Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

Note 1. Organization and Nature of Operations

Noble Energy, Inc. (Noble Energy, we or us) is a leading independent energy company engaged in worldwide crude oil and natural gas exploration and production. Our core operating areas are onshore US, primarily in the DJ Basin and Marcellus Shale, in the deepwater Gulf of Mexico, offshore Eastern Mediterranean, and offshore West Africa.

Note 2. Basis of Presentation

**Presentation** The accompanying unaudited consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the US (US GAAP) for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and notes required by US GAAP for complete financial statements. The accompanying consolidated financial statements at March 31, 2015 and December 31, 2014 and for the three months ended March 31, 2015 and 2014 contain all normally recurring adjustments considered necessary for a fair presentation of our financial position, results of operations, cash flows and shareholders' equity for such periods. Certain prior-period amounts have been reclassified to conform to the current-period presentation. Operating results for the three months ended March 31, 2015 are not necessarily indicative of the results that may be expected for the year ending December 31, 2015. These consolidated financial statements should be read in conjunction with the consolidated financial statements and accompanying notes included in our Annual Report on Form 10-K for the year ended December 31, 2014.

**Consolidation** Our consolidated accounts include our accounts and the accounts of our wholly-owned subsidiaries. In addition, we use the equity method of accounting for investments in entities that we do not control but over which we exert significant influence. All significant intercompany balances and transactions have been eliminated upon consolidation.

**Equity Offering** On March 3, 2015, we closed an underwritten public offering of 21,000,000 shares of common stock, par value \$0.01 per share, at a price to the public of \$47.50 per share. In addition, on March 25, 2015, we completed the issuance of an additional 3,150,000 shares of common stock, par value \$0.01 per share, in connection with the exercise of the option of the underwriters to purchase additional shares of common stock. The aggregate net proceeds of the offerings were approximately \$1.1 billion (after deducting underwriting discounts and commissions and estimated offering expenses). We used approximately \$150 million of the net proceeds to repay outstanding indebtedness under our revolving credit facility and the remainder will be used for general corporate purposes, including the funding of our capital investment program.

**Increase in Authorized Shares** On April 28, 2015, our stockholders approved an amendment to our Certificate of Incorporation to increase the number of authorized shares of our common stock from 500 million to 1 billion.

**Update on Core Area – Israel** In March 2014, we and our partners reached an agreement with the Israel Antitrust Authority on various matters (Consent Decree). The Consent Decree, which was subject to final approval by the Antitrust Tribunal, granted the rights, to us and our partners, to jointly market natural gas from the Leviathan field. Also, as a result of the Consent Decree, we agreed to divest our Tanin and Karish natural gas discoveries.

However, on December 23, 2014, we and our partners in the Leviathan field were advised by the Israel Antitrust Authority of its decision to not submit the Consent Decree to the Antitrust Tribunal for final approval. This is a matter that we believed was resolved some time ago and we had received assurances from the Antitrust Authority that approval was forthcoming. We requested an oral hearing with the Antitrust Authority, which took place on January 27, 2015, and await final disposition.

In the meantime, negotiations are ongoing with the Antitrust Authority and with an inter-ministerial working group, established by the Prime Minister's office for the purpose of agreeing to a comprehensive regulatory framework for investment. We remain prepared to implement the Consent Decree if agreed with the Antitrust Authority but in any case, expect that divestiture of Tanin and Karish will be part of a final regulatory settlement. We therefore continue to hold these assets for sale.

Recently Issued Accounting Standards In April 2015, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update No. 2015-03 (ASU 2015-03): Simplifying the Presentation of Debt Issuance Costs, effective for annual and interim periods beginning after December 15, 2015. ASU 2015-03 requires that all costs incurred to issue debt be presented in the balance sheet as a direct deduction from the carrying value of the debt. It is effective retrospectively for first quarter 2016 and is only expected to impact the presentation of our consolidated balance sheet. As of March 31, 2015 and December 31, 2014, we had \$48 million and \$50 million of capitalized, unamortized debt issuance costs, respectively.

In February 2015, the FASB issued Accounting Standards Update No. 2015-02 (ASU 2015-02): Consolidation - Amendments to the Consolidation Analysis, effective for annual and interim periods beginning after December 15, 2015. ASU 2015-02 changes the guidance as to whether an entity is a variable interest entity (VIE) or a voting interest entity and how related parties

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

are considered in the VIE model. We are currently evaluating the provisions of ASU 2015-02 and assessing the impact, if any, it may have on our financial position and results of operations.

In May 2014, the FASB issued Accounting Standards Update No. 2014-09 (ASU 2014-09), which creates Topic 606, Revenue from Contracts with Customers, and supersedes the revenue recognition requirements in Topic 605, Revenue Recognition, including most industry-specific revenue recognition guidance throughout the Industry Topics of the Codification. In addition, ASU 2014-09 supersedes the cost guidance in Subtopic 605-35, Revenue Recognition - Construction-Type and Production-Type Contracts, and creates new Subtopic 340-40, Other Assets and Deferred Costs - Contracts with Customers. In summary, the core principle of Topic 606 is that an entity recognizes revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. Additionally, ASU 2014-09 requires enhanced financial statement disclosures over revenue recognition as part of the new accounting guidance. The amendments in ASU 2014-09 are effective for annual reporting periods beginning after December 15, 2016, including interim periods within that reporting period, and early application is not permitted. In April 2015, the FASB proposed to delay the effective date for one year, for annual reporting periods beginning after December 15, 2017. The proposal will be subject to the FASB's due process requirement. We are currently evaluating the provisions of ASU 2014-09 and awaiting implementation guidance to determine the impact, if any, it may have on our financial position and results of operations.

**Estimates** The preparation of consolidated financial statements in conformity with US GAAP requires us to make a number of estimates and assumptions relating to the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ significantly from those estimates. Management evaluates estimates and assumptions on an ongoing basis using historical experience and other factors, including the current economic and commodity price environment.

**Statements of Operations Information** Other statements of operations information is as follows:

(millions)	Three Months Ended	
	March 31,	
	2015	2014
Production Expense		
Lease Operating Expense	\$157	\$142

<sup>(1)</sup> Assets held for sale includes \$76 million related to our Tanin and Karish natural gas discoveries, offshore Israel. See Update on Core Area – Israel, above.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

## Note 3. Divestitures

**Onshore US Properties** During the first three months of 2015, we sold certain onshore US crude oil and natural gas leases. Properties sold generated net proceeds of \$119 million, which were applied to the DJ Basin depletable field, with no recognition of gain or loss.

Information regarding assets sold during the first three months of 2014 is as follows:

(millions)	Three Months Ended March 31, 2014	
Sales Proceeds	\$92	
Less		
Net Book Value of Assets Sold	(106	)
Goodwill Allocated to Assets Sold	(6	)
Asset Retirement Obligations Associated with Assets Sold	20	
Other Closing Adjustments	(1	)
Gain on Divestitures	\$(1	)

## Note 4. Asset Impairments

Pre-tax (non-cash) asset impairment charges were as follows:

(millions)	Three Months Ended March 31,	
	2015	2014
Deepwater Gulf of Mexico	3	—
Eastern Mediterranean	24	—
North Sea	—	92
Non-Core US Property	—	5
Total	\$27	\$97

Impairments for 2015 were related to facility costs at South Raton (Deepwater Gulf of Mexico) and increases in expected field abandonment costs for the Noa and Pinnacles fields (Eastern Mediterranean).

Impairments for 2014 were primarily related to an increase in expected field abandonment costs and a change in the timing of abandonment activities at the MacCulloch North Sea field.

See [Note 2](#). Basis of Presentation, [Note 7](#). Fair Value Measurements and Disclosures and [Note 9](#). Asset Retirement Obligations.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

## Note 5. Derivative Instruments and Hedging Activities

**Objective and Strategies for Using Derivative Instruments** We are exposed to fluctuations in crude oil and natural gas prices on the majority of our production. In order to mitigate the effect of commodity price volatility and enhance the predictability of cash flows relating to the marketing of our global crude oil and domestic natural gas, we enter into crude oil and natural gas price hedging arrangements with respect to a portion of our expected production.

While these instruments mitigate the cash flow risk of future decreases in commodity prices, they may also curtail benefits from future increases in commodity prices. See Note 7. Fair Value Measurements and Disclosures for a discussion of methods and assumptions used to estimate the fair values of our derivative instruments.

**Unsettled Commodity Derivative Instruments** As of March 31, 2015, we had entered into the following crude oil derivative instruments:

Settlement Period	Type of Contract	Index	Bbls Per Day	Swaps	Collars		
				Weighted Average Fixed Price	Weighted Average Short Put Price	Weighted Average Floor Price	Weighted Average Ceiling Price
Instruments Entered Into as of March 31, 2015							
2015	Swaps	NYMEX WTI	27,000	\$88.80	\$—	\$—	\$—
2015	Swaps	Dated Brent	8,000	100.31	—	—	—
2015	Two-Way Collars	NYMEX WTI	5,000	—	—	50.00	64.94
2015	Three-Way Collars	NYMEX WTI	20,000	—	70.50	87.55	94.41
2015	Three-Way Collars	Dated Brent	13,000	—	76.92	96.00	108.49
2016	Swaps	NYMEX WTI	6,000	87.95	—	—	—
2016	Swaps	Dated Brent	9,000	97.96	—	—	—
2016	Three-Way Collars	NYMEX WTI	6,000	—	61.00	72.50	86.37
2016	Three-Way Collars	Dated Brent	8,000	—	72.50	86.25	101.79

As of March 31, 2015, we had entered into the following natural gas derivative instruments:

Settlement Period	Type of Contract	Index	MMBtu Per Day	Swaps	Collars		
				Weighted Average Fixed Price	Weighted Average Short Put Price	Weighted Average Floor Price	Weighted Average Ceiling Price
Instruments Entered Into as of March 31, 2015							
2015	Swaps	NYMEX HH	140,000	\$4.30	\$—	\$—	\$—
2015	Three-Way Collars	NYMEX HH	150,000	—	3.58	4.25	5.04
2016	Swaps <sup>(1)</sup>	NYMEX HH	40,000	3.60	—	—	—
2016	Two-Way Collars	NYMEX HH	30,000	—	—	3.00	3.50
2016	Three-Way Collars	NYMEX HH	60,000	—	2.88	3.50	4.03

We have entered into natural gas derivative contracts which give counterparties the option to extend for an additional 12-month period. Options covering a notional volume of 30,000 MMBtu/d are exercisable on December

<sup>(1)</sup> 22 and 23, 2016. If the counterparties exercise all such options, the notional volume of our existing natural gas derivative contracts will increase by 30,000 MMBtu/d at an average price of \$3.50 per MMBtu for each month during the period January 1, 2017 through December 31, 2017.

