported in variable interest entities' fixed maturity securities on our Consolidated Balance Sheets.

(2) Reported in variable interest entities' liabilities on our Consolidated Balance Sheets.

For details related to the fixed maturity AFS securities for these VIEs, see Note 5.

As described more fully in Note 1, we regularly review our investment holdings for OTTI. Based upon this review, we believe that the AFS fixed maturity securities were not other-than-temporarily impaired as of December 31, 2014.

The gains (losses) for the consolidated VIEs (in millions) recorded on our Consolidated Statements of Comprehensive Income (Loss) were as follows:

	For the Years Ended December 31,	
	2014	2013
Non-Qualifying Hedges		
Credit default swaps	\$ 14	\$ 101
Contingent forwards	-	-

Total non-qualifying hedges (1) \$ 14 \$ 101

(1) Reported in realized gain (loss) on our Consolidated Statements of Comprehensive Income (Loss).

Unconsolidated VIEs

Long-Term Senior Note

Effective December 31, 2010, we issued a \$500 million long-term senior note in exchange for a corporate bond AFS security of like

principal and duration from a non-affiliated VIE whose primary activities are to acquire, hold and issue notes and loans, as well as pay and collect interest on the notes and loans. We have concluded that we are not the primary beneficiary of this VIE because we do not have power over the activities that most significantly affect its economic performance. In addition, the terms of the senior note provide us with a set-off right to the corporate bond AFS security we purchased from the VIE; therefore, neither appears on our Consolidated Balance Sheets. We assigned the corporate bond AFS security to one of our subsidiaries and issued a guarantee to our subsidiary for the timely payment of the corporate bond's principal.

Effective September 30, 2014, we terminated our \$500 million long-term senior note financing arrangement and entered into a new transaction with the same non-affiliated VIE whose primary activities are to acquire, hold and issue notes and loans, pay and collect interest on the notes and loans, and enter into derivative instruments. Under this new transaction, we issued a \$697 million long-term senior note to the non-affiliated VIE in exchange for a corporate bond AFS security of like principal and duration that was assigned to one of our subsidiaries. The outstanding principal balance of this long-term senior note was \$712 million as of December 31, 2014, and it is variable in nature; moving concurrently with any variability in the face amount of the corporate bond AFS security up to a maximum amount of \$1.1 billion. We have concluded that we are not the primary beneficiary of the non-affiliated VIE because we do not have power over the activities that most significantly affect its economic performance. In addition, the terms of the senior note provide us with a set-off right with the corporate bond AFS security we purchased from the VIE; therefore, neither appears on our Consolidated

Balance Sheets. The VIE has entered into a total return swap with an unaffiliated third-party that supports any necessary principal funding of the corporate bond AFS security required by our subsidiaries while the security is outstanding.

Structured Securities

Through our investment activities, we make passive investments in structured securities issued by VIEs for which we are not the manager. These structured securities include our RMBS, CMBS, CLOs and CDOs. We have not provided financial or other support with respect to these VIEs other than our original investment. We have determined that we are not the primary beneficiary of these VIEs due to the relative size of our investment in comparison to the principal amount of the structured securities issued by the VIEs and the level of credit subordination that reduces our obligation to absorb losses or right to receive benefits. Our maximum exposure to loss on these structured securities is limited to the amortized cost for these investments. We recognize our variable interest in these VIEs at fair value on our Consolidated Balance Sheets. For information about these structured securities, see Note 5.

Qualified Affordable Housing Projects

We invest in certain LPs that operate qualified affordable housing projects that we concluded are VIEs. We receive returns from the LPs in the form of income tax credits, and our exposure to loss is limited to the capital we invest in the LPs. We are not the primary beneficiary of these VIEs as we do not have the power to direct the most significant activities of the LPs. Our maximum exposure to loss was \$60 million and \$77 million as of December 31, 2014 and 2013, respectively.

