Dr. Eric Van Cutsem, presenter at the June 2008 American

Society of Clinical Oncology meeting

**FDA recommends genetic screening prior to treatment with Abacavir**

ROCKVILLE, Md -- July 24, 2008 -- The US Food and Drug Administration (FDA) has issued an alert regarding serious, and sometimes fatal, hypersensitivity reactions (HSRs) caused by abacavir (Ziagen) therapy in patients with a particular human leukocyte antigen (HLA) allele, HLA-B\* 5701.

Genetic tests for HLA-B\*5701 are already available, and all patients should be screened for the HLA-B\*5701 allele before starting or restarting treatment with abacavir or abacavir-containing medications.

**FDA has approved the expanded use of Selzentry to include adult patients with CCR5-tropic HIV-1 virus who are starting treatment for the first time.**
