EMERGING MARKETS INCOME FUND INC

Form N-30D

May 08, 2001

The Emerging Markets
Income Fund Inc

April 17, 2001

Dear Shareholders:

We are pleased to provide this semi-annual report for The Emerging Markets Income Fund Inc ("Fund") for the period ended February 28, 2001. Included in this report is an analysis of the Fund's performance versus the benchmark, a commentary on emerging markets debt, a statement of the Fund's investments as of February 28, 2001 and unaudited financial statements for the six months ended February 28, 2001.

We are proud to report that our director, Charles Barber was named Fund Trustee of the Year in March 2001 by Fund Directions, a publication of Institutional Investor, Inc. According to the article, Mr. Barber received this honor for his "tireless efforts as a vigilant representative of shareholder interests."

During the six months ended February 28, 2001, the net asset value ("NAV")¹ of the Fund decreased from \$14.01 per share at August 31, 2000 to \$13.33 per share as of February 28, 2001. Dividends of \$0.825 per share from net investment income were paid during this period. Assuming reinvestment of these dividends in additional shares of the Fund, the total rate of return based on NAV for the six months ended February 28, 2001 was 1.34%. In comparison, the J.P. Morgan Emerging Markets Bond Index Plus ("EMBI+")², a standard measure of return for the emerging markets debt returned 3.78%.

As of February 28, 2001, the Fund, as a percentage of total investments, was approximately 98% invested in securities of emerging market issuers, including obligations of sovereign governments and companies. The balance of the Fund's assets was invested in short-term investments.

Emerging Markets Debt Securities

Emerging markets debt returned 3.78% for the period ended February 28, 2001, as measured by the EMBI+. Performance of emerging markets debt was mixed throughout the period even though nine countries out of a total of seventeen in the EMBI+ managed to perform better than the EMBI+. This is significant by historical standards, but the positive tone created in earlier periods was dampened due to Turkey's banking crisis. Turkey returned negative 15.42% for the period. Technical factors did, however, remain strong, and this helped the asset class decouple from other risk oriented markets as it outperformed most financial assets, especially U.S. and European high-yield bonds and global equities for the period.

The inflationary bias of the U.S. Federal Reserve Board ("Fed") in effect through November 2000 had driven interest rates to 6.50%. More recently, the market received a boost as the Fed changed its

¹ The NAV is calculated by subtracting total liabilities from the closing value of all securities held by the Fund (plus all other assets) and dividing the result (total net assets) by the total number of shares outstanding. The NAV fluctuates with the changes in the market price of the securities in which the Fund has invested. However, the price at which an investor buys or sells shares of the Fund is its market (NYSE) price as determined by supply and

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

demand.

2 The EMBI+ is a total return index that tracks the traded market for U.S. dollar-denominated Brady and other similar sovereign restructured bonds traded in the emerging markets. Please note an investor cannot invest directly in an index.

Page 1

T H E E M E R G I N G M A R K E T S I N C O M E F U N D I N C

focus on the U.S. economy from inflation to weakness and commenced easing interest rates in January. The Fed cut interest rates twice, January 3, and January 31, 2001, for a total of 100 basis points³, bringing interest rates to 5.50%. On March 20, 2001, the Fed cut interest rates by an additional 50 basis points, in addition to the January interest rate cuts. In our view, the Fed's changing bias was caused by evidence that U.S. economic growth has slowed considerably in recent months.

Oil prices, an important driver of value in the emerging markets debt, continue to remain at high levels. Fiscal balances and monetary reserves improved substantially as rising oil prices contributed to overall credit quality in Russia, Venezuela, Algeria, Colombia and Mexico, all oil producers. Prices fluctuated during the period, ranging from a low of \$24.72 per barrel to a high of \$32.97. Oil prices closed the period at \$27.50. We think stable or slightly weaker oil prices will be a modest benefit for the oil importers, without significantly undermining the very strong external and fiscal performance of the major oil exporters.