## Note 6. Debt

Debt consists of the following:

(millions, except percentages)	March 31, 2015		December 31, 2014	
	Debt	Interest Rate	Debt	Interest Rate
Credit Facility, due October 3, 2018	\$—	— %	\$—	— %
Capital Lease and Other Obligations	419	— %	413	— %
8.25% Senior Notes, due March 1, 2019	1,000	8.25 %	1,000	8.25 %
4.15% Senior Notes, due December 15, 2021	1,000	4.15 %	1,000	4.15 %
7.25% Senior Notes, due October 15, 2023	100	7.25 %	100	7.25 %
3.90% Senior Notes, due November 15, 2024	650	3.90 %	650	3.90 %
8.00% Senior Notes, due April 1, 2027	250	8.00 %	250	8.00 %
6.00% Senior Notes, due March 1, 2041	850	6.00 %	850	6.00 %
5.25% Senior Notes, due November 15, 2043	1,000	5.25 %	1,000	5.25 %
5.05% Senior Notes, due November 15, 2044	850	5.05 %	850	5.05 %
7.25% Senior Debentures, due August 1, 2097	84	7.25 %	84	7.25 %
Total	6,203		6,197	
Unamortized Discount	(25 )		(26 )	
Total Debt, Net of Discount	6,178		6,171	
Less Amounts Due Within One Year				
Capital Lease Obligations	(65 )		(68 )	
Long-Term Debt Due After One Year	\$6,113		\$6,103	

Credit Facility Our Credit Agreement provides for a \$4.0 billion unsecured revolving credit facility (Credit Facility), which is available for general corporate purposes. The Credit Facility (i) provides for facility fee rates that range from 12.5 basis points to 30 basis points per year depending upon our credit rating, (ii) includes sub-facilities for short-term loans and letters of credit up to an aggregate amount of \$500 million under each sub-facility and (iii) provides for interest rates that are based upon the Eurodollar rate plus a margin that ranges from 100 basis points to 145 basis points depending upon our credit rating.

See [Note 7](#). Fair Value Measurements and Disclosures for a discussion of methods and assumptions used to estimate the fair values of debt.

## Note 7. Fair Value Measurements and Disclosures

## Assets and Liabilities Measured at Fair Value on a Recurring Basis

Certain assets and liabilities are measured at fair value on a recurring basis in our consolidated balance sheets. The following methods and assumptions were used to estimate the fair values:

Cash, Cash Equivalents, Accounts Receivable and Accounts Payable The carrying amounts approximate fair value due to the short-term nature or maturity of the instruments.

Mutual Fund Investments Our mutual fund investments, which primarily include assets held in a rabbi trust, consist of various publicly-traded mutual funds that include investments ranging from equities to money market instruments. The fair values are based on quoted market prices for identical assets.

Commodity Derivative Instruments Our commodity derivative instruments may include: variable to fixed price commodity swaps, two-way collars, and/or three-way collars. We estimate the fair values of these instruments based

on published forward commodity price curves as of the date of the estimate. The discount rate used in the discounted cash flow projections is based on published LIBOR rates, Eurodollar futures rates and interest swap rates. The fair values of commodity derivative instruments in an asset position include a measure of counterparty nonperformance risk, and the fair values of commodity derivative instruments in a liability position include a measure of our own nonperformance risk, each based on the current published credit default swap rates. In addition, for collars, we estimate the option values of the put options sold and the contract floors and ceilings using an option pricing model which takes into account market volatility, market prices and contract terms. See Note 5. Derivative Instruments and Hedging Activities.

**Deferred Compensation Liability** The value is dependent upon the fair values of mutual fund investments and shares of our common stock held in a rabbi trust. See Mutual Fund Investments above.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

Measurement information for assets and liabilities that are measured at fair value on a recurring basis was as follows:

	Fair Value Measurements Using				Fair Value Measurement	
	Quoted Prices in Active Markets (Level 1) <sup>(1)</sup>	Significant Other Observable Inputs (Level 2) <sup>(2)</sup>	Significant Unobservable Inputs (Level 3) <sup>(3)</sup>	Adjustment <sup>(4)</sup>		
(millions)						
March 31, 2015						
Financial Assets						
Mutual Fund Investments	\$ 112	\$—	\$—	\$—	\$ 112	
Commodity Derivative Instruments	—	832	—	(2	) 830	
Financial Liabilities						
Commodity Derivative Instruments	—	(2	) —	2	—	
Portion of Deferred Compensation Liability Measured at Fair Value	(137	) —	—	—	(137	)
December 31, 2014						
Financial Assets						
Mutual Fund Investments	\$ 111	\$—	\$—	\$—	\$ 111	
Commodity Derivative Instruments	—	890	—	—	890	
Financial Liabilities						
Commodity Derivative Instruments	—	—	—	—	—	
Portion of Deferred Compensation Liability Measured at Fair Value	(134	) —	—	—	(134	)

Level 1 measurements are fair value measurements which use quoted market prices (unadjusted) in active markets <sup>(1)</sup> for identical assets or liabilities. We use Level 1 inputs when available as Level 1 inputs generally provide the most reliable evidence of fair value.

<sup>(2)</sup> Level 2 measurements are fair value measurements which use inputs, other than quoted prices included within Level 1, which are observable for the asset or liability, either directly or indirectly.

<sup>(3)</sup> Level 3 measurements are fair value measurements which use unobservable inputs.

<sup>(4)</sup> Amount represents the impact of netting provisions within our master agreements that allow us to net cash settle asset and liability positions with the same counterparty.

**Assets and Liabilities Measured at Fair Value on a Nonrecurring Basis**

Certain assets and liabilities are measured at fair value on a nonrecurring basis in our consolidated balance sheets. The following methods and assumptions were used to estimate the fair values:

Asset Impairments Information about impaired assets is as follows:

Description	Fair Value Measurements Using			Net Book Value <sup>(1)</sup>	Total Pre-tax (Non-cash) Impairment Loss
	Quoted Prices in Active Markets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)		
millions					
Three Months Ended March 31, 2015					
Impaired Oil and Gas Properties	\$—	\$—	\$—	\$27	\$27
Three Months Ended March 31, 2014					

Impaired Oil and Gas Properties	—	—	6	103	97
---------------------------------	---	---	---	-----	----

(1) Amount represents net book value at the date of assessment.

15

---

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

The fair value of impaired oil and gas properties was determined as of the date of the assessment using a discounted cash flow model based on management's expectations of future crude oil and natural gas production prior to abandonment date, commodity prices based on NYMEX WTI, NYMEX Henry Hub, and Brent future price curves as of the date of the estimate, estimated operating and abandonment costs, and a risk-adjusted discount rate of 10%. First quarter 2015 impairments were due primarily to increases in asset carrying values associated with increases in estimated abandonment costs. See Note 4. Asset Impairments.

Additional Fair Value Disclosures

**Debt** The fair value of public, fixed-rate debt is estimated based on the published market prices for the same or similar issues. As such, we consider the fair value of our public, fixed-rate debt to be a Level 1 measurement on the fair value hierarchy.

As such, we consider the fair values of our Credit Facility to be a Level 2 measurement on the fair value hierarchy.

See Note 6. Debt.

Fair value information regarding our debt is as follows:

(millions)	March 31, 2015		December 31, 2014	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Total Debt, Net of Unamortized Discount <sup>(1)</sup>	\$5,759	\$6,385	\$5,758	\$6,179

<sup>(1)</sup> Excludes capital lease and other obligations.

Note 8. Capitalized Exploratory Well Costs

We capitalize exploratory well costs until a determination is made that the well has found proved reserves or is deemed noncommercial. If a well is deemed to be noncommercial, the well costs are charged to exploration expense as dry hole cost.

Changes in capitalized exploratory well costs are as follows and exclude amounts that were capitalized and subsequently expensed in the same period:

(millions)	Three Months Ended March 31, 2015
Capitalized Exploratory Well Costs, Beginning of Period	\$1,337
Additions to Capitalized Exploratory Well Costs Pending Determination of Proved Reserves	59
Reclassified to Proved Oil and Gas Properties Based on Determination of Proved Reserves	(6)
Capitalized Exploratory Well Costs Charged to Expense <sup>(1)</sup>	(17)
Capitalized Exploratory Well Costs, End of Period	\$1,373

<sup>(1)</sup> Relates to onshore US exploration activity.

The following table provides an aging of capitalized exploratory well costs based on the date that drilling commenced, and the number of projects that have been capitalized for a period greater than one year:

(millions)	March 31, 2015	December 31, 2014
Exploratory Well Costs Capitalized for a Period of One Year or Less	\$272	\$247
Exploratory Well Costs Capitalized for a Period Greater Than One Year Since Commencement of Drilling	1,101	1,090
Balance at End of Period	\$1,373	\$1,337
Number of Projects with Exploratory Well Costs That Have Been Capitalized for a Period Greater Than One Year Since Commencement of Drilling	13	13

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

The following table includes exploratory well costs that have been capitalized for a period greater than one year since the commencement of drilling as of March 31, 2015:

(millions)	Total by Project	Progress
Country/Project: Onshore US		
Northeast Nevada	\$26	Analyzing results from our first four exploratory vertical wells and evaluating potential for production tests.
Deepwater Gulf of Mexico		
Troubadour	47	Evaluating development scenarios for this 2013 natural gas discovery including subsea tieback to existing infrastructure.
Offshore Equatorial Guinea (Blocks O and I)		
Diega/Carmen	221	Evaluating regional development scenarios for this 2008 crude oil discovery. We drilled subsequent appraisal wells. During 2014, we conducted additional seismic activity over Blocks O and I and are engaged in processing the newly-acquired seismic data.
Carla	154	Evaluating regional development scenarios for this 2011 crude oil discovery. We drilled subsequent appraisal wells. During 2014, we conducted additional seismic activity over Blocks O and I and are engaged in processing the newly-acquired seismic data.
Felicita	39	Evaluating regional development plans for this 2008 condensate and natural gas discovery. A natural gas development team is working with the governments of Equatorial Guinea and Cameroon to evaluate natural gas monetization options and finalize a data exchange agreement between the two countries.
Yolanda	20	Evaluating regional development plans for this 2007 condensate and natural gas discovery. A natural gas development team is working with the governments of Equatorial Guinea and Cameroon to evaluate natural gas monetization options and finalize a data exchange agreement between the two countries.
Offshore Cameroon YoYo	48	Working with the government to assess commercialization of this 2007 condensate and natural gas discovery. A natural gas development team is working with the governments of Equatorial Guinea and

Offshore Israel <sup>(1)</sup>		Cameroon to evaluate natural gas monetization options and finalize a data exchange agreement between the two countries.
Leviathan	185	During 2014, we received the Leviathan Development and Production Leases, submitted a development plan to the government, completed substantial engineering and procurement activities and engaged in natural gas marketing activities.
Leviathan-1 Deep	79	Well did not reach the target interval; developing future drilling plans to test this deep oil concept, which is held by the Leviathan Development and Production Leases. We are working on potential well design and placement.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

Dalit	28	Submitted a development plan to the government to develop this 2009 natural gas discovery as a tie-in to existing infrastructure. Reviewing regional development scenarios for this 2011 natural gas discovery, including a potential tieback to Leviathan. We have applied to the Israeli government for a commerciality ruling.
Dolphin 1	25	
Offshore Cyprus		Discussing monetization options with the Cyprus government for this 2011 natural gas discovery. In May 2014, our application for renewal of the PSC for two additional years was approved. We plan to submit a plan of development to the government in 2015.
Cyprus	203	
Other		
Individual Projects Less than \$20 million	26	Continuing to drill and evaluate wells.
Total	\$1,101	

(1) We are currently working to resolve antitrust and other regulatory matters with the Israeli government to enable Leviathan and other development to move forward. See Note 2. Basis of Presentation – Update on Core Area – Israel.

## Note 9. Asset Retirement Obligations

Asset retirement obligations (ARO) consists primarily of estimated costs of dismantlement, removal, site reclamation and similar activities associated with our oil and gas properties. Changes in ARO are as follows:

(millions)	Three Months Ended	
	March 31,	
	2015	2014
Asset Retirement Obligations, Beginning Balance	\$751	\$586
Liabilities Incurred	10	1
Liabilities Settled	(8	) (14
Revision of Estimate	24	72
Accretion Expense <sup>(1)</sup>	10	10
Asset Retirement Obligations, Ending Balance	\$787	\$655

(1) Accretion expense is included in DD&A expense in the consolidated statements of operations.