5. Investments

AFS Securities

Pursuant to the Fair Value Measurements and Disclosures Topic of the FASB ASC, we have categorized AFS securities into a three-level hierarchy, based on the priority of the inputs to the respective valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3), as described in Note 1, which also includes additional disclosures regarding our fair value measurements.

The amortized cost, gross unrealized gains, losses and OTTI and fair value of AFS securities (in millions) were as follows:

	As of December 31, 2014				Fair Value
	Amortized Cost	Gross Gains	Unrealized Losses	OTTI	
Fixed maturity securities:					
Corporate bonds	\$ 67,153	\$ 6,714	\$ 409	\$ 42	\$ 73,416
ABS	1,087	86	1	42	1,130
U.S. government bonds	379	56	-	-	435
Foreign government bonds	473	68	-	-	541
RMBS	3,979	268	3	18	4,226

VIEs' fixed maturity securities	682	15	-	-	697
Total fixed maturity securities	77,035	5,149	1,265	144	80,775
Equity securities	182	19	-	-	201
Total AFS securities	\$ 77,217	\$ 5,168	\$ 1,265	\$ 144	\$ 80,976

The amortized cost and fair value of fixed maturity AFS securities by contractual maturities (in millions) as of December 31, 2014, were as follows:

	Amortized Cost	Fair Value
Due in one year or less	\$ 2,258	\$ 2,309
Due after one year through five years	17,221	18,584
Due after five years through ten years	22,179	23,117
Due after ten years	32,630	37,657
Subtotal	74,288	81,667
MBS	4,533	4,796
CLOs	375	375
Total fixed maturity AFS securities	\$ 79,196	\$ 86,838

Actual maturities may differ from contractual maturities because issuers may have the right to call or pre-pay obligations.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

The fair value and gross unrealized losses, including the portion of OTTI recognized in OCI, of AFS securities (dollars in millions), aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position, were as follows:

	As of December 31, 2014					
	Less Than or Equal to Twelve Months		Greater Than Twelve Months		Total	Gross Unrealized Losses and OTTI
	Fair Value	Gross Unrealized Losses and OTTI	Fair Value	Gross Unrealized Losses and OTTI

For information regarding our investments in VIEs, see Note 4.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

We perform detailed analysis on the AFS securities backed by pools of residential and commercial mortgages that are most at risk of impairment based on factors discussed in Note 1. Selected information for these securities in a gross unrealized loss position (in millions) was as follows:

	As of December 31, 2014		
	Amortized Cost	Fair Value	Unrealized Loss
Total			
AFS securities backed by pools of residential mortgages	\$ 1,113	\$ 1,050	\$ 63
AFS securities backed by pools of commercial mortgages	151	140	11
Total	\$ 1,264	\$ 1,190	\$ 74
Subject to Detailed Analysis			
AFS securities backed by pools of residential mortgages	\$ 985	\$ 924	\$ 61
AFS securities backed by pools of commercial mortgages	13	12	1
Total	\$ 998	\$ 936	\$ 62

	As of December 31, 2013		
	Amortized Cost	Fair Value	Unrealized Loss
Total			
AFS securities backed by pools of residential mortgages	\$ 1,261	\$ 1,146	\$ 115
AFS securities backed by pools of commercial mortgages	193	169	24
Total	\$ 1,454	\$ 1,315	\$ 139
Subject to Detailed Analysis			
AFS securities backed by pools of residential mortgages	\$ 933	\$ 833	\$ 100
AFS securities backed by pools of commercial mortgages	29	24	5
Total	\$ 962	\$ 857	\$ 105

The fair value, gross unrealized losses, the portion of OTTI recognized in OCI (in millions) and number of AFS securities where the fair value had declined and remained below amortized cost by greater than 20% were as follows:

As of December 31, 2014

	Fair Value	Gross Unrealized Losses	OTTI (1)	Number of Securities
Less than six months	\$ 48	\$ 19	\$ -	12
Six months or greater, but less than nine months	8	7	-	3
Twelve months or greater	242	72	59	82
Total	\$ 298	\$ 98	\$ 59	97

As of December 31, 2013

	Fair Value	Gross Unrealized Losses	OTTI (1)	Number of Securities
Less than six months	\$ 1	\$ 1	\$ -	4
Six months or greater, but less than nine months	7	3	-	1
Nine months or greater, but less than twelve months	59	19	-	4
Twelve months or greater	349	92	81	92
Total	\$ 416	\$ 115	\$ 81	101

(1) We may reflect a security in more than one aging category based on various purchase dates.

