Media Release

Syngenta donates genomics seed collection to public research

Basel, Switzerland, 27 May 2004

Syngenta announced today that it has donated a substantial portion of its *arabidopsis* functional genomics seed collection to the Arabidopsis Biological Resource Center (ABRC) hosted at The Ohio State University, USA. The ABRC will distribute the collection of approximately 48,000 seed lines in collaboration with the Nottingham Arabidopsis Stock Centre in Nottingham, UK. Syngenta is also making the sequence information universally available by placing it into the international gene database GenBank. The collection will be available in late-May.

Arabidopsis thaliana, a small flowering plant, was the first plant to have its genome fully sequenced. Its small genome and short life cycle make it a model organism for research into plant characteristics and the genes that control them, even though *arabidopsis* itself has no agricultural uses.

□ Arabidopsis is a highly important reference plant for genetic research; the arabidopsis collection therefore is an important tool in developing our understanding of plants, and David Lawrence, Head of Research and Technology at Syngenta. This knowledge will support the development of innovative new agricultural technologies that can help improve food production.

 \Box This resource will greatly enhance public research, \Box said Randy Scholl, Director of the ABRC. \Box The donation contains novel seeds that we currently do not have in our collection. It will improve our understanding of how individual genes can influence a plant \Box s growth. \Box

Edgar Filing: SYNGENTA AG - Form 6-K

Syngenta is a world-leading agribusiness committed to sustainable agriculture through innovative research and technology. The company is a leader in crop protection, and ranks third in the high-value commercial seeds market. Sales in 2003 were approximately \$6.6 billion. Syngenta employs some 19,000 people in over 90 countries. Syngenta is listed on the Swiss stock exchange (SYNN) and in New York (SYT). Further information is available at www.syngenta.com.

The Arabidopsis Biological Resource Center (ABRC) was established at The Ohio State University in September 1991. Primary support of the ABRC is from a National Science Foundation grant. The mission of the ABRC is to provide collection, preservation and distribution of *Arabidopsis* seeds and related plant materials.