For the three months ended March 31, 2015

Liabilities incurred were due to new wells and facilities and included \$4 million for onshore US and \$6 million for deepwater Gulf of Mexico. Liabilities settled in 2015 relate primarily to non-core US properties classified as held for sale.

Revisions in estimate for 2015 relate to changes in cost estimates for Eastern Mediterranean.

For the three months ended March 31, 2014

Liabilities settled in 2014 include \$24 million for onshore US and deepwater Gulf of Mexico abandonments and \$17 million related to properties classified as held for sale, offset by \$27 million as a result of reclassifying remaining North Sea assets from held for sale to held and used.

Revision in estimate for 2014 included an increase of \$67 million related to the non-operated MacCulloch North Sea field due to an increase in costs and a change in timing. See Note 3. Divestitures.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

## Note 10. Earnings Per Share

Basic earnings per share of common stock is computed using the weighted average number of shares of common stock outstanding during each period. The diluted earnings per share of common stock include the effect of outstanding stock options, shares of restricted stock, or shares of our common stock held in a rabbi trust (when dilutive). The following table summarizes the calculation of basic and diluted earnings per share:

(millions, except per share amounts)	Three Months Ended March 31,	
	2015	2014
Net Income (Loss)	\$(22 )	\$200
Weighted Average Number of Shares Outstanding, Basic <sup>(1)</sup>	370	360
Incremental Shares from Assumed Conversion of Dilutive Stock Options, Restricted Stock, and Shares of Common Stock in Rabbi Trust <sup>(2)</sup>	—	5
Weighted Average Number of Shares Outstanding, Diluted	370	365
Earnings (Loss) Per Share, Basic	\$(0.06 )	\$0.56
Earnings (Loss) Per Share, Diluted	(0.06 )	0.55
Number of Antidilutive Stock Options, Shares of Restricted Stock, and Shares of Common Stock in Rabbi Trust Excluded from Calculation Above	9	6

The weighted average number of shares outstanding includes the weighted average shares of common stock issued <sup>(1)</sup> in connection with the underwritten public offering of 24,150,000 shares of common stock of the Company in first quarter 2015.

For the three months ended March 31, 2015, all outstanding options and non-vested restricted shares have been <sup>(2)</sup> excluded from the calculation of diluted EPS as the Company incurred a loss for the quarter. Therefore, inclusion of outstanding options and non-vested restricted shares in the calculation of diluted EPS would be anti-dilutive.

## Note 11. Income Taxes

The income tax provision relating to continuing operations consists of the following:

(millions)	Three Months Ended March 31,		
	2015	2014	
Current	\$10	\$60	
Deferred	(30 )	17	
Total Income Tax (Benefit) Provision	\$(20 )	\$77	
Effective Tax Rate	47.6	% 27.6	%

Our effective tax rate (ETR) for the three months ended March 31, 2015 increased as compared with the three months ended March 31, 2014 primarily as a result of a tax benefit divided by a pre-tax loss. In the case of a pre-tax loss, our favorable permanent differences, such as income from equity method investees and increased earnings in our foreign jurisdictions with rates that vary from the US statutory rate, have the effect of increasing the tax benefit which, in turn, increases the ETR.

In our major tax jurisdictions, the earliest years remaining open to examination are as follows: US – 2011, Equatorial Guinea – 2009 and Israel – 2010.

Table of Contents

Noble Energy, Inc.

Notes to Consolidated Financial Statements

## Note 12. Segment Information

We have operations throughout the world and manage our operations by country. The following information is grouped into four components that are all in the business of crude oil and natural gas exploration, development, production, and acquisition: the United States; West Africa (Equatorial Guinea, Cameroon, Sierra Leone, and Gabon); Eastern Mediterranean (Israel and Cyprus); and Other International and Corporate. Other International includes the North Sea, China (through June 30, 2014), Falkland Islands, Nicaragua and new ventures. Income (loss) from continuing operations before income taxes for the United States and West Africa includes gains and losses on commodity derivative instruments.

(millions)	Consolidated	United States	West Africa	Eastern Mediterranean	Other Int'l & Corporate
Three Months Ended March 31, 2015					
Revenues from Third Parties	\$740	\$478	\$138	\$120	\$4
Income from Equity Method Investees	18	11	7	—	—
Gathering, Marketing and Processing	1	1	—	—	—
Total Revenues	759	490	145	120	4
DD&A	454	357	77	15	5
Asset Impairments	27	3	—	24	—
Gain on Commodity Derivative Instruments	(150 )	(105 )	(45 )	—	—
Income (Loss) Before Income Taxes	(42 )	(1 )	74	51	(166 )
Three Months Ended March 31, 2014					
Revenues from Third Parties	\$1,327	\$842	\$323	\$112	\$50
Income from Equity Method Investees	52	—	52	—	—
Total Revenues	1,379	842	375	112	50
DD&A	425	308	76	14	27
Asset Impairments	97	5	—	—	92
Loss on Commodity Derivative Instruments	75	76	(1 )	—	—
Income (Loss) from Before Income Taxes	277	183	261	77	(244 )
March 31, 2015					
Total Assets	\$23,261	\$16,998	\$2,732	\$2,840	\$691
December 31, 2014					
Total Assets	22,553	16,400	2,763	2,806	584

## Note 13. Commitments and Contingencies

**CONSOL Carried Cost Obligation** In accordance with our Marcellus Shale joint venture arrangement with a subsidiary of CONSOL Energy Inc. (CONSOL), we agreed to fund one-third of CONSOL's 50% working interest share of future drilling and completion costs, capped at \$400 million each year (CONSOL Carried Cost Obligation). The remaining obligation totaled approximately \$1.6 billion at March 31, 2015.

The CONSOL Carried Cost Obligation is suspended if average Henry Hub natural gas prices fall and remain below \$4.00 per MMBtu in any three consecutive month period and remain suspended until average Henry Hub natural gas prices equal or exceed \$4.00 per MMBtu for three consecutive months. The CONSOL Carried Cost Obligation is currently suspended due to low natural gas prices. Based on the March 31, 2015 NYMEX Henry Hub natural gas price curve, we expect that the CONSOL Carried Cost Obligation will be suspended for the next 12 months.

**Legal Proceedings** We are involved in various legal proceedings in the ordinary course of business. These proceedings are subject to the uncertainties inherent in any litigation. We are defending ourselves vigorously in all such matters and we believe that the ultimate disposition of such proceedings will not have a material adverse effect

on our financial position, results of operations or cash flows.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) is intended to provide a narrative about our business from the perspective of our management. We use common industry terms, such as thousand barrels of oil equivalent per day (MBoe/d) and million cubic feet equivalent per day (MMcfe/d), to discuss production and sales volumes. Our MD&A is presented in the following major sections:

Executive Overview;  
Operating Outlook;  
Results of Operations; and  
Liquidity and Capital Resources.

The preceding consolidated financial statements, including the notes thereto, contain detailed information that should be read in conjunction with our MD&A.

EXECUTIVE OVERVIEW

We are a worldwide explorer and producer of crude oil, natural gas and natural gas liquids. We aim to achieve sustainable growth in value and cash flow through exploration success and the development of a high-quality, diversified portfolio of assets with investment flexibility between: onshore unconventional developments and offshore organic exploration leading to major development projects; US and international development projects; and production mix among crude oil, natural gas, and NGLs. We currently focus our efforts in five core operating areas: the DJ Basin and Marcellus Shale (onshore US), deepwater Gulf of Mexico, offshore West Africa, and offshore Eastern Mediterranean, where we have strategic competitive advantage and which we believe generate attractive returns. We also seek to enter potential new core areas, and we are currently conducting exploration activities in domestic and international locations such as Northeast Nevada, the Falkland Islands, Cameroon, and Gabon.

Significant Operating Highlights Included:

- record total sales volumes of 318 MBoe/d, an 11% increase over first quarter 2014;
- record quarterly US onshore horizontal volumes of 96 MBoe/d;
- deepwater Gulf of Mexico major projects remain on schedule and on budget;
- first gas sales and purchase agreement for regional export of Eastern Mediterranean natural gas approved;
- planning for upcoming exploration opportunities offshore the Falkland Islands and Cameroon; and
- a decision to exit our position in Nicaragua following detailed future prospect review.

First Quarter 2015 Financial Results Included:

- net loss of \$22 million, as compared with net income of \$200 million for first quarter 2014;
- engagement in cost reduction initiatives, including both operational enhancements and new pricing arrangements with service partners, which we expect will decrease capital and operating costs through the year;
- net gain on commodity derivative instruments of \$150 million (including \$60 million non-cash loss) as compared with
- a net loss on commodity derivative instruments of \$75 million (including \$42 million non-cash loss) for first quarter 2014;
- asset impairment charges of \$27 million, as compared with \$97 million for first quarter 2014;
- diluted loss per share of \$0.06, as compared with diluted earnings per share of \$0.55 for first quarter 2014;
- cash flow provided by operating activities of \$541 million, as compared with \$929 million for first quarter 2014; and
- capital expenditures (accrual based) of \$919 million, as compared with \$951 million for first quarter 2014.

Significant Events Impacting Liquidity Included:

- net cash proceeds of \$1.1 billion received from public offering of shares of common stock.

Quarter-End Key Financial Metrics Included:

- ending cash balance of \$1.7 billion, as compared with \$1.2 billion at December 31, 2014;
- total liquidity of \$5.7 billion at March 31, 2015, as compared with \$5.2 billion at December 31, 2014; and
- ratio of debt-to-book capital of 35% at March 31, 2015, as compared with 38% at December 31, 2014.

Commodity Price Changes The upstream oil and gas business is cyclical. During 2014, natural gas prices declined steadily, and, during fourth quarter 2014, a significant decline in crude oil prices occurred. During first quarter 2015, crude oil and average realized natural gas prices continued to decline. As a result, our consolidated average realized crude oil price

## Table of Contents

decreased 54% and our consolidated average realized natural gas price decreased 27% for first quarter 2015 as compared with first quarter 2014.

We are unable to predict the extent to which commodity prices may recover during 2015. Prices are likely to remain volatile and could decline further. In addition, we could be entering a period of sustained, lower worldwide crude oil prices.

We plan for these cyclical downturns in our business and feel we are well positioned to withstand current and future commodity price volatility:

- we have a high-quality, diversified portfolio of assets which provide investment flexibility;
- we have positive operating cash flow (revenues less cash operating expenses), prior to capital expenditures, in each of our core areas;
- we have designed a substantially-reduced capital investment program which will allow us to respond to conditions that occur in 2015;
- we are well hedged, with approximately 60% of global crude oil and 50% of domestic natural gas production hedged for 2015, with additional quantities hedged into 2016;
- we have a strong balance sheet with a ratio of debt-to-book capital of 35% at March 31, 2015; and
- we have robust liquidity with total liquidity of \$5.7 billion at March 31, 2015.

See Operating Outlook – 2015 Capital Investment Program below.

### Major Development Project Updates

We continue to advance our major development projects, which we expect to deliver incremental production over the next several years. Updates on major development projects are as follows:

#### Sanctioned Ongoing Development Projects

A "sanctioned" development project is one for which a final investment decision has been made.

**DJ Basin (Onshore US)** During the quarter, we drilled 57 horizontal wells and commenced production on 48 wells, including 17 extended reach lateral wells. Third-party compression, natural gas processing and transportation capacity continue to expand.

**Marcellus Shale (Onshore US)** During the quarter, we drilled 15 operated wells, and commenced production on three operated wells. Our joint venture partner drilled 25 wells and 29 dry gas wells commenced production.