Return volatility⁴ for emerging markets debt remained substantially below historical levels. However, the combination of the Turkish and Argentinean financial and political crises in January and February registered an upward spike in volatility. We believe that this will normalize as the year progresses. (Of course, no guarantees can be given that our expectations will be met.)

The following is a brief description of developments in key countries over the past months.

Ecuador

Ecuador, the top performer in the EMBI+ index, returned 19.83% for the period. Eight additional countries outperformed the EMBI+ during the period. Ecuador completed its debt restructuring of defaulted Brady bonds⁵, exchanging them for two issues of global bonds during the period. The relatively fast resolution of this Brady bond default surprised the market and drove Ecuador's returns. In addition, the Paris Club⁶ granted Ecuador a standard rescheduling of US\$880 million of bilateral debt. We believe that Ecuador continues to face a number of economic and political challenges. President Noboa has developed a good working relationship with the International Monetary Fund ("IMF")⁷, an important factor that has been missing in recent years. In our opinion, Ecuador's budget forecasts seem realistic, and are not based on sustained high oil prices. Yet, we believe the country still needs comprehensive tax reforms to improve its overall fiscal health.

Venezuela

Venezuela returned 6.01% for the period, as measured by the EMBI+. Oil price strength also continues to drive the Venezuelan economy as fiscal and external accounts have shown marked improvement on year earlier levels. A clear measure of the positive impact that rising oil prices have had on Venezuelan credit quality is the level of international reserves. The stock of international

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

reserves, approximately \$23 billion, exceeds the stock of external debt. One further promising figure for 2000 was the lowest reported inflation figure in fourteen years, 13.4%, down from 20% in 1999. We believe the country continues to be an attractive credit at current spread levels, trading at approximately 130 basis points over the EMBI+.

- 3 A basis point is 0.01%, or one one-hundredth of a percent.
- 4 Return volatility is the standard deviation of monthly returns over the period being measured.
- 5 Brady bonds are public issues, U.S. dollar denominated bonds of developing countries, mainly Latin America, that were exchanged, in a restructuring, for commercial bank loans in default.
- 6 The Paris Club is the official group of sovereign lenders who have extended credit to sovereign governments.
- 7 The IMF is an international organization of 183 member countries, established to promote international monetary cooperation, exchange stability, and orderly exchange arrangements.

Page 2

T H E E M E R G I N G M A R K E T S I N C O M E F U N D I N C

Mexico

Mexico returned 4.63% for the period as measured by the EMBI+. Mexico continues to reap the rewards of foreign fund flows since it was upgraded to investment-grade⁸ by Moody's Investors Service, Inc. in March 2000. The period was dominated by political events as Vincente Fox was sworn in as president and completed the formation of his cabinet. In our opinion, the appointment of Gil Diaz as minister of finance was especially well received by the market. We also believe that the Mexican economy benefited from rising oil prices as reflected in its overall levels of growth and fiscal strength. Mexico's progress and its sound fundamentals have been widely recognized by the market. Mexican debt, with spreads⁹ at 415 basis points currently trades approximately 350 basis points tight to the EMBI+.

Brazil

Brazil returned 4.07% for the period as measured by the EMBI+. In our view, Brazilian government officials have made substantial progress in dealing with the country's debt problems and this continues to be at the core of Brazil's solid success. We believe Brazil remains a likely Standard and Poor's Investor Service upgrade candidate in 2001. In our opinion, low inflation, continued growth and moderating oil prices should enable Brazil to continue to improve its credit quality.