We regularly review our investment holdings for OTTI. Our gross unrealized losses, including the portion of OTTI recognized in OCI, on AFS securities decreased \$836 million for the year ended December 31, 2014. As discussed further below, we believe the unrealized loss position as of December 31, 2014, did not represent OTTI as (i) we did not intend to sell these fixed maturity AFS securities; (ii) it is not more likely than not that we will be required to sell the fixed maturity AFS securities before recovery of their amortized cost basis; (iii) the estimated future cash flows were equal to or greater than the amortized cost basis of the debt securities; and (iv) we had the ability and intent to hold the equity AFS securities for a period of time sufficient for recovery.

Based upon this evaluation as of December 31, 2014, management believes we have the ability to generate adequate amounts of cash from our normal operations (e.g., insurance premiums and fees and investment income) to meet cash requirements with a prudent margin of safety without requiring the sale of our temporarily-impaired securities.

As of December 31, 2014, the unrealized losses associated with our corporate bond securities were attributable primarily to widening credit spreads and rising interest rates since purchase. We performed a detailed analysis of the financial performance of the underlying issuers and determined that we expected to recover the entire amortized cost for each security.

As of December 31, 2014, the unrealized losses associated with our MBS and ABS were attributable primarily to collateral losses and credit spreads. We assessed for credit impairment using a cash flow model that incorporates key assumptions including default rates, severities and prepayment rates. We estimated losses for a security by forecasting the underlying loans in each transaction. The forecasted loan performance was used to project cash flows to the various tranches in the structure, as applicable. Our forecasted cash flows also considered, as applicable, independent industry analyst reports and forecasts, sector credit ratings and other independent market data. Based upon our assessment of the expected credit losses of the security given the performance of the underlying collateral compared to our subordination or other credit enhancement, we expected to recover the entire amortized cost basis of each temporarily impaired security.

As of December 31, 2014, the unrealized losses associated with our hybrid and redeemable preferred securities were attributable primarily to wider credit spreads caused by illiquidity in the market and subordination within the capital structure, as well as credit risk of underlying issuers. For our hybrid and redeemable preferred securities, we evaluated the financial performance of the underlying issuers based upon credit performance and investment ratings and determined that we expected to recover the entire amortized cost of each security.

Changes in the amount of credit loss of OTTI recognized in net income (loss) where the portion related to other factors was recognized in OCI (in millions) on fixed maturity AFS securities were as follows:

	For the Years Ended December 31,		
	2014	2013	2012
Balance as of beginning-of-year	\$ 404	\$ 424	\$ 390
Increases attributable to:			
Credit losses on securities for which an OTTI was not previously recognized	4	39	108
Credit losses on securities for which an OTTI was previously recognized	16	43	62
Decreases attributable to:			
Securities sold, paid down or matured	(44)	(102)	(136)

Balance as of end-of-year \$ 380 \$ 404 \$ 424

During 2014, 2013 and 2012, we recorded credit losses on securities for which an OTTI was not previously recognized as we determined the cash flows expected to be collected would not be sufficient to recover the entire amortized cost basis of the debt security. The credit losses we recorded on securities for which an OTTI was not previously recognized were attributable primarily to one or a combination of the following reasons:

- Failure of the issuer of the security to make scheduled payments;
- Deterioration of creditworthiness of the issuer;
- Deterioration of conditions specifically related to the security;
- Deterioration of fundamentals of the industry in which the issuer operates; and
- Deterioration of the rating of the security by a rating agency.