**Gunflint (Deepwater Gulf of Mexico)** Development is on track for the Gunflint (31% operated working interest) crude oil discovery, utilizing a two-well subsea tieback to the Gulfstar 1 spar platform. The drilling rig is currently performing development work at Gunflint. Topsides equipment fabrication is underway for installation in 2015 through early 2016, and first production is targeted for mid-2016.

**Big Bend and Dantzler (Deepwater Gulf of Mexico)** A co-development project is underway for the Big Bend (54% operated working interest) and Dantzler (45% operated working interest) crude oil discoveries, located in the Rio Grande area of the deepwater Gulf of Mexico, which will tie back to the Thunder Hawk semi-submersible production facility. All drilling and completion activities are complete, and development work is progressing on schedule. First production for Big Bend is targeted for fourth quarter 2015, and first production for Dantzler is targeted for end of 2015.

**Tamar Compression (Onshore Israel)** The Tamar compression project is near completion. The compression is targeted to increase deliverability at Tamar to approximately 1.2 Bcf/d, gross, beginning in mid-2015.

**Tamar Southwest** We continue to work with the Israeli government to obtain regulatory approval of our development plan for the Tamar Southwest discovery, which is intended to utilize current Tamar infrastructure. Continuing delays in securing regulatory approvals have placed the project at risk of delay. We have petitioned the Israeli courts to expedite the needed approvals. Timely development of Tamar Southwest is important to maintain well capacity and reliability for our overall Tamar project.

#### Unsanctioned Development Projects

**Tamar Expansion Project (Offshore Israel)** We have engaged in the planning phase for an expansion project which would expand Tamar field deliverability to approximately 2.0 Bcf/d. Timing of project sanction depends on satisfactory resolution of antitrust and other regulatory matters. See Update on Core Area – Israel, below.

Leviathan Project (Offshore Israel) In 2014, we submitted the Plan of Development to the Ministry of National Infrastructures, Energy and Water Resources. The development plan is expected to serve both domestic demand and export. Timing of project sanction depends on satisfactory resolution of antitrust and other regulatory matters, as well as execution of natural gas sales and purchase agreements (GSPAs), which will be subject to, among other conditions, the receipt of regulatory

Table of Contents

approvals. Project financing will also be required. We are engaged with the governments of the US, Israel, Jordan and Egypt on this project. See Update on Core Area – Israel, below.

Cyprus Project (Offshore Cyprus) We are currently evaluating development scenarios for Block 12 and plan to submit a plan of development to the Cypriot government in 2015. There is also potential for a farm-out arrangement of our working interest.

See Item 1. Financial Statements – Note 8. Capitalized Exploratory Well Costs for additional information on costs incurred related to these projects.

Exploration Program Update

We have numerous exploration opportunities remaining in our core areas and are also engaged in new venture activity in both US and international locations.

We were in the process of drilling and/or evaluating significant exploratory wells at March 31, 2015 (See Item 1. Financial Statements – Note 8. Capitalized Exploratory Well Costs), and expect to conduct additional exploratory activities.

A portion of our 2015 capital investment program is dedicated to exploration and associated appraisal activities.

However, we do not always encounter hydrocarbons through our drilling activities. In addition, we may find hydrocarbons but subsequently reach a decision, through additional analysis or appraisal drilling, that a development project is not economically or operationally viable.

In the event we conclude that one of our exploratory wells did not encounter hydrocarbons or that a discovery is not economically or operationally viable, the associated capitalized exploratory well costs would be recorded as dry hole expense.

Additionally, we may not be able to conduct exploration activities prior to lease expirations. As a result, in a future period, dry hole cost and/or leasehold abandonment expense could be significant. See Operating Outlook – Potential for Future Asset Impairment, Dry Hole or Lease Abandonment Expense, below.

Updates on significant exploration activities are as follows:

Northeast Nevada We have drilled four exploratory wells to date. Further testing is required to assess commercial viability, and we are preparing to conduct production testing of the third well during second quarter 2015. Currently, no exploratory drilling is planned for the remainder of 2015.

Deepwater Gulf of Mexico We currently have an inventory of identified prospects, which are a combination of both high impact subsalt prospects and smaller, high value tie-back opportunities. These prospects are subject to an ongoing technical maturation process and may or may not emerge as drillable options. We are actively assessing exploration and appraisal drilling activity necessary to test the resource potential of our Katmai discovery from third quarter 2014 (Green Canyon Block 40, 50% operated working interest). We anticipate drilling a Katmai appraisal well in 2016.

Offshore West Africa We are currently processing the results of recently-acquired 3D seismic data across Blocks O and I which will aid in advancing other regional exploration and development opportunities, including Diega/Carmen and Carla.

During first quarter, the Government of Cameroon approved a farmout of a portion of our working interest in the Tilapia PSC to Woodside Energy, Ltd. We remain the operator (46.67% working interest) and plan to drill the Cheetah exploration prospect in the second half of 2015. We are also reprocessing 3D seismic data over our YoYo mining concession.

Offshore Eastern Mediterranean See Update on Core Area – Israel, below.

Offshore Falkland Islands We anticipate drilling operations to begin at the Humpback prospect (35% operated working interest), located in the South Falkland Basin, in May 2015. In addition, we recently acquired a 75% interest and operatorship of the PL001 License in the North Falkland Basin. The PL001 License covers an area of nearly 285,000 gross acres. We have identified the Rhea prospect as the initial target on the PL001 License and expect to commence drilling in third quarter 2015.

Argentine officials have recently filed charges against Noble and other oil and gas companies operating offshore the Falkland Islands. We believe the charges have no merit. Our concessions are offshore the Falkland Islands and our concession contracts are with the Falkland Islands Government.

Table of Contents

Non-Core Divestiture Program

We have continued our non-core asset divestiture program with the sale of certain smaller onshore US property packages during the first three months of 2015. Divestitures of non-core properties allow us to allocate capital and human resources to high-value and high-growth areas. See Item 1. Financial Statements – Note 3. Divestitures and Operating Outlook - Potential for Future Asset Impairment, Dry Hole or Lease Abandonment Expense, below.

Colorado Air Matter

In August 2013, we received an information request from the EPA under Section 114 of the Clean Air Act regarding several tank batteries used in our DJ Basin operations. The information request relates to our compliance with certain regulatory requirements at those locations, including air emissions of volatile organic compounds in a marginal ozone non-attainment area. We responded to the EPA's information requests between November 2013 and April 2014 and, in April 2015, reached a settlement with the EPA and the State of Colorado regarding potential noncompliance with the Clean Air Act, Colorado's State Implementation Plan, Colorado's Air Pollution Prevention and Control Act and its implementation regulations. See Part II. Other Information – Item 1. Legal Proceedings.

Update on Core Area – Israel

Noble Energy and its partners have been committed to providing natural gas to Israeli citizens for over a decade. We have delivered approximately 1.3 Tcf, gross, of natural gas to Israeli customers, including the government-owned Israel Electric Corporation (IEC), the largest supplier of electricity in the country.

Since obtaining our first exploration license in 1998, Noble Energy has been the first, and only, oil and natural gas company to successfully explore for significant amounts of hydrocarbons in Israel. We are also the first company to construct, operate and produce from a major development project offshore Israel. We have invested significant amounts of capital in exploration and development activities since 1998. Throughout this time, we have focused on partnering with our customers and the Israeli government to provide a reliable fuel source at reasonable prices to support affordable energy for the country's citizens.

Since our initial discovery at Mari-B in 2000, we and our partners have continued to reinvest for long-term growth, leasing additional acreage and conducting exploration activities offshore Israel, in pursuit of additional resources to meet increasing demand from Israeli consumers and global markets. Our exploration efforts resulted in numerous natural gas discoveries over the past several years. The Tamar and Leviathan discoveries, in particular, are large scale, high quality reservoirs, of global significance, providing substantial additional resources for the government and citizens of Israel. We developed the Tamar field, with a discovery to production cycle time of approximately four years, which is exceptionally fast by historical industry standards for an offshore natural gas project of this magnitude and complexity.

The quantity of discovered resources at Tamar and Leviathan have positioned Israel to meet domestic needs for years to come and eventually become a significant natural gas exporter. Multiple regional markets are emerging and Israel's domestic demand is predicted to continue to grow over the next decade. Eastern Mediterranean export projects would be well positioned to supply growing regional and global natural gas demand, which would provide benefits beyond satisfying domestic consumption of natural gas. In fact, we have been working with potential customers to supply natural gas through a regional pipeline system and/or LNG facilities. Government export royalties and tax revenues related to regional export sales would provide material financial benefit for Israel's citizens.

In addition to our natural gas discoveries, the Levant Basin also has potential for large scale crude oil discoveries, which may exist at greater depths. We have conducted preliminary exploration activities and have been planning to complete our test of two deeper intervals.

We have been working with the Israeli government on plans to develop the Leviathan field and expand the currently-producing Tamar field. However, the regulatory environment in Israel has become increasingly challenging and uncertain. Laws, regulations and guidelines have been modified, sometimes with retroactive impacts, resulting in an unpredictable investment climate. Timing of approval for development plans has been delayed, and consequently our ability to make significant, long-term investment decisions has been stymied.

Since 2011, following the discovery of Leviathan, we have been engaged with the Israeli government, including the Antitrust Commissioner, to reach agreement on various antitrust matters resulting from our significant resource ownership status. During 2014, we and our partners reached an agreement with the Israeli government on the antitrust

matters (Consent Decree), which included an agreement to divest two of our natural gas discoveries, Tanin and Karish.

Acting in good faith upon the Consent Decree, we engaged in discussions with potential purchasers of the Tanin and Karish discoveries. We believed that the Consent Decree matter had been resolved and had received assurances from the Antitrust Authority that approval was forthcoming.

Table of Contents

However, on December 23, 2014, the Israeli Antitrust Commissioner (Commissioner) reversed a decision to submit the agreed Consent Decree to the Israeli Antitrust Tribunal for approval. Subsequently, we requested an oral hearing with the Antitrust Authority. The hearing took place on January 27, 2015, and we are awaiting final disposition. Because stable fiscal and regulatory regimes are imperative to support ongoing investment and sanction of major development projects, we determined that the resolution of the following items, and greater certainty with respect to Israeli fiscal and regulatory matters, would be required prior to sanction of a Leviathan development project, the Tamar expansion or other future development projects:

- Approval of final gas sale and purchase agreements with off-takers, to support financing arrangements;
- Clear, economically viable tax rulings, including export tax rulings;
- Export approval with reasonable export allocations;
- Approvals of Plans of Development;
- Acceptable resolution of Leviathan and other pending matters with the Israeli Antitrust Authority;
- Timely permitting;
- Prompt decisions regarding pipeline onshore landing sites;
- Other relevant regulatory terms critical to offshore crude oil and natural gas exploration and production;
- Stable fiscal and contract terms that allow for financial returns that are appropriate to support long-term investment by a global exploration and production company; and
- Stability clauses and protection from changes in laws and regulations.

In response to this situation, in late 2014, the Prime Minister's office established an inter-ministerial working group, led by the head of the National Economic Council, for the purpose of addressing outstanding regulatory matters and developing a comprehensive regulatory framework to support further investment in natural gas development. We have been engaged with the Israeli government inter-ministerial working group in an attempt to resolve these matters. During March 2015, general elections were held, and a new coalition government is under formation. Under this new governing coalition, leadership changes in certain of the government ministries could occur, which could impact the timing of decisions regarding natural gas development.

Although our development plans have been delayed as a result of recent government actions, described above, we believe that, given the quality of the natural gas resources and significant associated economic benefit to the citizens of Israel, which could total in the billions of dollars over the life of the fields, it is in the best interest of the Israeli government to ultimately support development, and, we continue to expect that our discoveries will be developed, upon satisfactory resolution of the above matters. Therefore, we believe the risk of loss of our investment is remote as the value of these assets could be realized through ultimate development and/or sale to third parties. In addition, we would pursue any and all remedies for any damages incurred.