Russia

Russia returned a disappointing 0.82% for the period, as measured by the EMBI+. Russian performance was hurt in the fourth quarter of 2000 as many investors sought higher quality credits amidst growing concerns about the pace of worldwide economic growth. Investment grade credits in countries such as Poland and South Korea, which returned 10.04% and 7.98%, respectively, for the period, outperformed the EMBI+. As mentioned earlier, sustained high oil prices drove Russia's economy earlier in the year and every \$1 increase in the price of oil reportedly increases Russia's annual export revenues by approximately \$1 billion. Russia's hard currency reserves doubled from 1999 levels to end the year in excess of \$26 billion. We believe that this reserve position substantially strengthens Russia's credit quality. The Russian Federation

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

Council approved the 2001 Budget in the fourth quarter of 2001. The Budget is considered conservative and we believe the London Club¹⁰ financing received in August makes Russia's 2001 debt service obligations very manageable. In addition, as reported, Russia recently agreed to service their Paris Club debt with scheduled payments due to commence in April 2001.

Turkey

Turkey was the worst performer in the index for the period, returning a negative 15.42% as measured by the EMBI+. The November banking crisis became a full-scale balance of payments crisis for Turkey. This February, the IMF granted the Turkish treasury a US\$1.4 billion injection to restore confidence in the banking sector. Political disagreements between the Turkish president and the prime minister have contributed to the severity of the crisis. We believe that the potential for negative political surprises has not disappeared and the political situation remains unpredictable. We will continue to monitor developments in Turkey. As of February 28, 2001, we had no exposure to Turkish debt in the Fund.

8 Investment-grade bonds are those rated Aaa, Aa, A and Baa by Moody's Investors Service, Inc. or AAA, AA, A and BBB by Standard & Poor's Rating Service, or that have an equivalent rating by any nationally recognized statistical rating organization, or are determined by the portfolio manager to be of equivalent quality.

9 Spread is the difference between yields on securities of the same quality but different maturities or the difference between yields on securities of the same maturity but different quality.

10 The London Club is the official group of creditors lending to emerging market governments.

Page 3

T H E E M E R G I N G M A R K E T S I N C O M E F U N D I N C

Outlook

The market for emerging markets debt closed the reporting period with spreads at 748 basis points over U.S. Treasuries, 110 basis points wider from September levels. Emerging markets debt has come under pressure with the industrial economic slowdown, the poor performance of the equity markets and the spike in volatility in Turkey and Argentina.

Annual Shareholders Meeting

The Fund held its annual shareholders meeting on December 19, 2000. At the meeting, shareholders elected each of the nominees proposed for election to the Fund's Board of Directors and ratified the selection of PricewaterhouseCoopers LLP as the independent accountants of the Fund. The following table provides information concerning the matters voted on at the meeting.

1. Election of Directors

Nominees -----	Votes For -----	Votes Withheld -----
Jeswald W. Salacuse	3,391,673	2,233
Riordan Roett	3,391,673	2,233

2. Ratification of PricewaterhouseCoopers LLP as the Independent Accountants of

Notes to Financial Statements (unaudited)

1. Organization and Significant Accounting Policies

The Emerging Markets Income Fund Inc (the "Fund") was incorporated in Maryland on July 30, 1992 and is registered as a non-diversified, closed-end, management investment company under the Investment Company Act of 1940, as amended. The Board of Directors authorized 100 million shares of \$.001 par value

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

common stock. The Fund's primary investment objective is to seek high current income through investments in selected debt securities of emerging market countries. As a secondary objective, the Fund seeks capital appreciation.

The following is a summary of significant accounting policies consistently followed by the Fund in the preparation of its financial statements. The policies are in conformity with generally accepted accounting principles ("GAAP"). The preparation of financial statements in accordance with GAAP requires management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results may differ from those estimates.