We recognize the OTTI attributed to the noncredit portion as a separate component in OCI referred to as unrealized OTTI on AFS securities.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Details of the amount of credit loss of OTTI recognized in net income (loss) for which a portion related to other factors was recognized in OCI (in millions), were as follows:

As of December 31, 2014					
	Gross Unrealized Losses			Fair Value	OTTI in Credit Losses
	Amortized Cost	Gains	and OTTI		
Corporate bonds	\$ 38	\$ 5	\$ 9	\$ 34	\$ 20

Total	\$ 850	\$ 40	\$ 79	\$ 811	\$ 404

Trading Securities

Trading securities at fair value (in millions) consisted of the following:

	As of December	
	31,	
	2014	2013
Fixed maturity securities:		
Corporate bonds	\$ 1,528	\$ 1,738
ABS	32	33
U.S. government bonds	278	272
Foreign government bonds	25	24
RMBS	135	155
CMBS	4	7
CLOs	9	2
State and municipal bonds	22	21
Hybrid and redeemable preferred securities	32	30
Total trading securities	\$ 2,065	\$ 2,282

The portion of the market adjustment for gains (losses) that relate to trading securities still held as of December 31, 2014, 2013 and 2012, was \$45 million, \$(172) million and \$53 million, respectively.

Mortgage Loans on Real Estate

Mortgage loans on real estate principally involve commercial real estate. The commercial loans are geographically diversified throughout the U.S. with the largest concentrations in California and Texas, which accounted for 23% and 9%, respectively, of mortgage loans on real estate as of December 31, 2014 and 2013.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

The following provides the current and past due composition of our mortgage loans on real estate (in millions):

	As of December 31,	
	2014	2013
Current	\$ 7,565	\$ 7,200
60 to 90 days past due	-	4
Greater than 90 days past due	8	3
Valuation allowance associated with impaired mortgage loans on real estate	(3)	(3)
Unamortized premium (discount)	4	6
Total carrying value	\$ 7,574	\$ 7,210

The number of impaired mortgage loans on real estate, each of which had an associated specific valuation allowance, and the carrying value of impaired mortgage loans on real estate (dollars in millions) were as follows:

	As of December 31,	
	2014	2013
Number of impaired mortgage loans on real estate	3	3
Principal balance of impaired mortgage loans on real estate	\$ 26	\$ 27
Valuation allowance associated with impaired mortgage loans on real estate	(3)	(3)
Carrying value of impaired mortgage loans on real estate	\$ 23	\$ 24

The changes in the valuation allowance associated with impaired mortgage loans on real estate (in millions) were as follows:

	As of December 31,		
	2014	2013	2012
Balance as of beginning-of-year	\$ 3	\$ 21	\$ 31
Additions	-	3	14

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

Charge-offs, net of recoveries	-	(21)	(24)
Balance as of end-of-year	\$ 3	\$ 3	\$ 21

The average carrying value on the impaired mortgage loans on real estate (in millions) was as follows:

	For the Years Ended December 31,		
	2014	2013	2012
Average carrying value for impaired mortgage loans on real estate	\$ 24	\$ 34	\$ 51
Interest income recognized on impaired mortgage loans on real estate	2	2	1
Interest income collected on impaired mortgage loans on real estate	2	2	1

As described in Note 1, we use the loan-to-value and debt-service coverage ratios as credit quality indicators for our mortgage loans, which were as follows (dollars in millions):

	As of December 31, 2014			As of December 31, 2013		
	Carrying Value	% of Total	Debt-Service Coverage Ratio	Carrying Value	% of Total	Debt-Service Coverage Ratio
Less than 65%	\$ 6,596	87.1%	1.90	\$ 6,032	83.7%	1.78
65% to 74%	631	8.3%	1.55	745	10.3%	1.42
75% to 100%	316	4.2%	0.77	402	5.6%	0.83
Greater than 100%	31	0.4%	0.77	31	0.4%	0.78
Total mortgage loans on real estate	\$ 7,574	100.0%		\$ 7,210	100.0%	

Alternative Investments

As of December 31, 2014 and 2013, alternative investments included investments in 156 and 121 different partnerships, respectively, and the portfolio represented approximately 1% of our overall invested assets.

