MARKET VECTORS PREFERRED SECURITIES EX FINANCIALS ETF

Ticker: PFXF®
 Principal U.S. Listing Exchange: NYSE Arca, Inc.
 SUMMARY PROSPECTUS
 SEPTEMBER 1, 2013

PFXFSUM

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <http://www.vaneck.com/library/etfs/>. You can also get this information at no cost by calling 888.MKT.VCTR, or by sending an email request to info@vaneck.com. The Fund's prospectus and statement of additional information, both dated September 1, 2013, are incorporated by reference into this summary prospectus.

INVESTMENT OBJECTIVE

Market Vectors Preferred Securities ex Financials ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Wells Fargo® Hybrid and Preferred Securities ex Financials Index (the Preferred Securities Index).

FUND FEES AND EXPENSES

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None
 Annual Fund Operating Expenses
 (*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.40 %
Other Expenses	0.11 %
Total Annual Fund Operating Expenses ^(a)	0.51 %
Fee Waivers and Expense Reimbursement ^(a)	(0.11)%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.40 %

^(a) Van Eck
 Associates
 Corporation
 (the Adviser)

has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.40% of the Fund's average daily net assets per year until at least September 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

Edgar Filing: MARKET VECTORS ETF TRUST - Form 497K

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 41
3	\$ 152
5	\$ 274
10	\$ 630

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example,

vaneck.com

1

may affect the Fund's performance. During the period July 16, 2012 (the Fund's commencement of operations) through April 30, 2013, the Fund's portfolio turnover rate was 21% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Preferred Securities Index is comprised of convertible or exchangeable and non-convertible preferred securities listed on U.S. exchanges, including securities that, in Wells Fargo & Company's (the Index Provider's) judgment, are functionally equivalent to preferred securities including, but not limited to, convertible securities, depositary preferred securities and perpetual subordinated debt, excluding securities with a financial industry sector classification (collectively, Preferred Securities). Preferred Securities generally pay fixed or variable rate distributions to preferred shareholders and such shareholders have preference over common shareholders in the payment of distributions and in the event of a liquidation of the issuer's assets, but are junior to most other forms of debt, including senior and subordinated debt. Functionally equivalent securities to Preferred Securities are securities that are issued and trade in similar manner to traditional perpetual preferred securities. Such securities generally have a lower par amount, may allow the issuer to defer interest or dividend payments and are equal to preferred shareholders or the lowest level of subordinated debt in terms of claims to the issuer's assets in the event of liquidation. Preferred Securities issued by real estate investment trusts (REITs) are not considered to be securities with a financial industry sector classification as determined by the Bloomberg Professional® service, and therefore may be included in the Preferred Securities Index. Preferred Securities may be subject to redemption or call provisions and may include those issued by small- and medium-capitalization companies. As of June 30, 2013, the Preferred Securities Index included 78 U.S.-listed securities of 55 issuers. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Preferred Securities Index by investing in a portfolio of securities that generally replicates the Preferred Securities Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Preferred Securities Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Preferred Securities Index concentrates in an industry or group of industries. As of the date of June 30, 2013, the Preferred Securities Index was concentrated in the real estate industry and the utilities sector represented a significant portion of the Preferred Securities Index.

The Preferred Securities Index is sponsored by Wells Fargo & Company, which is not affiliated with or sponsored by the Fund or the Adviser. The Index Provider determines the composition of the Preferred Securities Index and relative weightings of the securities in the Preferred Securities Index, and publishes information regarding the market value of the Preferred Securities Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Preferred Securities Risk. Preferred Securities are essentially contractual obligations that entail rights to distributions declared by the issuer's board of directors but may permit the issuer to defer or suspend distributions for a certain period of time. If the Fund owns a Preferred Security whose issuer has deferred or suspended distributions, the Fund may be required to account for the distribution that has been deferred or suspended for tax purposes, even though it

may not have received this income. Further, Preferred Securities may lose substantial value if distributions are deferred, suspended or not declared. Preferred Securities may also permit the issuer to convert Preferred Securities into the issuer's common stock. Preferred Securities that are convertible to common stock may decline in value if the common stock into which Preferred Securities may be converted declines in value. Preferred Securities are subject to greater credit risk than traditional fixed income securities because the rights of holders of Preferred Securities are subordinated to the rights of the bond and debtholders of an issuer.