(a) Securities valuation. In valuing the Fund's assets, all securities for which market quotations are readily available are valued (i) at the last sale price prior to the time of determination if there was a sale on the date of determination, (ii) at the mean between the last current bid and asked prices if there was no sales price on such date and bid and asked quotations are available, and (iii) at the bid price if there was no sales price on such date and only bid quotations are available. Publicly traded foreign government debt securities are typically traded internationally in the over-the-counter market, and are valued at the mean between the last current bid and asked price as of the close of business of that market. However, where the spread between bid and asked price exceeds five percent of the par value of the security, the security is valued at the bid price. Securities may also be valued by independent pricing services which use prices provided by market-makers or estimates of market values obtained from yield data relating to instruments or securities with similar characteristics. Short-term investments having a maturity of 60 days or less are valued at amortized cost, unless the Board of Directors determines that such valuation does not constitute fair value. Securities for which reliable quotations are not readily available and all other securities and assets are valued at fair value as determined in good faith by, or under procedures established by, the Board of Directors.

(b) Securities transactions and investment income. Securities transactions are recorded on the trade date. Interest income is accrued on a daily basis. Discount on securities purchased is accreted on an effective yield basis over the life of the security. The Fund uses the specific identification method for determining realized gain or loss on investments sold.

(c) Foreign currency translation. The books and records of the Fund are maintained in U.S. dollars. Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollar amounts at the date of valuation using the 12:00 noon rate of exchange reported by Reuters. Purchases and sales of portfolio securities and income and expense items denominated in foreign currencies are translated into U.S. dollars at rates of exchange prevailing on the respective dates of such transactions. Net realized gains and losses on foreign currency transactions represent net gains and losses from sales and maturities of forward currency contracts, disposition of foreign currencies, currency gains and losses realized between the trade and settlement dates on securities transactions and the difference between the amount of income accrued and the U.S. dollar equivalent amount actually received. The Fund does not isolate that portion of gains and losses on investments which is due to changes in foreign exchange rates from that which is due to changes in market prices of the securities. Such fluctuations are included with the net realized and unrealized gain or loss from investments.

Notes to Financial Statements (unaudited) (continued)

1. Organization and Significant Accounting Policies (continued)

However, pursuant to U.S. federal income tax regulations, certain net foreign exchange gains/losses included in realized gain/loss are included in or are a reduction of ordinary income for federal income tax purposes.

(d) Federal income taxes. It is the Fund's intention to continue to meet the requirements of the Internal Revenue Code applicable to regulated investment companies and to distribute substantially all of its taxable income and capital gains, if any, to its shareholders. Therefore, no federal income tax or excise tax provision is required.

(e) Repurchase agreements. When entering into repurchase agreements, it is the Fund's policy to take possession, through its custodian, of the underlying collateral and to monitor its value at the time the arrangement is entered into and during the term of the repurchase agreement to ensure that it equals or exceeds the repurchase price. In the event of default of the obligation to repurchase, the Fund has the right to liquidate the collateral and apply the proceeds in satisfaction of the obligation. Under certain circumstances, in the event of default or bankruptcy by the other party to the agreement, realization and/or retention of the collateral may be subject to legal proceedings.

(f) Distribution of income and gains. The Fund declares and pays dividend to shareholders quarterly from net investment income. Net realized gains, if any, in excess of loss carryovers are expected to be distributed annually. Dividends and distributions to shareholders are recorded on the ex-dividend date. The amount of dividends and distributions from net investment income and net realized gains are determined in accordance with federal income tax regulations, which may differ from GAAP due primarily to differences in the treatment of foreign currency gains/losses and deferral of wash sales and post-October losses incurred by the Fund. These "book/tax" differences are either considered temporary or permanent in nature. To the extent these differences are permanent in nature, such amounts are reclassified within the capital accounts based on their federal income tax basis treatment; temporary differences do not require reclassification. Dividends and distributions which exceed net investment income and net realized capital gains for financial reporting purposes but not for tax purposes are reported as distributions in excess of net investment income or distributions in excess of net realized capital gains. To the extent they exceed net investment income and net realized capital gains for tax purposes, they are reported as tax return of capital.