134

Net Investment Income

The major categories of net investment income (in millions) on our Consolidated Statements of Comprehensive Income (Loss) were as follows:

	For the Years Ended		
	December 31,		
	2014	2013	2012
Fixed maturity AFS securities	\$ 4,041	\$ 3,976	\$ 3,910
Equity AFS securities	9	6	6

Determination of Credit Losses on Corporate Bonds and ABS

As of December 31, 2014 and 2013, we reviewed our corporate bond and ABS portfolios for potential shortfall in contractual principal and interest based on numerous subjective and objective inputs. The factors used to determine the amount of credit loss for each individual security, include, but are not limited to, near term risk, substantial discrepancy between book and market value, sector or company-specific volatility, negative operating trends and trading levels wider than peers.

Credit ratings express opinions about the credit quality of a security. Securities rated investment grade, that is those rated BBB- or higher by Standard & Poor's ("S&P") Rating Services or Baa3 or higher by Moody's Investors Service ("Moody's"), are generally considered by the rating agencies and market participants to be low credit risk. As of December 31, 2014 and 2013, 96% of the fair value of our corporate bond portfolio was rated investment grade. As of December 31, 2014 and 2013, the portion of our corporate bond portfolio rated below investment grade had an amortized cost of \$3.3 billion and \$2.7 billion, respectively, and a fair value of \$3.2 billion and \$2.7 billion, respectively. As of December 31, 2014 and 2013, 88% and 84%, respectively, of the fair value of our ABS portfolio was rated investment grade. As of December 31, 2014 and 2013, the portion of our ABS portfolio rated below

investment grade had an amortized cost of \$193 million and \$273 million, respectively, and a fair value of \$176 million and \$226 million, respectively. Based upon the analysis discussed above, we believed as of December 31, 2014 and 2013, that we would recover the amortized cost of each investment grade corporate bond and ABS security.

Determination of Credit Losses on MBS

As of December 31, 2014 and 2013, default rates were projected by considering underlying MBS loan performance and collateral type. Projected default rates on existing delinquencies vary between 10% to 100% depending on loan type and severity of delinquency status. In addition, we estimate the potential contributions of currently performing loans that may become delinquent in the future based on the change in delinquencies and loan liquidations experienced in the recent history. Finally, we develop a default rate timing curve by aggregating the defaults for all loans in the pool (delinquent loans, foreclosure and real estate owned and new delinquencies from currently performing loans) and the associated loan-level loss severities.

We use certain available loan characteristics such as lien status, loan sizes and occupancy to estimate the loss severity of loans. Second lien loans are assigned 100% severity, if defaulted. For first lien loans, we assume a minimum of 30% severity with higher severity assumed for investor properties and further adjusted by housing price assumptions. With the default rate timing curve and loan-level severity, we derive the future expected credit losses.

Payables for Collateral on Investments

The carrying value of the payables for collateral on investments (in millions) included on our Consolidated Balance Sheets and the fair value of the related investments or collateral consisted of the following:

	As of December 31, 2014		As of December 31, 2013	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Collateral payable for derivative investments (1)	\$ 1,673	\$ 1,673	\$ 638	\$ 638
Securities pledged under securities lending agreements (2)	204	196	184	178
Securities pledged under repurchase agreements (3)	607	666	530	553
Securities pledged for Term ABS Loan Facility ("TALF") (4)	-	-	36	49
Investments pledged for Federal Home Loan Bank of Indianapolis ("FHLBI") (5)	1,925	3,151	1,850	3,127
Total payables for collateral on investments	\$ 4,409	\$ 5,686	\$ 3,238	\$ 4,545

(1) We obtain collateral based upon contractual provisions with our counterparties. These agreements take into consideration the counterparties' credit rating as compared to ours, the fair value of the derivative investments and specified thresholds that if exceeded result in the receipt of cash that is typically invested in cash and invested cash. See Note 6 for additional information.