As of March 31, 2015, our \$2.1 billion investment in Israel includes: approximately \$1.3 billion related to the currently-producing Tamar field; approximately \$400 million related to the Leviathan natural gas discovery and suspended deep oil test; approximately \$300 million related to the Tamar expansion project and previous discoveries which are awaiting sanction of development plans; and \$76 million related to the Karish and Tanin discoveries, which are included in assets held for sale. We expect further capital expenditure to be minimized, pending resolution of regulatory matters.

Update on Regulations

DOI Hydraulic Fracturing Rules

Although hydraulic fracturing is regulated primarily at the state level, governments and agencies at all levels from federal to municipal are conducting studies and considering regulations, and some have proposed rules.

On March 26, 2015, the US Interior Department's Bureau of Land Management (BLM) published a final rule regulating hydraulic fracturing on public and Indian lands. The new rules include requirements related to well-bore integrity, wastewater disposal and public disclosure of chemicals. Key components of the rule, which will take effect on June 24, 2015, include:

- provisions for ensuring the protection of groundwater supplies by requiring a validation of well integrity and strong cement barriers between the wellbore and water zones through which the wellbore passes;

- increased transparency by requiring companies to publicly disclose chemicals used in hydraulic fracturing to the Bureau of Land Management through the website FracFocus, within 30 days of completing fracturing operations;
- higher standards for interim storage of recovered waste fluids from hydraulic fracturing to mitigate risks to air, water and wildlife; and
- measures to lower the risk of cross-well contamination with chemicals and fluids used in the fracturing operation, by requiring companies to submit more detailed information on the geology, depth, and location of preexisting wells to afford the BLM an opportunity to better evaluate and manage unique site characteristics.

## Table of Contents

We are currently reviewing the final rules to determine the impacts, including additional costs and reporting burdens and increased cycle time for permit approval, they may have on our operations on federal land, including our federal units in Nevada.

### Nevada Regulations

In September 2014, Nevada state regulators finalized regulations for the use of hydraulic fracturing in crude oil and natural gas development. The regulatory program includes requirements for groundwater baseline sampling and monitoring, water resource and wastewater disposal requirements, chemical disclosure requirements and mandates for extra casing for unconventional wells. We actively participated in its development and do not believe it will have a material impact on our activities.

### DOI Proposed Offshore Drilling Regulations

On April 13, 2015, the DOI announced proposed regulations which include more stringent design requirements and operational procedures for critical well control equipment used in offshore oil and gas operations.

The proposed rule, which will be open for public comment, addresses the range of systems and equipment related to well control operations. The measures are designed to improve equipment reliability, building upon enhanced industry standards for blowout preventers and blowout prevention technologies. The rule also includes reforms in well design, well control, casing, cementing, real-time well monitoring and subsea containment. We will continue to monitor the development of these new regulations to determine the impacts, including additional costs and reporting burdens, they may have on our deepwater Gulf of Mexico operations.

### Endangered Species Act

The US Fish and Wildlife Service (the Agency), under the Endangered Species Act (ESA), has regulatory authority over our exploration for, and production and sale of, crude oil, natural gas and NGLs and activities that may result in the take of any endangered or threatened species or its habitat. The Agency recently listed the northern long-eared bat as threatened under the ESA, which could have an impact on the timing of certain of our operations in the Marcellus Shale.

### Colorado Task Force

In 2014, by executive order, Colorado Governor Hickenlooper created the Task Force on State and Local Regulation of Oil and Gas Operations (Task Force) for the purpose of recommending policies and legislation.

The 21-member Task Force, which included a Noble Energy representative, concluded its activities on February 27, 2015. The Task Force sent nine recommendations to the governor. The recommendations seek to balance land use issues among communities and oil and gas operators and allow reasonable access to private mineral rights. Three recommendations are presently being considered by the legislature and the governor is reviewing the remaining recommendations, but has not yet indicated how he plans to proceed.

In addition to the above, we will continue to monitor proposed and new regulations and legislation in all operating jurisdictions to assess the potential impact on our company. Concurrently, we are engaged in extensive public education and outreach efforts with the goal of engaging and educating the general public and communities about the energy, economic and environmental benefits of safe and responsible crude oil and natural gas development.

### Sales Volumes

On a BOE basis, total sales volumes were 11% higher for first quarter 2015 as compared with first quarter 2014, and our mix of sales volumes was 43% global liquids, 25% international natural gas, and 32% US natural gas. See Results of Operations – Revenues, below.

### Recently Issued Accounting Standards

See Item 1. Financial Statements – Note 2. Basis of Presentation.

## OPERATING OUTLOOK

**2015 Production** Our expected crude oil, natural gas and NGL production for 2015 may be impacted by several factors including:

- overall level and timing of capital expenditures which, as discussed below and dependent upon our drilling success, will impact near-term production volumes;
- the level of horizontal drilling activity in the DJ Basin and the Marcellus Shale;
-

decline in our DJ Basin legacy vertical well production and capacity constraints of midstream facilities serving those wells;  
• timing of start up of DCP Midstream's Lucerne 2 cryogenic plant and occurrence of other events which impact capacity constraints of midstream facilities serving our DJ Basin horizontal wells;

26

---

Table of Contents

- timing of start-up of the Big Bend project (deepwater Gulf of Mexico);
- Israeli demand for electricity, which affects demand for natural gas as fuel for power generation and industrial market growth, and which is impacted by unseasonable weather;
- variations in West Africa crude oil and condensate sales volumes due to potential Aseng FPSO downtime and timing of liftings, and variations in natural gas sales volumes related to potential downtime at the methanol, LPG and/or LNG plants;
- natural field decline in the deepwater Gulf of Mexico and offshore Equatorial Guinea;
- potential weather-related volume curtailments due to hurricanes in the deepwater Gulf of Mexico, or winter storms and flooding in the DJ Basin and/or Marcellus Shale;
- reliability of support equipment and facilities and/or potential pipeline and processing facility capacity constraints which may cause restrictions or interruptions in production and/or mid-stream processing;
- pending Alba and Alen field unitizations in West Africa;
- potential shut-in of US producing properties if storage capacity becomes unavailable;
- potential drilling and/or completion permit delays due to future regulatory changes; and
- potential purchases of producing properties or divestments of non-core operating assets.

2015 Capital Investment Program Given the current commodity price environment with low prices and an industry cost structure that has yet to fully reset to lower revenue levels, we have designed a substantially-reduced capital investment program that is appropriate for the environment and will be responsive to conditions that develop during 2015. Our preliminary capital program for 2015 will accommodate an investment level of approximately \$2.9 billion which represents an approximate 40% reduction from 2014. The program allocates more than 60% of total investment to core onshore US assets and 35% for global offshore development activities including the deepwater Gulf of Mexico, and approximately 5% for global offshore exploration.

The 2015 investment program allocates approximately \$1.8 billion to onshore US development split between DJ Basin and Marcellus Shale drilling programs and continued infrastructure investments. We and our Marcellus Shale joint venture partner continue to work together to determine the optimal investment plan for 2015 and 2016.

Approximately \$600 million will be invested in the continued development of our sanctioned Gulf of Mexico projects, and additional amounts have been allocated to the Alba and Tamar compression projects.

The 2015 capital investment program is anticipated to exceed operating cash flows during the first half of 2015 and may be funded from cash flows from operations, cash on hand, proceeds from divestments of non-core assets, borrowings under our Credit Facility and/or other financings. We are targeting a cash neutral position, whereby the capital investment program is at, or below, operating cash flows, by the second half of 2015. See Liquidity and Capital Resources – Financing Activities.

Potential for Future Asset Impairment, Dry Hole or Lease Abandonment Expense

**Exploration Activities** We have an active exploratory drilling program. In the event we conclude that an exploratory well did not encounter hydrocarbons or that a discovery is not economically or operationally viable, the associated capitalized exploratory well costs would be charged to expense. For example, during first quarter 2015, we recorded dry hole expense of \$20 million. See also Item 1. Financial Statements - Note 8. Capitalized Exploratory Well Costs. Additionally, we may not conduct exploration activities prior to lease expirations. For example, in the deepwater Gulf of Mexico, while we continue to mature our prospect portfolio, regulations have become more stringent due to the Deepwater Horizon incident in 2010. In some instances, specifically engineered blowout preventers, rigs, and completion equipment may be required for high pressure environments. Regulatory requirements or lack of readily available equipment could prevent us from engaging in future exploration activities during our current lease terms. We currently have capitalized undeveloped leasehold cost of approximately \$308 million related to deepwater Gulf of Mexico prospects that have not yet been drilled. These leases will expire over the years 2015 - 2024.

**Producing Properties** Commodity prices remain volatile. A decline in future crude oil or natural gas prices could result in impairment charges. The cash flow model that we use to assess proved properties for impairment includes numerous assumptions, such as management's estimates of future oil and gas production along with operating and development costs, market outlook on forward commodity prices, and interest rates. All inputs to the cash flow model must be evaluated at each date of estimate. However, a decrease in forward crude oil or natural gas prices alone could

result in an impairment.

In addition, well decommissioning programs, especially in deepwater or remote locations, are often complex and expensive. It may be difficult to estimate timing of actual abandonment activities, which are subject to regulatory approval and the availability of rigs and services. It may be difficult to estimate costs as rigs and services become more expensive in periods of higher demand. Therefore, our ARO estimates may change, sometimes significantly, and could result in asset impairment.

**Divestments** We are currently marketing certain non-core onshore US properties. If properties are reclassified as assets held for sale in the future, they will be valued at the lower of net book value or anticipated sales proceeds less costs to sell.

Table of Contents

Impairment expense would be recorded for any excess of net book value over anticipated sales proceeds less costs to sell. In addition, we would allocate a portion of goodwill to any non-core onshore US property held for sale that constitutes a business, which could potentially decrease any gain or increase any loss recorded on the sale.

In addition, certain assets offshore Israel were classified as held for sale at March 31, 2015. No impairments are indicated at this time. However, failure to achieve acceptable sale terms or delays in closing sales of these properties could result in impairment and/or loss on sale.

Table of Contents

## RESULTS OF OPERATIONS

## Revenues

Revenues were as follows:

(millions)	2015	2014	Increase/(Decrease) from Prior Year
Three Months Ended March 31,			
Oil, Gas and NGL Sales	\$740	\$1,327	(44 )%
Income from Equity Method Investees	18	52	(65 )%
Other	1	—	N/M
Total	\$759	\$1,379	(45 )%

Changes in revenues are discussed below.

## Oil, Gas and NGL Sales

We generally sell crude oil, natural gas, and NGLs under two types of agreements, which are common in our industry. Both types of agreements may include transportation charges. One type of agreement is a netback agreement, under which we sell crude oil and natural gas at the wellhead and receive a price, net of transportation expense incurred by the purchaser. In this case, we record crude oil and natural gas revenue at the net price we received from the purchaser. In the case of NGLs, we may receive a price from the purchaser, which is net of processing costs. In this case, we record NGL revenue at the net price we receive from the purchaser. The second type of agreement is one whereby we pay transportation expense directly. In that case, transportation expense is included within production expense in our consolidated statements of operations.

In addition, commodity prices we receive may be reduced by location basis differentials, which can be significant. As a result of both netback agreements and location basis differentials, our reported sales prices may differ significantly from published commodity price benchmarks for the same period.