(g) Forward foreign currency contracts. A forward foreign currency contract is a commitment to purchase or sell a foreign currency at a future date at a negotiated forward rate. The contract is marked-to-market to reflect the change in the currency exchange rate. The change in market value is recorded by the Fund as an unrealized gain or loss. The Fund records a realized gain or loss on delivery of the currency or at the time the forward contract is extinguished (compensated) by entering into a closing transaction prior to delivery. This gain or loss, if any, is included in net realized gain (loss) on foreign currency transactions.

(h) Option contracts. When the Fund writes or purchases a call or a put option, an amount equal to the premium received or paid by the Fund is recorded as a liability or asset, the value of which is marked-to-market to

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

reflect the current market value of the option. When the option

Page 13

Notes to Financial Statements (unaudited) (continued)

1. Organization and Significant Accounting Policies (concluded)

expires, the Fund realizes a gain or loss equal to the amount of the premium received or paid. When the Fund enters into a closing transaction by purchasing or selling an offsetting option, it realizes a gain or loss without regard to any unrealized gain or loss on the underlying security. When a written call option is exercised, the Fund realizes a gain or loss from the sale of the underlying security and the proceeds from such sale are increased by the premium originally received on the option. If a written put option is exercised, the amount of the premium received reduces the cost of the security that the Fund purchased upon exercise of the option.

(i) Cash flow information. The Fund invests in securities and distributes dividends from net investment income and net realized gains from investment transactions which are paid in cash. These activities are reported in the Statement of Changes in Net Assets. Additional information on cash receipts and cash payments is presented in the Statement of Cash Flows. For the six months ended February 28, 2001, the Fund paid interest expense of \$895,020.

2. Management and Advisory Fees and Other Transactions

The Fund has entered into a management agreement with Salomon Brothers Asset Management Inc (the "Investment Manager"), a wholly owned subsidiary of Salomon Smith Barney Holdings Inc. ("SSBH"). The Investment Manager is responsible for the day-to-day management of the Fund's investment portfolio as well as providing certain clerical services relating to the Fund's operations, maintenance of the Fund's records, preparation of reports and supervision of the Fund's arrangements with its custodian and transfer and dividend paying agent. The management fee for these services is payable monthly at an annual rate of 0.70% of the Fund's average weekly net assets.

The Fund has also entered into an investment advisory agreement with PIMCO Advisors L.P. (the "Investment Adviser") to provide financial, economic and political advice concerning emerging market countries and also, as appropriate, to be involved in aiding the process of emerging market country selection. The advisory fee for these services is payable monthly at an annual rate of 0.50% of the Fund's average weekly net assets.

At February 28, 2001, the Investment Manager owned 5,562 shares of the Fund. Certain officers and/or directors of the Fund are officers and/or directors of the Investment Manager or the Investment Adviser.

All officers and two directors of the Fund are employees of the Investment Manager and/or the Investment Adviser.

3. Portfolio Activity and Tax Information

Cost of purchases and proceeds from sales of securities, excluding short-term investments, for the six months ended February 28, 2001 aggregated \$60,866,655 and \$64,990,871 respectively. The federal income tax cost basis of the Fund's investments at February 28, 2001 was substantially the same as the

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

cost basis for financial reporting. Gross unrealized appreciation and depreciation amounted to \$4,043,495 and \$4,366,181, respectively, resulting in a net unrealized depreciation on investments of \$322,686.

	Total Written Put Options			
	(Premium received -- \$223,440)			\$ (205,
				=====

4. Bank Loan

The Fund has borrowed \$20,000,000 pursuant to a secured loan agreement (the "Loan Agreement") with ING Baring (U.S.) Capital LLC. The interest rate on the loan is 8.45% and the maturity date is May 21, 2001. The collateral for the loan was valued at \$61,508,114 on February 28, 2001 and is being held in a segregated account by the Fund's custodian. In accordance with the terms of the Loan Agreement, the Fund must maintain a level of collateral to debt of not less than 300%.