(2) Our pledged securities under securities lending agreements are included in fixed maturity AFS securities on our Consolidated Balance Sheets. We generally obtain collateral in an amount equal to 102% and 105% of the fair value of the domestic and foreign securities, respectively. We value collateral daily and obtain additional collateral when deemed appropriate. The cash received in our securities lending program is typically invested in cash and invested cash or fixed maturity AFS securities.

(3) Our pledged securities under repurchase agreements are included in fixed maturity AFS securities on our Consolidated Balance Sheets. We obtain collateral in an amount equal to 95% of the fair value of the securities, and our agreements with third parties contain contractual provisions to allow for additional collateral to be obtained when necessary. The cash received in our repurchase program is typically invested in fixed maturity AFS securities.

(4) Our pledged securities for TALF are included in fixed maturity AFS securities on our Consolidated Balance Sheets. We obtain collateral in an amount that has typically averaged 90% of the fair value of the TALF securities. The cash received in these transactions is invested in fixed maturity AFS securities.

(5) Our pledged investments for FHLBI are included in fixed maturity AFS securities and mortgage loans on real estate on our Consolidated Balance Sheets. The collateral requirements are generally 105% to 115% of the fair value for fixed maturity AFS securities and 155% to 175% of the fair value for mortgage loans on real estate. The cash received in these transactions is primarily invested in cash and invested cash or fixed maturity AFS securities.

Increase (decrease) in payables for collateral on investments (in millions) consisted of the following:

	For the Years Ended		
	December 31,		
	2014	2013	2012
Collateral payable for derivative investments	\$ 1,035	\$ (1,929)	\$ (413)
Securities pledged under securities lending agreements	20	(13)	(3)
Securities pledged under repurchase agreements	77	250	-
Securities pledged for TALF	(36)	(1)	(136)
Investments pledged for FHLBI	75	750	1,000
Total increase (decrease) in payables for collateral on investments	\$ 1,171	\$ (943)	\$ 448

Investment Commitments

As of December 31, 2014, our investment commitments were \$1.4 billion, which included \$615 million of LPs, \$388 million of private placement securities and \$372 million of mortgage loans on real estate.

Concentrations of Financial Instruments

As of December 31, 2014 and 2013, our most significant investments in one issuer were our investments in securities issued by the Federal Home Loan Mortgage Corporation with a fair value of \$2.2 billion and \$2.6 billion, respectively, or 2% and 3% of our invested assets portfolio, respectively, and our investments in securities issued by Fannie Mae with a fair value of \$1.4 billion and \$1.7 billion, respectively, or 1% and 2%, respectively, of our invested assets portfolio. These investments are included in corporate bonds in the tables above.

As of December 31, 2014 and 2013, our most significant investments in one industry were our investment securities in the utilities industry with a fair value of \$12.8 billion and \$10.9 billion, respectively, or 13% and 12%, respectively, of our invested assets portfolio, and our investment securities in the consumer non-cyclical industry with a fair value of \$11.7 billion and \$10.7 billion, respectively, or 11% of our invested assets portfolio. These concentrations include both AFS and trading securities.

6. Derivative Instruments

We maintain an overall risk management strategy that incorporates the use of derivative instruments to minimize significant unplanned fluctuations in earnings that are caused by interest rate risk, foreign currency exchange risk, equity market risk, default risk, basis risk and credit risk. We assess these risks by continually identifying and monitoring changes in our exposures that may adversely affect expected future cash flows and by evaluating hedging opportunities.

Derivative activities are monitored by various management committees. The committees are responsible for overseeing the implementation of various hedging strategies that are developed through the analysis of financial simulation models and other internal and industry sources. The resulting hedging strategies are incorporated into our overall risk management strategies.

See Note 1 for a detailed discussion of the accounting treatment for derivative instruments. See Note 21 for additional disclosures related to the fair value of our derivative instruments and Note 4 for derivative instruments related to our consolidated VIEs.