Average daily sales volumes and average realized sales prices were as follows:

	Sales Volumes		NGLs (MBbl/d)	Total (MBoe/d) <sup>(1)</sup>	Average Realized Sales Prices		
	Crude Oil & Condensate (MBbl/d)	Natural Gas (MMcf/d)			Crude Oil & Condensate (Per Bbl)	Natural Gas (Per Mcf)	NGLs (Per Bbl)
Three Months Ended March 31, 2015							
United States	73	619	25	201	\$44.39	\$2.72	\$14.65
Equatorial Guinea <sup>(2)</sup>	30	231	—	68	49.65	0.27	—
Israel	—	242	—	40	—	5.45	—
Other International <sup>(3)</sup>	1	—	—	1	52.89	—	—
Total Consolidated Operations	104	1,092	25	310	45.96	2.81	14.65
Equity Investees <sup>(4)</sup> 2	—	—	6	8	48.63	—	30.17

Equity Investees <sup>(4)</sup> 2	—	—	5	7	104.71	—	74.51

Edgar Filing: NOBLE ENERGY INC - Form 10-Q

Total	105	943	23	286	\$100.30	\$3.83	\$51.54
-------	-----	-----	----	-----	----------	--------	---------

(1) Natural gas is converted on the basis of six Mcf of gas per one barrel of crude oil equivalent. This ratio reflects an energy content equivalency and not a price or revenue equivalency. Given commodity price disparities, the price for a barrel of crude oil equivalent for both natural gas and NGL are significantly less than the price for a barrel of crude oil.

29

---

Table of Contents

Natural gas from the Alba field in Equatorial Guinea is under contract for \$0.25 per MMBtu to a methanol plant, (2) an LPG plant, an LNG plant and a power generation plant. The methanol and LPG plants are owned by affiliated entities accounted for under the equity method of accounting.

(3) Other International includes primarily China (through June 30, 2014). North Sea sales volumes for 2014 and 2015 were de minimis.

(4) Volumes represent sales of condensate and LPG from the Alba plant in Equatorial Guinea. See Income from Equity Method Investees, below.

An analysis of revenues from sales of crude oil, natural gas and NGLs is as follows:

(millions)	Sales Revenues			
	Crude Oil & Condensate	Natural Gas	NGLs	Total
Three Months Ended March 31, 2014	\$928	\$325	\$74	\$1,327
Changes due to				
Increase in Sales Volumes	11	51	24	86
Decrease in Sales Prices	(508	) (100	) (65	) (673
Three Months Ended March 31, 2015	\$431	\$276	\$33	\$740

Crude Oil and Condensate Sales – Revenues from crude oil and condensate sales decreased by \$497 million or 54% during first quarter of 2015 as compared with 2014 due to the following:

a 54% decrease in total consolidated average realized prices primarily due to the NYMEX WTI crude oil price decline between June and December 2014, with a similar Brent crude oil price decline, with sales prices continuing to be weak in first quarter 2015;

natural field decline in the deepwater Gulf of Mexico;

lower sales volumes due to the sale of our China assets at the end of second quarter 2014; and

a volume reduction in West Africa due to natural field decline at Aseng;

partially offset by:

higher sales volumes for crude oil and condensate in the DJ Basin and Marcellus Shale.

Natural Gas Sales – Revenues from natural gas sales decreased by \$49 million or 15% during first quarter 2015 as compared with 2014 due to the following:

a 43% decrease in US natural gas prices;

partially offset by:

higher sales volumes in the DJ Basin and Marcellus Shale primarily attributable to our horizontal drilling program; and

higher sales volumes in the Eastern Mediterranean from the Tamar field.

NGL Sales – The majority of our US NGL production is currently from the DJ Basin. Additional NGL production from the Marcellus Shale added 4 MBbl/d during first quarter 2015 as compared with 2014, primarily due to increased production from the wet gas acreage. NGL sales in the DJ Basin increased by 2 MBbl/d during first quarter 2015 as compared with 2014. Additionally, consolidated average sales prices decreased 67% for the first three months of 2015 compared to the first three months of 2014.

Income from Equity Method Investees We have interests in equity method investees that operate midstream assets onshore US and West Africa. Equity method investments are included in other noncurrent assets in our consolidated balance sheets, and our share of earnings is reported as income from equity method investees in our consolidated statements of operations. Within our consolidated statements of cash flows, activity is reflected within cash flows provided by operating activities and cash flows provided by (used in) investing activities.

We recorded income of \$11 million related to our investments in CONE Gathering LLC and CONE Midstream Partners LP in first quarter 2015. Our West Africa geographical segment had an 86% decrease in equity method investee income, as compared to first quarter 2014. This decrease is due to expenses related to the 45-day AMPCO methanol plant turnaround. Production at AMPCO was shut down during first quarter 2015, which resulted in a quarterly loss.

Table of Contents

## Operating Costs and Expenses

Operating costs and expenses were as follows:

(millions)	2015	2014	Increase (Decrease) from Prior Year	
Three Months Ended March 31,				
Production Expense	\$245	\$229	7	%
Exploration Expense	65	74	(12)	)%
Depreciation, Depletion and Amortization	454	425	7	%
General and Administrative	94	140	(33)	)%
Asset Impairments	27	97	(72)	)%
Other Operating (Income) Expense, Net	8	10	(20)	)%
Total	\$893	\$975	(8)	)%

Changes in operating costs and expenses are discussed below.

Production Expense Components of production expense were as follows:

(millions, except unit rate)	Total per BOE <sup>(1)</sup>	Total	United States	Equatorial Guinea	Israel	Other Int'l, Corporate <sup>(2)</sup>
Three Months Ended March 31, 2015						
Lease Operating Expense <sup>(3)</sup>	\$5.61	\$157	\$103	\$34	\$12	\$8
Production and Ad Valorem Taxes	1.16	32	32	—	—	—
Transportation and Gathering Expense	2.00	56	56	—	—	—
Total Production Expense	\$8.77	\$245	\$191	\$34	\$12	\$8
Total Production Expense per BOE		\$8.77	\$10.55	\$5.55	\$3.27	N/M
Three Months Ended March 31, 2014						
Lease Operating Expense <sup>(3)</sup>	\$5.66	\$142	\$85	\$31	\$12	\$14
Production and Ad Valorem Taxes	1.96	49	40	—	—	9
Transportation and Gathering Expense	1.52	38	37	—	—	1
Total Production Expense	\$9.14	\$229	\$162	\$31	\$12	\$24
Total Production Expense per BOE		\$9.14	\$11.04	\$4.67	\$3.65	N/M

N/M Amount is not meaningful.

<sup>(1)</sup> Consolidated unit rates exclude sales volumes and expenses attributable to equity method investees.<sup>(2)</sup> Other International includes primarily China (through June 30, 2014) and corporate expenditures.<sup>(3)</sup> Lease operating expense includes oil and gas operating costs (labor, fuel, repairs, replacements, saltwater disposal and other related lifting costs) and workover expense.

For first quarter 2015, total production expense increased as compared with 2014 due to the following:

- an increase of \$15 million in lease operating expense due to increased production in the DJ Basin and Marcellus Shale; and

- an increase in transportation and gathering expenses due to an increase in onshore US production.

partially offset by:

- decreased lease operating expense due to the sale of our China assets at the end of the second quarter 2014; and

- decreased production and ad valorem taxes due to decreased revenues resulting from lower realized prices in the US as well as the sale of our China assets at the end of the second quarter 2014.

Table of Contents

Exploration Expense Components of exploration expense were as follows:

(millions)	Total	United States	West Africa <sup>(1)</sup>	Eastern Mediterranean <sup>(2)</sup>	Other Int'l, Corporate <sup>(3)</sup>

Three Months Ended March 31, 2014					
Dry Hole Cost	\$2	\$3	\$—	\$—	\$(1
Seismic	23	7	—	1	15
Staff Expense	35	8	2	3	22
Other	14	14	—	—	—
Total Exploration Expense	\$74	\$32	\$2	\$4	\$36

<sup>(1)</sup> West Africa includes Equatorial Guinea, Cameroon, Sierra Leone, and Gabon.

<sup>(2)</sup> Eastern Mediterranean includes Israel and Cyprus.

<sup>(3)</sup> Other International includes the Falkland Islands and other new ventures.

Exploration expense for first quarter 2015 included:

\$13 million of dry hole cost related primarily to onshore US exploratory wells; and salaries and related expenses for corporate exploration and new ventures personnel.

Exploration expense for first quarter 2014 included the following:

\$12 million of seismic expense in the Falkland Islands; and salaries and related expenses for corporate exploration and new ventures personnel.

Depreciation, Depletion and Amortization DD&A expense was as follows:

	Three Months Ended March 31,	
	2015	2014
DD&A Expense (millions) <sup>(1)</sup>	\$454	\$425
Unit Rate per BOE <sup>(2)</sup>	\$16.24	\$16.95

<sup>(1)</sup> For DD&A expense by geographical area, see Item 1. Financial Statements – Note 12. Segment Information.

<sup>(2)</sup> Consolidated unit rates exclude sales volumes and expenses attributable to equity method investees.

Total DD&A expense for first quarter 2015 increased as compared with 2014 due to the following:

• increase in the DJ Basin and the Marcellus Shale due to higher sales volumes;

partially offset by:

• decrease due to the sale of our China assets during 2014.

The decrease in the unit rate per BOE for the first quarter 2015 as compared with 2014 was due primarily to the change in mix of production. Higher-cost production volumes in the deepwater Gulf of Mexico and DJ Basin were offset by an increase in lower cost volumes produced at Tamar, offshore Israel.

Our year-end 2014 proved reserves estimates, upon which we based our first quarter 2015 DD&A calculation, were based on the previous 12-month average commodity prices. Therefore, the significant decline in crude oil prices at the end of 2014 and the continued price weakness into 2015, are not yet fully reflected in our proved reserves estimates. We expect to update our proved reserves estimates as of June 30, 2015. A decline in proved reserves estimates, caused by decreases in the 12-month average commodity prices as of June 30, 2015, could result in an increase in DD&A expense during second quarter 2015.

Table of Contents

General and Administrative Expense General and administrative expense (G&A) was as follows:

	Three Months Ended March 31,	
	2015	2014
G&A Expense (millions)	\$94	\$140
Unit Rate per BOE <sup>(1)</sup>	\$3.36	\$5.57

<sup>(1)</sup> Consolidated unit rates exclude sales volumes and expenses attributable to equity method investees.

G&A expense for first quarter 2015 decreased as compared with 2014 primarily due to the following:

• a \$33 million decrease in short term incentive compensation and related payroll burden;

• an \$8 million decrease in contractor and consulting services; and

• reductions in travel and other discretionary expenses.

Asset Impairment Expense Asset impairment expense was as follows:

	Three Months Ended March 31,	
(millions)	2015	2014
Asset Impairments	\$27	\$97

See Item 1. Financial Statements – Note 2. Basis of Presentation, Note 4. Asset Impairments and Note 7. Fair Value Measurements and Disclosures.

Other (Income) Expense

Other (income) expense was as follows:

	Three Months Ended March 31,	
(millions)	2015	2014
(Gain) Loss on Commodity Derivative Instruments	\$(150 )	\$75
Interest, Net of Amount Capitalized	57	47
Other Non-Operating (Income) Expense, Net	1	5
Total	\$(92 )	\$127

(Gain) Loss on Commodity Derivative Instruments (Gain) Loss on commodity derivative instruments is a result of mark-to-market accounting. Many factors impact a gain or loss on commodity derivative instruments including: increases and decreases in the commodity forward price curves compared to the terms of our executed commodity instruments; increases in notional volumes; and the mix of instruments between NYMEX WTI, Dated Brent and NYMEX Henry Hub commodities. See Item 1. Financial Statements – Note 5. Derivative Instruments and Hedging Activities and Note 7. Fair Value Measurements and Disclosures.