Convertible Securities Risk. Convertible securities are subject to risks associated with both fixed income securities and common stocks. Depending on the convertible security's conversion value, the price of a convertible security will be influenced by interest rates (*i.e.*, its price generally will increase when interest rates fall and decrease when interest rates rise) or will tend to fluctuate directly with the price of the equity security into which the security can be converted.

Credit Risk. Preferred Securities are subject to certain risks associated with fixed income securities. Preferred Securities are subject to credit risk. Credit risk refers to the possibility that the issuer of a security will be unable and/or unwilling to make timely distributions of dividends. Preferred Securities are subject to varying degrees of credit risk which may be reflected in credit

ratings. There is a possibility that the credit rating of a Preferred Security may be downgraded after purchase, which may adversely affect the value of the security.

Interest Rate Risk. Preferred Securities are also subject to interest rate risk. Interest rate risk refers to fluctuations in the value of a Preferred Security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of Preferred Securities may go down. When the general level of interest rates goes down, the prices of Preferred Securities may go up. The historically low interest rate environment increases the risk associated with rising interest rates.

Risk of Subordinated Obligations. Payments under some Preferred Securities may be structurally subordinated to all existing and future liabilities and obligations of subsidiaries and associated companies of an issuer of Preferred Securities. Claims of creditors of such subsidiaries and associated companies will have priority as to the assets of such subsidiaries and associated companies over the issuer and the Fund, who seek to enforce Preferred Securities. Certain Preferred Securities do not contain any restrictions on the ability of the subsidiaries of the issuers to incur additional unsecured indebtedness.

Call Risk. The Fund may invest in callable Preferred Securities. If interest rates fall, it is possible that issuers of callable Preferred Securities will call (or prepay) their securities before their maturity date. If a call were exercised by the issuer during or following a period of declining interest rates, the Fund is likely to have to replace such called Preferred Security with a lower yielding security. If that were to happen, it would decrease the Fund's net investment income.

Risk of Investing in REITs. REITs are exposed to the risks specific to the real estate market as well as the risks that relate specifically to the way in which REITs are organized and operated. REITs may be subject to credit risk, interest rate risk, leverage risk and prepayment risk. REITs are subject to special U.S. federal tax requirements. A REIT's failure to comply with these requirements may negatively affect its performance. REITs may be dependent upon management skills and may have limited financial resources.

Risk of Investing in the Real Estate Industry. Companies in the real estate industry include companies that invest in real estate, such as REITs and real estate management and development companies. Because as currently constituted the Preferred Securities Index is concentrated in the real estate industry, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the real estate industry. Real estate is highly sensitive to general and local economic conditions and developments, and characterized by intense competition and periodic overbuilding. Adverse economic, business or political developments affecting real estate could have an effect on the value of the Fund's investments.

Risks of Investing in the Utilities Sector. The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Preferred Securities Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size,

the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small-capitalization and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Index Tracking Risk. The Fund's return may not match the return of the Preferred Securities Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Preferred Securities Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Preferred Securities Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored into the return of the Preferred Securities Index, the Fund's return may deviate significantly from the return of the Preferred Securities Index. In addition, the Fund may not be able to invest in certain securities

included in the Preferred Securities Index, or invest in them in the exact proportions in which they are represented in the Preferred Securities Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Preferred Securities Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Preferred Securities Index is not based on fair value prices), the Fund's ability to track the Preferred Securities Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Preferred Securities Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Index, the Fund's assets are concentrated in the real estate industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The Fund commenced operations on July 16, 2012 and therefore does not have a performance history for a full calendar year. Visit www.marketvectorsetfs.com for current performance figures.

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	July 2012
George Cao	Portfolio Manager	July 2012

PURCHASE AND SALE OF FUND SHARES

The Fund issues and redeems Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are expected to be approved for listing, subject to notice of issuance, on NYSE Arca, Inc. (NYSE Arca) and because Shares will trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.