Interest Rate Contracts

We use derivative instruments as part of our interest rate risk management strategy. These instruments are economic hedges unless otherwise noted and include:

Consumer Price Index Swaps

We use consumer price index swaps to hedge the liability exposure on certain options in fixed annuity products. Consumer price index swaps are contracts entered into at no cost and whose payoff is the difference between the consumer price index inflation rate and the fixed-rate determined as of inception.

Forward-Starting Interest Rate Swaps

We use forward-starting interest rate swaps designated and qualifying as cash flow hedges to hedge our exposure to interest rate fluctuations related to the forecasted purchases of certain assets and liabilities and anticipated issuances of fixed-rate securities.

Interest Rate Cap Corridors

We use interest rate cap corridors to provide a level of protection from the effect of rising interest rates for certain life insurance products and annuity contracts. Interest rate cap corridors involve purchasing an interest rate cap at a specific cap rate and selling an interest rate cap with a higher cap rate. For each corridor, the amount of quarterly payments, if any, is determined by the rate at which the underlying index rate resets above the original capped rate. The corridor limits the benefit the purchaser can receive as the related interest rate index rises above the higher capped rate. There is no additional liability to us other than the purchase price associated with the interest rate cap corridor.

Interest Rate Futures

We use interest rate futures contracts to hedge the liability exposure on certain options in variable annuity products. These futures contracts require payment between our counterparty and us on a daily basis for changes in the futures index price.

Interest Rate Swap Agreements

We use interest rate swap agreements to hedge the liability exposure on certain options in variable annuity products.

We also use interest rate swap agreements designated and qualifying as cash flow hedges. These instruments either hedge the interest rate risk of floating-rate bond coupon payments by replicating a fixed-rate bond, or hedge our exposure to fixed-rate bond coupon payments and the change in the underlying asset values as interest rates fluctuate.

Finally, we use interest rate swap agreements designated and qualifying as fair value hedges to hedge against changes in the value of anticipated transactions and commitments as interest rates fluctuate.

Treasury and Reverse Treasury Locks

We use treasury locks designated and qualifying as cash flow hedges to hedge the interest rate exposure related to our issuance of fixed-rate securities or the anticipated future cash flows of floating-rate fixed maturity securities due to changes in interest rates. In addition, we use reverse treasury locks designated and qualifying as cash flow hedges to hedge the interest rate exposure related to the purchase of fixed-rate securities or the anticipated future cash flows of floating-rate fixed maturity securities due to changes in interest rates. These derivatives are primarily structured to hedge interest rate risk inherent in the assumptions used to price certain liabilities.

Foreign Currency Contracts

We use derivative instruments as part of our foreign currency risk management strategy. These instruments are economic hedges unless otherwise noted and include:

Currency Futures

We use currency futures to hedge foreign exchange risk associated with certain options in variable annuity products. Currency futures exchange one currency for another at a specified date in the future at a specified exchange rate.

Foreign Currency Swaps

We use foreign currency swaps designated and qualifying as cash flow hedges, which are traded over-the-counter, to hedge some of the foreign exchange risk of investments in fixed maturity securities denominated in foreign currencies. A foreign currency swap is a contractual agreement to exchange the currencies of two different countries at a specified rate of exchange in the future.

Equity Market Contracts

We use derivative instruments as part of our equity market risk management strategy that are economic hedges and include:

Call Options Based on the S&P 500 Index®

We use indexed annuity contracts to permit the holder to elect an interest rate return or an equity market component, where interest credited to the contracts is linked to the performance of the S&P 500 Index® (“S&P 500”). Contract holders may elect to rebalance index options at renewal dates, either annually or biannually. As of each renewal date, we have the opportunity to re-price the indexed component by establishing participation rates, caps, spreads and specified rates, subject to contractual guarantees. We purchase call options that are highly correlated to the portfolio allocation decisions of our contract holders, such that we are economically hedged with respect to equity returns for the current reset period.

Equity Futures

We use equity futures contracts to hedge the liability exposure on certain options in variable annuity products. These futures contracts require payment between our counterparty and us on a daily basis for changes in the futures index price.