Interest Expense and Capitalized Interest Interest expense and capitalized interest were as follows:

	Three Months Ended March 31,	
(millions, except unit rate)	2015	2014
Interest Expense, Gross	\$93	\$81
Capitalized Interest	(36 )	(34 )
Interest Expense, Net	\$57	\$47
Unit Rate per BOE <sup>(1)</sup>	\$2.05	\$1.89

<sup>(1)</sup> Consolidated unit rates exclude sales volumes and expenses attributable to equity method investees.

The increase in interest expense, gross, for first quarter 2015 as compared with 2014 is due to the issuance of new senior debt in November 2014. During first quarter 2015, we drew down and repaid amounts under our Credit Facility. There have been no other significant changes in our debt.

Table of Contents

Income Tax Provision

See Item 1. Financial Statements – Note 11. Income Taxes for a discussion of the change in our effective tax rate for first quarter 2015 as compared with 2014.

LIQUIDITY AND CAPITAL RESOURCES

Capital Structure/Financing Strategy

In seeking to effectively fund and monetize our discovered hydrocarbons, we employ a capital structure and financing strategy designed to provide sufficient liquidity throughout the volatile commodity price cycle, including the current downturn in crude oil prices. Specifically, we strive to retain the ability to fund long cycle, multi-year, capital intensive development projects throughout a range of scenarios, while also funding a continuing exploration program and maintaining capacity to capitalize on financially attractive periodic mergers and acquisitions activity.

We endeavor to maintain an investment grade debt rating in service of these objectives, while delivering competitive returns and a growing dividend. We utilize a commodity price hedging program to reduce the impacts of commodity price volatility and enhance the predictability of cash flows along with a risk and insurance program to protect against disruption to our cash flows and the funding of our business.

We strive to maintain a minimum liquidity level to address volatility and risk. Traditional sources of our liquidity are cash flows from operations, cash on hand, available borrowing capacity under our Credit Facility, and proceeds from sales of non-core properties.

We occasionally access the capital markets to ensure adequate liquidity exists in the form of unutilized capacity under our Credit Facility or to refinance scheduled debt maturities. On March 3, 2015, we closed an underwritten public offering of 21,000,000 shares of common stock, par value \$0.01 per share, at a price to the public of \$47.50 per share. In addition, on March 25, 2015, we completed the issuance of an additional 3,150,000 shares of common stock, par value \$0.01 per share, in connection with the exercise of the option of the underwriters to purchase additional shares of common stock. The aggregate net proceeds of the offerings were approximately \$1.1 billion (after deducting underwriting discounts and commissions and estimated offering expenses). We used approximately \$150 million of the net proceeds to repay outstanding indebtedness under our revolving credit facility and the remainder will be used for general corporate purposes, including the funding of our capital investment program.

We also consider repatriations of foreign cash to increase our financial flexibility and fund our capital investment program to the extent such cash is not required to fund foreign investment projects and would not incur material incremental US tax. We evaluate potential strategic farm-out arrangements of our working interests for reimbursement of our capital spending and may consider other sources of funding.

Cash on hand at March 31, 2015 totaled \$1.7 billion, which includes both domestic and foreign cash, and there were no amounts outstanding under our Credit Facility. See Item 1. Financial Statements – Note 6. Debt and Credit Facility, below.

Expanded development in the DJ Basin and Marcellus Shale, investment in major deepwater development projects, and planned exploration and appraisal drilling activities, as well as the fourth quarter 2014 decline in crude oil prices, resulted in capital expenditures exceeding cash flows from operating activities for first quarter 2015. The extent to which capital investment will exceed operating cash flows depends on the pace of future DJ Basin and Marcellus Shale development activities, timing of future development project sanction, the results of exploration activities, and new business opportunities, as well as external factors such as commodity prices, among others. In particular, the sustained crude oil price decline has a significant negative impact on our cash flows. However, our financial capacity, coupled with our diversified portfolio, provides us with flexibility in our investment decisions including execution of our major development projects and exploration activity.

To support our investment program, we expect that higher production resulting from our core onshore US development programs combined with new production from the Big Bend and Dantzler development projects and additional production from the Tamar compression project, will result in an increase in cash flows which will be available to meet a portion of future capital commitments in 2016 and subsequent years. See Results of Operations above.

We are currently evaluating potential development and/or financing scenarios for our significant natural gas discoveries offshore Eastern Mediterranean. The magnitude of these discoveries presents technical and financial challenges for us due to the large-scale development requirements. Each of these development options, including the development of Leviathan Phase 1, would require a multi-billion dollar investment and require a number of years to complete. We are currently working to resolve antitrust and other regulatory matters with the Israeli government to enable Leviathan and other development to move forward. See Executive Overview – Update on Core Area – Israel, above.

Table of Contents

**Pension Plan Termination** We are in the process of terminating our defined benefit pension plan. The Internal Revenue Service has approved the termination, and we expect to liquidate the associated pension obligation through lump-sum payments to participants or the purchase of annuities on their behalf.

As of December 31, 2014, the latest actuarial measurement date for the pension plan, the accumulated benefit obligation totaled \$287 million, and the fair value of plan assets was \$242 million. Therefore, we expect to make additional contributions to the plan of approximately \$50 million during the period leading up to final termination and distribution to the extent necessary to fund the net obligation.

In addition, upon termination of the pension plan, all unamortized prior service cost and net actuarial loss remaining in accumulated other comprehensive loss will be charged to expense. This amount totaled approximately \$82 million as of March 31, 2015.

**Available Liquidity** Information regarding cash and debt balances is as follows:

	March 31, 2015	December 31, 2014		
(millions, except percentages)				
Cash and Cash Equivalents	\$ 1,709	\$ 1,183		
Amount Available to be Borrowed Under Credit Facility <sup>(1)</sup>	4,000	4,000		
Total Liquidity	\$5,709	\$5,183		
Total Debt <sup>(2)</sup>	\$6,203	\$6,197		
Total Shareholders' Equity	11,357	10,325		
Ratio of Debt-to-Book Capital <sup>(3)</sup>	35	% 38		%

<sup>(1)</sup> See Credit Facility, below.

<sup>(2)</sup> Total debt includes capital lease and other obligations and excludes unamortized debt discount.

We define our ratio of debt-to-book capital as total debt (which includes long-term debt excluding unamortized

<sup>(3)</sup> discount, the current portion of long-term debt, and short-term borrowings) divided by the sum of total debt plus shareholders' equity.

**Cash and Cash Equivalents** We had approximately \$1.7 billion in cash and cash equivalents at March 31, 2015, primarily denominated in US dollars and invested in money market funds and short-term deposits with major financial institutions. Approximately \$791 million of this cash is attributable to our foreign subsidiaries and a portion would be subject to US income taxes if repatriated.

**Credit Facility** Our Credit Facility matures on October 3, 2018. The commitment is \$4.0 billion through the maturity date of the Credit Facility. As of March 31, 2015, no amounts were outstanding under the Credit Facility. Borrowings under our Credit Facility subject us to interest rate risk. See Item 1. Financial Statements –Note 6. Debt and Item 3. Quantitative and Qualitative Disclosures About Market Risk.

**Commodity Derivative Instruments** We use various derivative instruments in connection with anticipated crude oil and natural gas sales to minimize the impact of product price fluctuations and ensure cash flow for future capital needs. Such instruments may include variable to fixed price commodity swaps, two-way collars, three-way collars and/or extendable swaps.

Current period settlements on commodity derivative instruments impact our liquidity, since we are either paying cash to, or receiving cash from, our counterparties.

A significant portion of the hedged volumes are attributable to three-way collars. When commodities trade below the strike price of the sold put option contract of the three-way collar, the cash settlements received by us are limited. However, we still receive the cash market price plus the delta between the purchased put option floor price of the two-way collar contract and the sold put option strike price.

We net settle by counterparty based on netting provisions within the master agreements. None of our counterparty agreements contain margin requirements.

Commodity derivative instruments are recorded at fair value in our consolidated balance sheets, and changes in fair value are recorded in earnings in the period in which the change occurs. As of March 31, 2015, the fair value of our commodity derivative assets was \$830 million and we had no derivative liabilities (after consideration of netting provisions within our master agreements). See Item 1. Financial Statements –Note 7. Fair Value Measurements and

Disclosures for a description of the methods we use to estimate the fair values of commodity derivative instruments and Credit Risk, below.

**Credit Risk** We monitor the creditworthiness of our trade creditors, joint venture partners, hedging counterparties, and financial institutions on an ongoing basis. Some of these entities are not as creditworthy as we are and may experience credit downgrades or liquidity problems. Counterparty credit downgrades or liquidity problems could result in a delay in our receiving proceeds from commodity sales, reimbursement of joint venture costs, and potential delays in our major development

Table of Contents

projects. We are unable to predict sudden changes in a party's creditworthiness or ability to perform. Even if we do accurately predict such sudden changes, our ability to negate these risks may be limited and we could incur significant financial losses.

In addition, nonoperating partners often must obtain financing for their share of capital cost for development projects. A partner's inability to obtain financing could result in a delay of our joint development projects.

Credit enhancements have been obtained from some parties in the form of parental guarantees, letters of credit or credit insurance; however, not all of our counterparty credit is protected through guarantees or credit support.

Nonperformance by a trade creditor, joint venture partner, hedging counterparty or financial institution could result in significant financial losses.

**Contractual Obligations**

CONSOL Carried Cost Obligation See Item 1. Financial Statements - Note 13. Commitments and Contingencies.

**Exploration Commitments** The terms of some of our PSCs, licenses or concession agreements require us to conduct certain exploration activities, including drilling one or more exploratory wells or acquiring seismic data, within specific time periods. At March 31, 2015, we have the following commitments: remaining three-well obligation in Nevada; one-well obligation offshore Cameroon; one-well obligation offshore Cyprus; two-well obligation offshore Falkland Islands; and 3D seismic obligation offshore Gabon. These obligations extend over a period ranging from one to four years. Failure to conduct exploration activities within the prescribed periods could lead to loss of leases or exploration rights.

**Ratings Triggers** We do not have triggers on any of our corporate debt that would cause an event of default in the case of a downgrade of our credit rating. In addition, there are no existing ratings triggers in any of our commodity hedging agreements that would require the posting of collateral. However, a downgrade or other negative rating action could affect our requirements to post collateral as financial assurance of performance under certain other contractual arrangements such as pipeline transportation contracts, crude oil and natural gas sales contracts, work commitments and certain abandonment obligations.

**Cash Flows**

Cash flow information is as follows:

	Three Months Ended March 31,	
	2015	2014
(millions)		
Total Cash Provided By (Used in)		
Operating Activities	\$541	\$929
Investing Activities	(1,036)	(1,078)
Financing Activities	1,021	386
Increase in Cash and Cash Equivalents	\$526	\$237

**Operating Activities** Net cash provided by operating activities for the first three months of 2015 decreased significantly as compared with 2014. Significant decreases in the average realized sales prices of crude oil and domestic natural gas were partially offset by increases in sales volumes, decreases in production expenses, and a decrease in general and administrative expense. Working capital changes contributed \$18 million of positive operating cash flow in the first three months of 2015 as compared with a positive impact of \$126 million in the first three months of 2014.