5. Loan Participations/Assignments

The Fund invests in fixed and floating rate loans arranged through private negotiations between a foreign sovereign entity and one or more financial institutions ("lenders"). The Fund's investment in any such loan may be in the form of a participation in or an assignment of the loan. The market value of the

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

Fund's loan participations at February 28, 2001 was \$3,497,199.

In connection with purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Fund may not benefit directly from any collateral supporting the loan in which it has purchased the participation. As a result, the Fund will assume the credit risk of both the borrower and the lender that is selling the participation. In the event of insolvency of the lender selling the participation, the Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

When the Fund purchases assignments from lenders, the Fund will acquire direct rights against the borrower on the loan, except that under certain circumstances such rights may be more limited than those held by the assigning lender.

6. "When and If " Issued Bonds

"When and if " issued bonds are recorded as investments in the Fund's portfolio and marked-to-market to reflect the current value of the bonds. When the Fund sells a "when and if " issued bond, an unrealized gain or loss is recorded equal to the difference between the selling price and purchase

Page 15

T H E E M E R G I N G M A R K E T S I N C O M E F U N D I N C

Notes to Financial Statements (unaudited) (concluded)

6. "When and If " Issued Bonds (continued)

cost of the bond. Settlement of trades (i.e., receipt and delivery) of the "when and if " issued bond is contingent upon the successful issuance of such bond. In the event its sponsor is unable to successfully issue the security, all trades in "when and if " issued bonds become null and void, and, accordingly, the Fund will reverse any gain or loss recorded on such transactions.

7. Credit and Market Risk

The yields of emerging market debt obligations reflect, among other things, perceived credit risk. The Fund's investment in securities rated below investment grade typically involves risks not associated with higher rated securities including, among others, overall greater risk of timely and ultimate payment of interest and principal, greater market price volatility and less liquid secondary market trading. The consequences of political, social, economic or diplomatic changes may have disruptive effects on the market prices of investments held by the Fund. The Fund's investment in non-dollar-denominated securities may also result in foreign currency losses caused by devaluations and exchange rate fluctuations. At February 28, 2001, the Fund has a concentration risk in sovereign debt of emerging market countries.

The net asset value of the Fund could be negatively affected if the Fund were required to liquidate assets in other than an orderly manner and/or in adverse market conditions to repay any bank loans outstanding.

8. Financial Instruments with Off-Balance Sheet Risk

The Fund enters into forward foreign currency contracts ("forward contracts") to facilitate settlement of foreign currency denominated portfolio

Edgar Filing: EMERGING MARKETS INCOME FUND INC - Form N-30D

transactions or to manage foreign currency exposure associated with foreign currency denominated securities. Forward contracts involve elements of market risk in excess of the amount reflected in the Statement of Assets and Liabilities. The Fund bears the risk of an unfavorable change in the foreign exchange rate underlying the forward contract. Risks may also arise upon entering into these contracts from the potential inability of the counterparties to meet the terms of their contracts. As of February 28, 2001, the Fund has no outstanding forward contracts.

A risk in writing a covered call option is that the Fund may forego the opportunity of profit if the market price of the underlying security increases and the option is exercised. A risk in writing a put option is that the Fund may incur a loss if the market price of the underlying security decreases and the option is exercised. In addition, there is the risk that the Fund may not be able to enter into a closing transaction because of an illiquid secondary market.

9. Dividend Subsequent to February 28, 2001

On March 1, 2001, the Board of Directors of the Fund declared a dividend of \$0.4125 per share, from net investment income, payable on March 30, 2001 to shareholders of record March 13, 2001.

10. Capital Loss Carryforward

At August 31, 2000, the Fund had, for Federal income tax purposes, a capital loss carryforward of approximately \$3,667,000, available to offset future capital gains through August 31, 2007. To the extent that these carryforward losses are used to offset capital gains, it is probable that any gains so offset will not be distributed.