Put Options

We use put options to hedge the liability exposure on certain options in variable annuity products. Put options are contracts that require counterparties to pay us at a specified future date the amount, if any, by which a specified equity index is less than the strike rate stated in the agreement, applied to a notional amount.

Total Return Swaps

We use total return swaps to hedge the liability exposure on certain options in variable annuity products. We receive the total return on a portfolio of indexes and pay a floating-rate of interest.

In addition, we use total return swaps to hedge a portion of the liability related to our deferred compensation plans. We receive the total return on a portfolio of indexes and pay a floating-rate of interest.

Variance Swaps

We use variance swaps to hedge the liability exposure on certain options in variable annuity products. Variance swaps are contracts entered into at no cost and whose payoff is the difference between the realized variance rate of an underlying index and the fixed variance rate determined as of inception.

Credit Contracts

We use derivative instruments as part of our credit risk management strategy that are economic hedges and include:

Credit Default Swaps – Selling Protection

We sell credit default swaps to offer credit protection to contract holders and investors. The credit default swaps hedge the contract holders and investors against a drop in bond prices due to credit concerns of certain bond issuers. A credit default swap allows the investor to put the bond back to us at par upon a default event by the bond issuer. A default event is defined as bankruptcy, failure to pay, obligation acceleration or restructuring.

Embedded Derivatives

We have embedded derivatives that include:

GLB Reserves Embedded Derivatives

We use a hedging strategy designed to mitigate the risk and income statement volatility caused by changes in the equity markets, interest rates and volatility associated with GLBs offered in our variable annuity products, including products with GWB and GIB features. The hedging strategy is designed such that changes in the value of the hedge contracts due to changes in equity markets, interest rates and implied volatilities move in the opposite direction of changes in embedded derivative GLB reserves caused by those same factors. We rebalance our hedge positions based upon changes in these factors as needed. While we actively manage our hedge positions, these hedge positions may not be totally effective in offsetting changes in the embedded derivative reserve due to, among other things, differences in timing between when a market exposure changes and corresponding changes to the hedge positions, extreme swings in the equity markets and interest rates, market volatility, contract holder behavior, divergence between the performance of the underlying funds and the hedging indices, divergence between the actual and expected performance of the hedge instruments and our ability to purchase hedging instruments at prices consistent with our desired risk and return trade-off.

Certain features of these guarantees have elements of both insurance benefits accounted for under the Financial Services – Insurance – Claim Costs and Liabilities for Future Policy Benefits Subtopic of the FASB ASC (“benefit reserves”) and embedded derivatives accounted for under the Derivatives and Hedging and the Fair Value Measurements and Disclosures Topics of the FASB ASC (“embedded derivative reserves”). We calculate the value of the embedded derivative reserve and the benefit reserve based on the specific characteristics of each GLB feature.

Indexed Annuity and IUL Contracts Embedded Derivatives

We distribute indexed annuity and IUL contracts that permit the holder to elect an interest rate return or an equity market component, where interest credited to the contracts is linked to the performance of the S&P 500. Contract holders may elect to rebalance index options at renewal dates, either annually or biannually. As of each renewal date, we have the opportunity to re-price the indexed component by establishing participation rates, caps, spreads and specified rates, subject to contractual guarantees. We purchase S&P 500 call options that are highly correlated to the portfolio allocation decisions of our contract holders, such that we are economically hedged with respect to equity returns for the current reset period.

Reinsurance Related Embedded Derivatives

We have certain modified coinsurance arrangements and coinsurance with funds withheld reinsurance arrangements with embedded derivatives related to the withheld assets of the related funds. These derivatives are considered total return swaps with contractual returns that are attributable to various assets and liabilities associated with these reinsurance arrangements.

Edgar Filing: LINCOLN NATIONAL CORP - Form 10-K

We have derivative instruments with off-balance-sheet risks whose notional or contract amounts exceed the related credit exposure. Outstanding derivative instruments with off-balance-sheet risks (in millions) were as follows:

	As of December 31, 2014			As of December 31, 2013