**Investing Activities** Our investing activities include capital spending on a cash basis for oil and gas properties and investments in unconsolidated subsidiaries accounted for by the equity method. These investing activities may be offset by proceeds from property sales or dispositions, including farm-in arrangements, which may result in reimbursement for capital spending that had occurred in prior periods. Capital spending for property, plant and equipment decreased by \$47 million during the first three months of 2015 as compared with 2014, primarily due to a reduced capital spending program. Investing activities included \$44 million in CONE Gathering LLC during the first three months of 2015 as compared with \$12 million in the first three months of 2014. We received \$119 million in proceeds from asset divestitures during the first three months of 2015, as compared with \$92 million during the same

period in 2014.

**Financing Activities** Our financing activities include the issuance or repurchase of our common stock, payment of cash dividends on our common stock, the borrowing of cash and the repayment of borrowings. During the first three months of 2015, funds were provided by cash proceeds from the issuance of shares of Company common stock to the public (\$1.1 billion) and the exercise of stock options (\$4 million). We used cash to pay dividends on our common stock (\$64 million), make principal payments related to capital lease obligations (\$19 million) and repurchase shares of our common stock (\$12 million).

In comparison, during the first three months of 2014, funds were provided by cash proceeds from, and tax benefits related to, the exercise of stock options (\$16 million) and net cash proceeds from our Credit Facility (\$450 million). We also used cash to

36

---

Table of Contents

pay dividends on our common stock (\$50 million), make principal payments related to capital lease obligations (\$15 million) and repurchase shares of our common stock (\$15 million).

See Item 1. Financial Statements – Consolidated Statements of Cash Flows.

## Investing Activities

Acquisition, Capital and Exploration Expenditures Information for investing activities (on an accrual basis) is as follows:

	Three Months Ended March 31,	
	2015	2014
(millions)		
Acquisition, Capital and Exploration Expenditures		
Unproved Property Acquisition <sup>(1)</sup>	\$26	\$55
Exploration	69	90
Development	699	703
Midstream	58	44
Corporate and Other	23	47
Total	\$875	\$939
Other		
Investment in Equity Method Investee <sup>(2)</sup>	\$44	\$12
Increase in Capital Lease Obligations	20	5

Unproved property acquisition cost for 2015 includes \$11 million in the DJ Basin and \$15 million in the Marcellus

<sup>(1)</sup> Shale. Unproved property acquisition cost for 2014 includes \$20 million in the DJ Basin and \$35 million in the Marcellus Shale.

<sup>(2)</sup> Investment in equity method investee represents contributions to CONE Gathering LLC which owns and operates the natural gas gathering infrastructure associated with our Marcellus Shale joint venture.

Total expenditures decreased first quarter 2015 as compared with 2014 due to our reduced capital spending program. See Operating Outlook – 2015 Capital Investment Program, above.

## Financing Activities

Long-Term Debt Our principal source of liquidity is our Credit Facility that matures October 3, 2018. At March 31, 2015, there were no borrowings outstanding under the Credit Facility, leaving \$4.0 billion available for use. We expect to use the Credit Facility to fund our capital investment program, and may periodically borrow amounts for working capital purposes. See Item 1 Financial Statements – Note 6. Debt.

Our outstanding fixed-rate debt (excluding capital lease and other obligations) totaled approximately \$5.8 billion at March 31, 2015. The weighted average interest rate on fixed-rate debt was 5.69%, with maturities ranging from March 2019 to August 2097.

Dividends We paid total cash dividends of 18 cents per share of our common stock during the first three months of 2015 and 14 cents per share during the first three months of 2014.

On April 27, 2015, the Board of Directors declared a quarterly cash dividend of 18 cents per common share, which will be paid on May 26, 2015 to shareholders of record on May 11, 2015. The amount of future dividends will be determined on a quarterly basis at the discretion of our Board of Directors and will depend on earnings, financial condition, capital requirements and other factors.

Exercise of Stock Options We received cash proceeds from the exercise of stock options of \$4 million during the first three months of 2015 and \$10 million during the first three months of 2014.

Common Stock Repurchases We receive shares of common stock from employees for the payment of withholding taxes due on the vesting of restricted shares issued under stock-based compensation plans. We received 249,122 shares with a value of \$12 million during the first three months of 2015 and 247,674 shares with a value of \$15 million during the first three months of 2014.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Commodity Price Risk

**Derivative Instruments Held for Non-Trading Purposes** We are exposed to market risk in the normal course of business operations, and the volatility of crude oil and natural gas prices continues to impact the oil and gas industry. Due to the volatility of crude oil and natural gas prices, we continue to use derivative instruments as a means of managing our exposure to price changes.

At March 31, 2015, we had entered into various commodity derivative instruments related to crude oil and natural gas sales. Changes in fair value of commodity derivative instruments are reported in earnings in the period in which they occur. Our open commodity derivative instruments were in a net asset position with a fair value of \$830 million. Based on the March 31, 2015 published commodity futures price curves for the underlying commodities, a hypothetical price increase of \$10.00 per Bbl for crude oil would decrease the fair value of our net commodity derivative asset by approximately \$194 million. A hypothetical price increase of \$0.50 per MMBtu for natural gas would decrease the fair value of our net commodity derivative asset by approximately \$42 million. Our derivative instruments are executed under master agreements which allow us, in the event of default, to elect early termination of all contracts with the defaulting counterparty. If we choose to elect early termination, all asset and liability positions with the defaulting counterparty would be net cash settled at the time of election. See Item 1. Financial Statements – Note 5. Derivative Instruments and Hedging Activities.

Interest Rate Risk

Changes in interest rates affect the amount of interest we pay on borrowings under our Credit Facility and the amount of interest we earn on our short-term investments.

At March 31, 2015, we had approximately \$5.8 billion (excluding capital lease and other obligations) of long-term debt outstanding. Of this amount, \$5.8 billion was fixed-rate debt with a weighted average interest rate of 5.69%. Although near term changes in interest rates may affect the fair value of our fixed-rate debt, they do not expose us to the risk of earnings or cash flow loss.

There was no variable-rate debt outstanding at March 31, 2015. Variable-rate debt exposes us to the risk of earnings or cash flow loss due to increases in market interest rates. We are also exposed to interest rate risk related to our interest-bearing cash and cash equivalents balances. As of March 31, 2015, our cash and cash equivalents totaled approximately \$1.7 billion, approximately 72% of which was invested in money market funds and short-term investments with major financial institutions. A change in the interest rate applicable to our variable-rate debt or our short term investments would have a de minimis impact. We currently have no interest rate derivative instruments outstanding. However, we may enter into interest rate derivative instruments in the future if we determine that it is necessary to invest in such instruments in order to mitigate our interest rate risk.

Foreign Currency Risk

The US dollar is considered the functional currency for each of our international operations. Substantially all of our international crude oil, natural gas and NGL production is sold pursuant to US dollar denominated contracts. Transactions, such as operating costs and administrative expenses that are paid in a foreign currency, are remeasured into US dollars and recorded in the financial statements at prevailing currency exchange rates. Certain monetary assets and liabilities, such as taxes payable in foreign tax jurisdictions, are settled in the foreign local currency. A reduction in the value of the US dollar against currencies of other countries in which we have material operations could result in the use of additional cash to settle operating, administrative, and tax liabilities.

Net transaction gains and losses were de minimis for first quarter of each of 2015 and 2014.

We currently have no foreign currency derivative instruments outstanding. However, we may enter into foreign currency derivative instruments (such as forward contracts, costless collars or swap agreements) in the future if we determine that it is necessary to invest in such instruments in order to mitigate our foreign currency exchange risk.

Disclosure Regarding Forward-Looking Statements

This quarterly report on Form 10-Q contains forward-looking statements within the meaning of the federal securities laws. Forward-looking statements give our current expectations or forecasts of future events. These forward-looking statements include, among others, the following:

• our growth strategies;

- our ability to successfully and economically explore for and develop crude oil and natural gas resources;
- anticipated trends in our business;
- our future results of operations;
- our liquidity and ability to finance our exploration and development activities;

Table of Contents

market conditions in the oil and gas industry;  
our ability to make and integrate acquisitions;  
the impact of governmental fiscal terms and/or regulation, such as those involving the protection of the environment or marketing of production, as well as other regulations; and  
access to resources.

Forward-looking statements are typically identified by use of terms such as “may,” “will,” “expect,” “believe,” “anticipate,” “estimate,” “intend,” and similar words, although some forward-looking statements may be expressed differently. These forward-looking statements are made based upon our current plans, expectations, estimates, assumptions and beliefs concerning future events impacting us and therefore involve a number of risks and uncertainties. We caution that forward-looking statements are not guarantees and that actual results could differ materially from those expressed or implied in the forward-looking statements. You should consider carefully the statements under Item 1A. Risk Factors included in our Annual Report on Form 10-K for the year ended December 31, 2014, which describe factors that could cause our actual results to differ from those set forth in the forward-looking statements. Our Annual Report on Form 10-K for the year ended December 31, 2014 is available on our website at [www.nobleenergyinc.com](http://www.nobleenergyinc.com).

Item 4. Controls and Procedures

Based on the evaluation of our disclosure controls and procedures by our principal executive officer and our principal financial officer, as of the end of the period covered by this quarterly report, each of them has concluded that our disclosure controls and procedures, as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended, are effective. There were no changes in internal control over financial reporting that occurred during the quarter covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

## Part II. Other Information

## Item 1. Legal Proceedings

**Colorado Air Matter** In April 2015, we entered into a joint consent decree (Consent Decree) with the US Environmental Protection Agency, US Department of Justice, and State of Colorado to improve emission control systems at a number of our condensate storage tanks that are part of our upstream oil and natural gas operations within the Non-Attainment Area of the DJ Basin. The Consent Decree is subject to a 30 day public comment period before it may be considered for entry by the Court.

The Consent Decree, which alleges violations of the Colorado Air Pollution Prevention and Control Act and Colorado's federal approved State Implementation Plan, specifically Colorado Air Quality Control Commission Regulation Number 7, will require the performance of certain injunctive relief activities, completion of mitigation projects and supplemental environmental projects (SEP), and payment of a civil penalty. The value of the settlement consists of \$4.95 million in civil penalties, \$4.5 million in mitigation projects, and \$4 million in SEPs. The value associated with the injunctive relief is not yet quantifiable as it will be determined in accordance with the outcome of evaluations on the adequate design, operation, and maintenance of certain aspects of tank systems to handle potential peak instantaneous vapor flow rates between now and mid-2017.

Compliance with the Consent Decree could result in the temporary shut in or permanent plugging and abandonment of certain wells and associated tank batteries. The Consent Decree sets forth a detailed compliance schedule with deadlines for achievement of milestones through early 2019. The Consent Decree further contains requirements for ongoing inspection and monitoring, in addition to existing Colorado regulatory requirements. Inspection and monitoring findings may influence decisions to temporarily shut in or permanently plug and abandon wells and associated tank batteries.

We have concluded that the penalties, injunctive relief, and mitigation expenditures that resulted from this settlement did not have a material adverse effect on our financial position, results of operations or cash flows.

## Item 1A. Risk Factors

There have been no material changes from the risk factors disclosed in Item 1A. Risk Factors of our Annual Report on Form 10-K for the year ended December 31, 2014.

## Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The following table sets forth, for the periods indicated, our share repurchase activity:

Period	Total Number of Shares Purchased <sup>(1)</sup>	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs (in thousands)
1/1/2015 - 1/31/2015	48,403	\$47.74	—	—
2/1/2015 - 2/28/2015	199,705	47.74	—	—
3/1/2015 - 3/31/2015	1,014	46.94	—	—
Total	249,122	\$47.74	—	—

<sup>(1)</sup> Stock repurchases during the period related to common stock received by us from employees for the payment of withholding taxes due on shares of common stock issued under stock-based compensation plans, which vested

primarily on January 31 and February 1, 2015.
